Certified Sanborn® Map Report

11/06/21

Site Name:

Corona Site 2
410 S. Main Street
Corona, CA 92882
EDR Inquiry # 6738740.3

Client Name:

EEC
One City Boulevard West, Suite 1800
Orange, CA 92868
Contact: Laura Holder

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by EEC were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

www.edrnet.com

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Dear Requestor:

We have received your Public Records Act Request from the Department of Toxic Substances Control (DTSC). After a thorough review of our files, no site records were found pertaining to the sites/facilities referenced above.

A large number of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs Data Management System. It tracks our cleanup, permitting, enforcement and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at 714-4845337 or via email at CypressFileRoom@dtsc.ca.gov.

Sincerely,

Julie Johnson

Dear Laura Holder,

The City of Corona, City Clerk's Office acknowledges your Public Records Act Request received on 11/5/2021 1:29 PM . The following information has been requested:

Hello,

I am performing a Phase I ESA and would like to see if the Fire Department has any Hazardous Materials records or incident records related to chemical spills or illegal dumping at:

410 S. Main Street
332 S. Washburn Avenue
323 S. Belle Avenue

I also would like to see if the building department has records dated earlier than the permits that are available online, or if I need to contact the County for those.

Thank you in advance for your help,

Sincerely, Laura Holder

Pursuant to California Records Act (Government Code Section 6250 et seq., (the "Act") the City has gathered the documents responsive to your request.

The responsive document is attached. Per the City of Corona Planning and Development Department, there are no permits found in Questy's or microfilm prior to 1990 for 410 S. Main Street and 332 S. Washburn Avenue.

Per the City of Corona Fire Department, there are no responsive documents.

If you have any questions, please feel free to contact the City Clerk's Office at (951) 736-2201 or via email: CityClerk@CoronaCa.Gov

Sincerely,

Kristian Duarte, CMC, CPMC

§ 3800. Permit requirements; certificate of insurance or consent to self-insure; exclusions

Every county or city which requires the issuance of a permit as a condition precedent to the construction, alteration, improvement, demolition or repair of any building or structure shall require that each applicant for such permit have on file or file

(1) A certificate of consent to self-insure issued by the Director of Industrial Relations, or

(2) A certificate of workmen's compensation insurance issued by an admitted insurer, or

(3) An exact copy or duplicate thereof certified by the director or the insurer.

The certificate of insurance shall state that there is in existence a valid policy of workmen's compensation insurance in a form approved by the Insurance Commissioner. The certificate shall show the expiration date of the policy. No insurer shall issue such certificate unless the full deposit premium on the policy has been paid, and the insurer shall give the county or city at least 10 days' advance notice of the cancellation of the policy.

This section shall not apply if

(1) The permit is for one hundred dollars ($100) or less, or

(2) The applicant for the permit signs a certificate which reads as follows, or the wording of which has been approved by the Director of Industrial Relations:

"I certify that in the performance of the work for which this permit is issued I shall not employ any person in any manner so as to become subject to the workmen's compensation laws of California."

If, after making such certificate, the applicant for the permit should become subject to the workmen's compensation provisions of this code, he shall forthwith comply with the provisions of Section 3700 or his permit shall be deemed revoked.

(Added by Stats.1941, c. 1010, p. 2642, § 1. Amended by Stats.1945, c. 1431, p. 2696, § 69.5; Stats.1953, c. 552, p. 1811, § 1; Stats.1959, c. 361, p. 2251, § 1; Stats.1963, c. 1140, p. 2616, § 2.)

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL ---------- National Priority List Deletions

Federal CERCLIS list

FEDERAL FACILITY ---------- Federal Facility Site Information listing

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially

hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2021 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 11 ENVIROSTOR sites within approximately 1 mile of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 3 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 07/22/2021 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 16 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Database: MINES VIOLATIONS, Date of Government Version: 06/30/2021				

ABANDONED MINES: An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

A review of the ABANDONED MINES list, as provided by EDR, and dated 06/15/2021 has revealed that there is 1 ABANDONED MINES site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 12 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
AMERICAN DRY CLEANER	425 S CORONA MALL	ESE 0 - 1/8 (0.074 mi.)	15	76
AMERICAN DRY CLEANER	312 W 6TH ST 197	SSW 0 - 1/8 (0.122 mi.)	E35	106

Lower Elevation	Address	Direction / Distance	Map ID	Page
AMERICAN DRIVE THRU	310 S MAIN ST	NE 0 - 1/8 (0.038 mi.)	A4	18

EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 3 records.

Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain

Case Type:	LUST Cleanup Site
Geo Track:	http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T10000000645
Global Id:	T10000000645
Latitude:	33.8781474786847
Longitude:	-117.565630674362
Status:	Completed - Case Closed
Status Date:	03/29/2010
Case Worker:	YR
RB Case Number:	Not reported
Local Agency:	RIVERSIDE COUNTY LOP
File Location:	Local Agency Warehouse
Local Case Number:	200828072
Potential Media Affect:	Soil
Potential Contaminants of Concern:	Gasoline
Site History:	Release Information: In October 2008, soil samples were collected during dispenser upgrade activities. Twenty-one (21) soil samples were collected from beneath the dispensers and piping at a depth of approximately four feet below ground surface (bgs). TPHg was detected in two soil samples at a maximum concentration of 1.5 ppm. MTBE was detected in 17 of the 21 soil samples at a maximum concentration of 0.033ppm. BTEX and other fuel oxygenates were not detected in any of the soil samples. Total lead concentrations ranged from 9.5 to 52 ppm. Based on analytical results an Unauthorized Release Report (URR) was submitted on October 21, 2008. RCDEH entered the site into LOP on December 29, 2009 for further assessment. Assessment/Verification: Five soil borings (B-5 through B-9) were advanced on April 17 to 24, 2009, to depths of 40.5 to 41 feet bgs. One soil boring was advanced adjacent to each of the dispenser islands, and boring B-9 was advanced at the location of the previous UST locations. Boring B-7 was continuously cored for detailed logging. TPHg was detected in the 5 foot soil samples from soil borings B-6 and B-9 at concentrations of 0.89 ppm and 26 ppm, respectively. TPHg was not detected in any other soil sample. BTEX and fuel oxygenates were not detected in any soil samples, except MTBE was detected in boring B-9 at 5 feet at a concentration of 0.0055 ppm. Other VOCs were not detected in any of the soil samples. Analysis of the 5 foot soil sample from B-9 for total lead showed a concentration of 14 ppm.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Status: Completed - Case Closed
Status Date: 08/18/2010
Case Worker: SCB
RB Case Number: 083303259T
Local Agency: RIVERSIDE COUNTY LOP
File Location: Local Agency
Local Case Number: 9814582
Potential Media Affect: Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern: Gasoline
Site History: Data prior to 2005 not uploaded to GeoTracker. See case file. Assessment - September 1998 Two 10,000 gal gasoline and one 10,000 gal diesel USTs removed. Impacted soil was detected under the USTs and piping with maximum concentrations of: 12,729 ppm TPHg, 347 ppm TPHd, 120.6 ppm Benzene, 783.422 ppm Toluene, 276 ppm Ethylbenzene, 751.99 ppm Xylenes, and 903.5 ppm MTBE. May 2000 to October 2002 Six soil borings were completed and three multi-completion vapor

PALM SPRINGS OIL #6 (Continued) **1000294437**

extraction/groundwater monitoring wells, three vapor extraction wells and one vapor probe were installed. Highest soil concentrations were located south of the USTs: 8400 ppm TPHg (MW-1-55 ft), 65 ppm B (VW-1-55 ft), 310 ppm T (MW-1-55 ft), 150 ppm E (VW-1-55 ft), 590 ppm X (MW-1-55 ft), 100 ppm MTBE (VW-1-40 ft). Remediation October 1998 277.57 tons of impacted soils were excavated and removed from the site. January 2001 A soil vapor extraction (SVE) pilot test was completed. The shallow soils (34 to 54 feet below ground surface (bgs)) had a radius of influence of 10 feet and the deeper soils (60 to 80 ft bgs) had a radius of influence of 40 ft. Maximum vapor concentrations included: 20,070 ppmV TPHg (deep), 228 ppmV B (deep), 111 ppmV T (deep), 11.5 ppmV E (deep), 30 ppmV X (shallow), and 1,067 ppmV MTBE (shallow). Mass removal rates for TPHg were: 57.54 lb/day (shallow) and 61.32 lb/day (deep). April 2002 to September 2003 SVE system was operated continuously using up to 12 SVE wells. Initial vapor concentrations: 5644 ppmV TPHg, 110 ppmV B, 120 ppmV T, 13.5 ppmV E, 42.8 ppmV X, and 89 ppmV MTBE. September 2003 to May 2007 Discontinuous SVE operations were conducted including various system cycling and rebound testing events. Total number of days of SVE operation: 1017 days Total mass recovered: 14954 lb TPHg, 24 lb B, 624 lb T, 210 lb E, 1050 lb X, and 16.83 lb MTBE. Groundwater Six groundwater (GW) monitoring wells were installed at this site. Depth to GW has ranged ~110 ft bgs to ~128 ft bgs and the flow direction has ranged from west to east, but predominantly northeast to northwest. GW impacts were detected in MW-1 during the first two sampling events at maximum concentrations of 2412 ppb TPHg, 187 ppb B, 226 ppb T, 25 ppb E, 243 ppb X, and 426 ppb MTBE. This well was sampled two additional times prior to going dry and all constituents were below the detection limits for both sampling events except 20 ppb MTBE. For seven quarters, wells MW-2 and MW-3 were ND for all constituents testing. Since October 2002, the wells have been dry and unable to be sampled. Wells MW-4, MW-5 and MW-6 were installed in October 2002 and have been sampled quarterly since this time. There have not been any detections in any of these three wells since sampling was initiated. Verification June 2007 Formal SVE rebound testing was conducted. The highest individual well vapor concentrations were: 175 ppmV TPHg, ND B, 8.5 ppmV T, 3.53 ppmV E, 15.3 ppmV X, and ND MTBE. Final mass removal rates for the influent vapor stream were: 5.75 lb/day TPHg, and 0 to <0.6 lb/day BTXE & MTBE. July 2007 Four confirmation soil borings were drilled to verify subsurface conditions. Three were drilled to 80 ft bgs and one was drilled to 125 ft bgs. Impacted soils were detected between 50 and 60 ft bgs in two of the borings (CB-2 and CB-3). Maximum concentrations included: 2230 ppm TPHg (CB-2-55'), ND B, 445 ppm T (CB-2-55'), 201 ppm E (CB-2-55'), 1550 ppm X (CB-2-55'), ND MTBE. August and September 2007 - SVE operated an additional 33 days and removed 277 lbs TPHg, 6.83 lb T, 3.54 lb E, 15.69 lb X were recovered. (No Benzene or MTBE was recovered during this time.) Subsurface Soil types: The uppermost unit from surface to 180 ft bgs is high clay content silts with lesser amounts of fine- to coarse-grained sand. This unit grades laterally and vertically into relatively clay-free sandand silty sand between 60 and 95 ft bgs. The second unit between approximately 95 and 130 ft bgs consists predominantly of sand and gravel with some fines. Other information: UST system currently installed and operating at the site. The piping and dispensers were replaced in June 2006 and the leak has been stopped. The site has been adequately characterized. Residual impacts remain at the site

PALM SPRINGS OIL #6 (Continued) **1000294437**

between 50 and 60 ft bgs in the soils south of the USTs (CB-2 and CB-3). The consultant concludes that the impacts are limited to a lens of low permeability silty clay within a larger sand unit and do not pose a threat to groundwater. No water wells, surface waters, or other sensitive receptors are likely to be impacted. RCDEH issued a letter requiring proper destruction of all existing wells and a site closure letter on 8/18/10. Documentation of well destructions to be submitted by 11/30/2010. As of 06/07/2012 - documentation for destruction of the wells has not been submitted to Riverside County Environmental Health. The County still requires the wells be abandoned propertly and documentation sent to our office. All monitoring and remediation wells destroyed in Aug 2014. RCDHE issued final no further action letter December 19 2014.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Contaminants of Concern: Diesel
Site History: Fieldstone Communities, the developer of the subject site, discovered

PRIVATE RESIDENCE (Continued) **S110654960**

a concrete tank when they developed lot 41. The UST extended the length of the property and extended beyond the property to the north onto Radcliffe Circle and to the south onto Taber Street. The UST was apparently used to store fuel for the smudge pots in the former orange groves. The UST was found to contain debris and diesel affected soil. The contents of the UST within the Lot 41 property boundary were removed in December 2001. Two soil samples were collected from the stockpile of the affected soil. Total petroleum hydrocarbons (TPH)-diesel was detected at a concentration up to 6040 mg/kg. The concrete walls of the UST were removed to a depth of two to four feet below grade within the limits of Lot 41. The excavation work was not extended into the street or the easement between Lot 41 and Radcliffe Circle and Lot 41 and Taber Street. Elevated concentrations of petroleum hydrocarbons were detected in the soil and debris within the portion of the UST that exists beyond the property. TPH-diesel was detected at a concentration as high as 22,900 mg/kg. Soil samples were also collected through holes punched through the concrete floor of the UST. TPH-diesel was only detected at a moderate concentration in one sample near the northern end of the property. In response to these findings, Fieldstone Communities requested closure of remedial activities on the lot 41 property and Fieldstone stated that any further remedial work on the remaining UST and affected soil that exists on Radcliffe Avenue and the adjacent easement is the responsibility of the City of Corona. We did not grant site closure because the extent of the contamination that exists encased in the tanks beyond the property line and the outside of the UST at the north end of the property were not assessed. Furthermore, we have not established the responsible party to complete the abandonment of the UST and to conduct the continued assessment and remediation of the affected soil. We are requesting that you submit documentation regarding the City of Coronas ownership of the easement adjacent to the subject property, the City of Coronas responsibility to complete proper abandonment of the former UST and conduct further assessment of the affected soil, and any information on agreements between Fieldstone and the City of Corona regarding ownership of the subject property and the responsibility for the continued investigation and remediation of the releases from the UST. The further assessment and remediation of the residual petroleum that still remains in the UST under the easement to lot 41 and under Radcliffe Circle is necessary to protect the underlying groundwater resources, protect human health, reduce potential public nuisance, and properly abandon and close the remaining portion of the UST. Furthermore, the lateral and vertical extent of the petroleum hydrocarbon-affected soil detected outside the UST must be adequately assessed to determine the potential threat to the underlying groundwater resources and public health.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 151388
Site Name: SC Auto Collision & Repair
Violation Date: 02-10-2015
Citation: 40 CFR 1 265.32 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.32
Violation Description: Failure of the facility to maintain the following emergency equipment or equivalents: 1) An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel; 2) A device, such as a telephone (immediately available at the scene of Operations/ Maintenance) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams; 3) Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and 4) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.
Violation Notes: Returned to compliance on 04/21/2015.
Violation Division: Riverside County Department of Env Health
Violation Program: HW
Violation Source: CERS

Site ID: 151388
Site Name: SC Auto Collision & Repair
Violation Date: 08-09-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 11/07/2018.
Violation Division: Riverside County Department of Env Health
Violation Program: HW
Violation Source: CERS

Site ID: 151388

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount

SON'S GENERAL AUTO CENTER (Continued) **S113095225**

	greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 11/07/2018. OBSERVATION: Observed a 30 gallon drum (paint booth area) holding solvent waste without an accumulation start date. Owner stated that the hazardous waste had been there for longer than 180 days. CORRECTIVE ACTION: Owner/operator shall ensure all hazardous wastes are transported off site within 180 days of the accumulation start date. Owner/operator shall have the solvent waste properly hauled off site by a registered hazardous waste transporter.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-29-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Not reported
Eval Division: Corona Fire Department
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-27-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: - Facility generates hazardous waste labels electronically - G. Arellano stated scanners are used to determine if waste is hazardous. If the item is a hazardous waste, the scanner will notify which hazardous waste tote it belongs in. - Hazardous waste daily inspections were available during time of inspection - Facility has recently started transitioning employee training to an online course - Observed the manifests from the last 3 years. However, waste manifests were disorganized and difficult to find in the binder. The assistant manager was instructed to organize waste manifests according to years and maintain the last 3 years in the binder.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to prepare a Spill Prevention, Control, and Countermeasures (SPCC) Plan.
Violation Notes: Returned to compliance on 06/16/2021.
Violation Division: Riverside County Department of Env Health
Violation Program: APSA
Violation Source: CERS

Site ID: 181161
Site Name: Econo Lube N'Tune
Violation Date: 04-08-2021
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 05/13/2021. OBSERVATION: Observed a 55 gallon white drum with waste antifreeze on site with accumulation start date/pick up date of the year 2014. No recent manifest was available. CORRECTIVE ACTION: Owner/operator shall ensure all hazardous wastes are transported off site within 180 days i.e. 6 months of the accumulation start date. Owner/operator shall have waste

ECONO LUBE N TUNE #54 (Continued) **S113797203**

	antifreeze hazardous waste properly hauled off site by a registered hazardous waste transporter. Send to diagarci@rivco.org.

Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.
Violation Notes: Returned to compliance on 05/13/2021. OBSERVATION: Observed 2 empty 55 gallon used oil drums in the underground area which were empty and not labeled properly. CORRECTIVE ACTION: Owner/operator shall properly label all empty containers larger than 5 gallons with the words EMPTY along with the dates they were emptied. Facility has one year to manage empty containers through a hazardous waste hauler.

Eval Notes:	This facility services vehicles by providing oil changes, tune-ups, etc. Facility generates used oil, metal filters, contaminated rags, waste antifreeze. The facility stores a 250 gallon tank with used oil in an underground area. Hauler is All Valley Environmental. NOTE: The operator has mostly correct labeling on the hazardous waste tank in the underground area, however has filled the label to the point that there is no more available space to record the recent pick up/accumulation date. Obtain a new label and show the pick up/accumulation date from March 2021. Inspector verified receipts with operator. No signature obtained due to COVID 19.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 03/24/2021
Date Data Arrived at EDR: 05/11/2021

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

South Map:	12015885 CORONA SOUTH, CA
Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

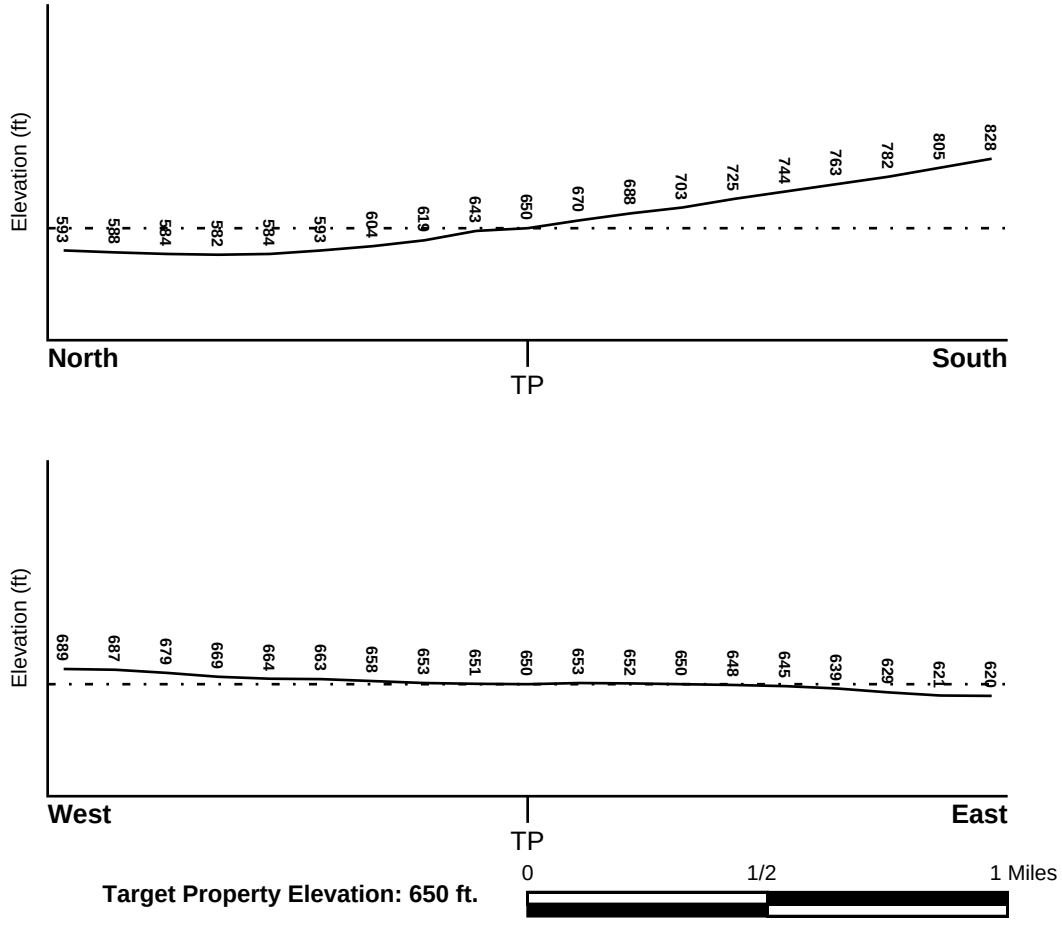
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C0689G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C9375H	FEMA FIRM Flood data

06065C1356G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CORONA NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: GARRETSON

Soil Surface Texture: gravelly very fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	gravelly very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.1
2	9 inches	53 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.1
3	53 inches	72 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

LAURA HOLDER

Project Manager

Laura, project manager at EEC, has 15 years of experience in the environmental consulting industry. Laura specializes in conducting and managing due diligence and information discovery through in-depth research of client and regulatory agency records, and reports her findings in various types of technical reports, which include Phase I and II assessment reports, and site screening assessments. As a task manager, Laura is responsible for project scheduling, completion of deliverables, project review, and client communications during all phases of work. Laura earned a Bachelor of Arts in Geography from Sonoma State University in California.

EXPERIENCE

Project Manager, Phase I Environmental Site Assessments and Due Diligence Reports, Various Clients | Nationwide

- Conducted approximately 100 Phase I ESAs for private companies and public agencies on various types of properties including large industrial facilities, transportation corridors, office buildings, gasoline filling/service stations, automotive dealers, power plants, a petroleum tank farm, oil refinery, bulk storage facility, and U.S. Army Installations inlcuding Aberdeen Proving Ground, Maryland and Fort Sill, Oklahoma.
- Completed Environmental Condition of Property (ECP) reports for U.S. Army Installations including Fort Riley, Kansas and Fort Sill, Oklahoma.
- Conducted research to locate potential environmental concerns on the subject property and surrounding sites.
- Analyzed historical aerial photographs, topographic maps, Sanborn maps, and environmental data reports.
- Conducted historical permit and document review at multiple city and regional agency offices to determine past land use.
- Authored Phase I ESA reports to be used by the client in property transactions.
- Conducted approximately 30 Site Screening Assessments for potential leases at various commercial and industrial properties.

Litigation Support Research, Superfund Sites and Regional Groundwater Plumes, Various Clients | So. CA

- Conducted historical regulatory file reviews at multiple city, county, regional, state, and federal agencies to identify past operations, chemical use, and handling practices at hundreds of sites.
- Conducted research of historical newspapers and archived special collections at local libraries.
- Conducted reviews of environmental reports such as groundwater monitoring reports, Phase I and Phase II ESAs, 5-Year Reviews, Records of Decision, and indoor air sampling reports.
- Analyzed groundwater, soil, soil vapor, and indoor air analytical data.
- Prepared summary analysis documents to determine the likelihood that a facility contributed to subsurface contamination based on factors including but not limited to history of operations, chemical usage, handling practices, and the presence of subsurface conduits.

EXPERIENCE (CON.)

Environmental Consultant: Due Diligence, Proposed Telecommunications Facilities, Verizon Wireless and Proposed Pharmacy Locations, Walgreens | NV, AZ, TX, CA

- Conducted over 200 Phase I ESAs for proposed telecommunications and pharmacy locations in Nevada, Arizona, Texas, and throughout California.
- Conducted research to locate potential environmental concerns on the subject property and surrounding sites.
- Analyzed historical aerial photographs, topographic maps, Sanborn maps, and environmental data reports.
- Conducted historical permit and document review at multiple city and regional agency offices to determine past land use.
- Authored Phase I ESA reports to be used by the client in property transactions.
- Conducted Phase II ESAs to assess former agricultural use, former dry cleaners, potential lead soil contamination, and former gasoline stations identified during the Phase I ESAs.

Environmental Consultant: NEPA, Proposed Telecommunications Facilities, Verizon Wireless | CA

- Completed over 100 NEPA Screening Reports throughout California.
- Consulted with Native Americans and local and State agencies to identify potential project impacts.
- Coordinated with a biologist to prepare natural resource assessments to identify potential impacts to sensitive species.
- Identified if the subject property was located in a floodplain, wetland, wildlife refuge, or wildlife preserve.
- Coordinated with archaeologist and architectural historian to identify potential impacts to historic properties and cultural resources.
- Authored NEPA reports to document research conducted, potential project impacts, and need for additional assessment.

Environmental Consultant, Noise Exposure Assessment at San Onofre Nuclear Generating Station (SONGS) | San Onofre, CA

- Obtained security clearance and site specific training for SONGS.
- Measured noise levels and workers' noise exposure using personal noise dosimeters and sound level meters throughout all areas of the SONGS facility, including reactor buildings, hazardous waste storage areas, and nearby Camp Pendleton's rifle training facility used by SONGS security staff.
- Maintained hourly and daily records and logs of SONGS employee activities and noise level exposures.

Environmental Consultant, Telecommunications Switching Stations and Office Headquarters, Verizon Wireless | So. CA

- Conducted site inspections to identify hazardous material quantities, locations, storage methods, and safety precautions.
- Completed required regulatory forms such as chemical inventories, maps, and business emergency contingency plans.
- Provided forms to client for submittal to the applicable State of California Certified Unified Program Agency.

EMILY A. VAVRICKA

Project Scientist

Emily is a project scientist with more than 16 years of environmental consulting and litigation support experience. The majority of her career has focused on litigation cases involving environmental liability, cost recovery and contribution actions, and environmental forensic investigations involving soil and groundwater contamination issues of various contaminants, such as chlorinated solvents and perchlorate. Emily specializes in the use of environmental forensic techniques to identify potentially responsible parties and determine the source, fate, and transport of contaminants in soil and groundwater. She is skilled in forensic review, analysis, and interpretation of scientific data; historical document research and analysis; aerial photography interpretation; statistical analysis; and geospatial analysis using geographic information systems (GIS).

Emily has assisted with the development of expert witness reports, modeling efforts, and trial preparation. She has worked on numerous environmental litigation cases across the United States that have included several cases involving Superfund Sites, such as the B.F. Goodrich Site in Rialto, California, and the Petro-Chemical Systems, Inc. (a.k.a. Turtle Bayou) site in Liberty County, Texas. She also has experience with other sites involving bulk chemical distribution facilities (chlorinated solvents), oil refineries and petro-chemical facilities (petroleum hydrocarbons, PAHs, PCBs, metals), former defense contractor sites (PCE, TCE, perchlorate), dry-cleaner sites (PCE, Stoddard solvent), chrome-plating facilities (hexavalent chromium), and pyrotechnic manufacturing sites (perchlorate).

Emily holds a Master of Science in Environmental Science / Hydrogeology from California State University, Fullerton, and a Bachelor of Science in Environmental Science from University of California, Riverside. She maintains OSHA 40-hour HAZWOPER certification.

EXPERIENCE

Project Manager, Remedial Site Investigation | Avalon, CA

- Provided historical research and technical support for three parties in response to a Department of Toxic Substances (DTSC) Order regarding the Avalon K-12 School Property and adjacent City of Avalon Warehouse Property in Avalon, California.
- Provided historical and forensic research to determine the historical use and operations at the site and adjacent properties, which included a Manufactured Gas Plant.
- Assisted with the preparation of a site conceptual model and remedial investigation workplan that was submitted to the DTSC.
- Assisted with remedial investigation field activities which included the drilling of approximately 80 soil boring locations to determine the extent of contaminants of concern which included lead, arsenic, PAHs, dioxins, cyanide, and VOCs.

Project Scientist, Litigation Support, Perchlorate Site | Pomona, CA

- Provided litigation support and assistance to defense experts in order to evaluate the distribution of perchlorate contamination in groundwater in and around the City of Pomona's Wellfield, located in the Chino Groundwater Basin, and provide opinions as to the source of perchlorate contamination.
- Conducted a comprehensive review and evaluation of historical documentation, literature, and reports in order to identify potential sources of perchlorate contamination, including historical fertilizer use, specifically Chilean nitrate fertilizer; various U.S. Department of Defense and industrial sources, municipal sources, including the Colorado River; and

potentially naturally occurring sources.

Litigation Support, Perchlorate Site| Southern California, CA

- Provided litigation support and assistance to defense experts in order to evaluate the distribution of perchlorate contamination in groundwater in and around a Southern California Wellfield, and provide opinions as to the source of perchlorate contamination.
- Analysis included a comprehensive review and evaluation of historical documentation, literature, and reports in order to identify potential sources of perchlorate contamination, including historical fertilizer use, specifically Chilean nitrate fertilizer; various Department of Defense and industrial sources, municipal sources, including the Colorado River; and potentially naturally occurring sources.
- A comprehensive database / GIS system was developed which aided in the development of trial graphics for court.

Senior Environmental Scientist, Natural Resource Damages Claims, Private Law Firm | NJ

- Senior environmental scientist in the Review of hundreds of sites to establish the validity of potential groundwater natural resource damage (NRD) claims for the State of New Jersey
- Provided technical review of historical site assessment documents and environmental reports in order to identify pertinent damage calculation information; analysis and compilation of data into a GIS project; implementation of a three-tiered QA/QC process for each potential site; and estimation of potential NRD claims utilizing groundwater injury calculations.

Senior Environmental Science, Forensic Evaluation, Private Law Firm | NJ

- Senior environmental scientist for a historical site evaluation and forensic analytical review of petroleum hydrocarbons, VOCs, and heavy metals in soil and groundwater at the ExxonMobil Bayway and Bayonne Refineries in Linden and Bayonne, New Jersey.
- Reviewed historical environmental documents and technical reports to determine the validity of potential groundwater natural resource damage claims, evaluate historical operations and chemical usage, and determine the extent of hazardous substances in soil and groundwater.
- Assisted with the development of opinions as to the extent of contamination and provided recommendations for soil and groundwater restoration.

Senior Scientist, Rialto-Colton Groundwater Plume, Litigation Support Superfund Site, City of Colton | Colton, CA

- Senior environmental scientist for litigation support involving PCE and TCE contamination of a drinking water aquifer and municipal supply wells in San Bernardino County, California.
- Provided technical review and analysis of potentially responsible parties (PRPs) to determine liability, analysis of the fate and transport of PCE and TCE in soil and groundwater, and an evaluation of remedial alternatives.
- Subsurface drilling and sampling was performed to characterize and assist in efforts to define the lateral and vertical extent of PCE and TCE in soil and groundwater.
- Responsible for the review and analysis of technical reports and environmental data to support and provide opinions in ongoing litigation activities.
- Assisted in the development of a preliminary assessment, site inspection report, and public participation plan in compliance with the National Contingency Plan pursuant to CERCLA.

Litigation Support, Superfund Site | Rialto/Colton, CA

- Senior environmental scientist for litigation support involving perchlorate and TCE contamination of a drinking water aquifer and municipal supply wells in the Rialto/Colton area, California.
- Provided technical review and analysis of potentially responsible parties (PRPs) to determine liability, analysis of the fate and transport of perchlorate and TCE in soil and groundwater, and an evaluation of remedial alternatives.
- Conducted subsurface drilling and installed two deep multi-port groundwater monitoring wells and performed soil and groundwater sampling to characterize and assist in efforts to define the lateral and vertical extent of perchlorate and TCE in soil and groundwater.
- Responsible for the review and analysis of technical reports and environmental data to support and provide opinions in ongoing litigation activities.
- Assisted in the development of a preliminary assessment, site inspection report, and public participation plan in compliance with the National Contingency Plan pursuant to CERCLA.

Senior Environmental Scientist, Litigation Support, Confidential School Site | Los Angeles, CA

- Senior environmental scientist for litigation support involving a multi-parcel site with soil and groundwater contamination from petroleum hydrocarbons, chlorinated solvents, PAHs, PCBs, pesticides, and metals, including arsenic and hexavalent chromium.
- Provided technical review and analysis of contaminants in soil and groundwater and historical operations in order to identify PRPs and determine liability.
- Efforts were conducted to assist the client in recovering costs for remediation of hazardous substances in soil and groundwater under the Hazardous Substances Account Act (California's CERCLA-equivalent statute).

Senior Environmental Scientist, PCE Site Assessment / Litigation Support, Private Law Firm | MT

- Senior environmental scientist for PCE historical site assessment/ litigation support at a site in Montana.
- Included a historical site evaluation of PCE contamination in soil and groundwater at a bulk chemical distribution facility.
- Employed environmental forensic techniques and managed the creation of a GIS project to assist with the investigation of the fate and transport of a PCE release to soil and groundwater.
- Assisted in the preparation of an expert report to support opinions as to the liability of PRPs, the volume and extent of contamination, and the age and time of the releases.

1.0 INTRODUCTION

EEC Environmental (EEC) has prepared this report to document a limited subsurface soil and soil vapor assessment conducted at the property located at 225 6th Street, Corona, California (Subject Property; Figure 1, *Site Location Map*). The purpose of the subsurface assessment was to evaluate if Recognized Environmental Conditions (RECs) identified in the October 18, 2021 Phase I Environmental Site Assessment (ESA) could potentially present an environmental concern at the Subject Property (Figure 2; Site Vicinity Map).

The RECs identified in the ESA included the potential for undocumented releases resulting from former use of the Subject Property as a lumber and milling company, gasoline service station, auto repair garage, machine shop, and laundromat. The ESA additionally identified an offsite REC resulting from former adjacent gasoline service stations and former nearby dry cleaner. The subsurface assessment was conducted on November 12 and November 17, 2021, in accordance with EEC's Proposal - Limited Phase II ESA Soil and Soil Vapor Assessment, dated November 8, 2021.

This report documents the methods, procedures, and results of the limited subsurface assessment conducted at the Subject Property. The scope of work was completed under the supervision of a California licensed Professional Geologist (PG).

2.0 SITE DESCRIPTION

The Subject Property is located northeast of the intersection of S. Belle Avenue and W. 6th Street in a commercial and residential land use setting in Corona, California (Figures 1 and 2). The approximately 1.11-acre property consists of one parcel identified as Assessor's Parcel Number (APN) 117-144-017. The Subject Property is developed with a Citizens Bank Building on the southwest corner of the parcel. The remainder of the parcel is developed with an associated drive-up ATM structure, asphalt-paved parking lot, and landscaped areas. The bank building was constructed in 1981.

The Subject Property was developed with a single-family residence in 1895. In 1911, a large, multi-building lumber and mill company was developed on the Subject Property, in addition to the residence. In the 1920s, the lumber and mill operations ceased, with the exception of a planing mill, and the remaining buildings were occupied by various businesses, including an auto repair garage, machine shop, athletic club, and office. Additionally, a church occupied the residence in the 1920s. In the 1930s and 1940s, additional retail use involved a liquor store and beauty shop. Also in the 1940s, the planing mill was replaced by a gasoline service station, a school bus storage building was developed on the northeast portion of the property, and several older buildings were removed. In the 1950s, the Subject Property was occupied by a paint shop, machine shop, auto repair and upholstery company, beauty salon, plumbing company, furniture store, and the previous school bus storage building was used for furniture storage. By the 1960s, the building on the northeast portion of the Subject Property was replaced by a new building, which was occupied by a roofing company. Also in the 1960s, several of the buildings on the south portion of the property were removed, including the gasoline service station. The remaining buildings were occupied by a blueprint company, laundromat, and a water softening company in the 1960s and 1970s. By 1981, the Subject Property was redeveloped with the existing bank building, drive-up ATM, and parking lot.

2.1 Physiography

The Subject Property is depicted on the U.S. Geological Survey 7.5-minute, Corona North and Corona South, California, quadrangle maps, dated 2012. According to the maps, the Subject Property elevation is approximately 660 feet above mean sea level. The overall topography in the area around the Subject Property slopes to the north (USGS, 2012).

2.2 Geology and Hydrogeology

According to the Geological Map of the Corona North 7.5' Quadrangle, Riverside and San Bernardino Counties, California, the Subject Property is underlain by young alluvial fan deposits, Unit 1 (Holocene and late Pleistocene), which consist of pale-gray, unconsolidated, cobble- to granule-sized gravel (USGS and California Division of Mines and Geology, 1975 and 1995). According to United States Department of Agriculture (USDA) Soil Conservation Service (SCS) soil data provided by EDR, soil at the Subject Property consists of Garretson gravelly very fine sandy loam. According to a Second Quarter 2008 Monitoring Report for a site located approximately 425 feet west of the Subject Property, depth to groundwater is expected to range between 125 to 130 feet below ground surface (bgs; EAR Engineering, Construction & Support Services, 2008). The groundwater flow direction is expected to be north, based on topography.

2.3 Background

On October 18, 2021, EEC completed a Phase I ESA at the Site (EEC, 2021). The Phase I ESA determined that the Subject Property was previously developed with multiple buildings that were occupied by various industries during the 1910s to 1970s – including a lumber and mill company, an auto repair garage, a machine shop, a gasoline service station, and a laundromat, as discussed previously. These former occupants likely used hazardous substances including gasoline, diesel fuel, oils, lubricants, coolants, and solvents, and wood preservation chemicals. Due to these time-periods and the absence of environmental regulations, environmental records were generally not available for the identification of chemical storage and handling practices or even if the potential underground storage tanks (USTs) were removed or left in-place.

As previously stated, the RECs identified in the ESA included the potential for undocumented releases resulting from former use of the Subject Property as a lumber and milling company, gasoline service station, auto repair garage, machine shop, and laundromat. The ESA also identified an offsite REC resulting from former adjacent gasoline service stations and former nearby dry cleaner.

3.0 SITE ASSESSMENT ACTIVITIES

To evaluate if the RECs have impacted the property at concentrations above current regulatory criteria, a subsurface assessment was conducted. No assessment activity could be conducted directly below the existing bank building, but it is believed that any significant impacts to the subsurface would be identified in vapor probes near the building.

Subsurface assessment activities were initiated on November 12, 2021. The assessment included drilling fifteen (15) soil borings (SB-1 through SB-15) ranging from 5 to 15 feet deep and installing soil vapor probes for the collection of soil vapor samples (Figure 3, *Historical Use and Sample Location Map*).

3.1 Pre-Drilling Activities

The following activities were completed prior to beginning the site activities.

3.1.1 Health and Safety Plan

To protect workers, a site-specific health and safety plan (HASP) was developed to inform all site workers of potential risks during field sampling activities, and to provide engineering controls to avoid physical and chemical hazards. The HASP addressed potential physical and chemical hazards associated with field operations and risks associated with drilling equipment. The HASP outlined the steps to prevent exposures from related site activities. The HASP also described the safe use of equipment, evaluation of hazards, safe investigation procedures, personal protective equipment, emergency procedures, and training required to conduct the site assessment under typical Hazardous Waste Operations and Emergency Response protocols. The HASP also discussed safety measures when working during the Coronavirus pandemic.

3.1.2 Utility Clearance

In compliance with California Government Code Section 4216-4216.9, EEC marked the proposed boring locations with white paint so that the proposed area was visible to underground service alert (USA) members. EEC also used blue survey flags to mark the boring locations. USA is a regional notification center that notifies owners and operators of subsurface utilities (water, gas, electric, sewer, oil lines, etc.) and informs them of a contractor's intent to perform subsurface work. EEC properly notified USA of the intent to perform subsurface work at least 48 hours prior to the beginning of the activities.

As an additional layer of protection, EEC contracted a private utility-locating company to clear all proposed boring locations of underground utilities. The geophysical survey was performed by using several geophysical methods, including high-sensitivity metal detection, shallow-focus terrain conductivity, ground-penetrating radar (GPR), and electromagnetic utility locating.

3.2 Soil Boring Advancement and Soil Sampling

EEC retained and supervised Strongarm Environmental Field Services, Inc. to drill a total of 15 soil borings, using a limited access direct-push drilling rig. Six (6) soil borings were advanced to 5 feet bgs and nine (9) soil borings were advanced to 15 feet bgs. Direct-push drilling rigs are hydraulically powered soil probing machines that use both static force and percussion to drive steel boring rods into the subsurface.

A portion of soil from each boring was used for field screening using a photoionization detector (PID) for evaluation of organic vapor content and for logging lithology. Field screening was conducted by placing a portion of the unpreserved soil in a sealable plastic bag for approximately 10 minutes. The organic vapor concentration in the headspace of the plastic bag was then measured using a PID. Soil descriptions and PID measurements were recorded and documented on field notes. Soil boring logs are included as Appendix A, *Boring Logs*. All field activities were performed under the direct oversight of a PG.

During drilling, soil samples were collected at 1-foot and 5-foot depths for the borings that were advanced to 5 feet bgs. Soil samples were collected at 5 feet and 15 feet bgs from the borings that were advanced to 15 feet bgs. During boring advancement, soil samples were collected by advancing the

direct-push boring to a point immediately above the sample depth. A percussion hammer outfitted with a 1.5-inch-diameter, clear acetate sleeve was driven approximately 5 feet into undisturbed soil and a soil sample was collected in the sleeve. Following sample retrieval, the lowermost intact portion of the sleeve was cut, covered with Teflon sheets, and sealed with plastic end caps. Soil samples were labeled with an identification number, sealed in a plastic bag, and placed into a chilled cooler. The collected soil samples were transferred under proper chain-of-custody protocols to a laboratory for analysis. Soils within the unused portion of the acetate sleeve within each sampling interval was screened in the field using a photo ionization detector (PID) to evaluate organic vapor content. A portion of the soil was placed in a sealable plastic bag for approximately 10 minutes. The organic vapor concentration in the headspace of the plastic bag was then measured using a PID. Soil descriptions and PID measurements were recorded and documented on the soil boring logs (Appendix A).

Collected soil samples were submitted to Enthalpy Analytical (Enthalpy) for analysis. Enthalpy is a State of California accredited environmental laboratory for the selected analysis. Select soil samples from each boring were analyzed for total petroleum hydrocarbons as gasoline (TPHg), diesel-range organics (DRO), and oil-range organics (ORO) by United States Environmental Protection Agency (USEPA) Method 8015B (M), volatile organic compounds (VOCs) by USEPA Method 8260B, semi-volatile organic compounds (SVOCs) by USEPA Method 8270C, Title 22 Metals by USEPA Method 6010B/7471A, and Hexavalent Chromium by USEPA Method 7199. The project sampling matrix, including boring locations, and analytes tested at depth intervals for each boring are presented in Table 1, *Sampling Matrix*.

3.3 Soil Vapor Probe Construction and Sampling

Once the total depth of each boring was reached, soil vapor probes were installed in nine soil borings at a depth of 5 feet and 15 feet bgs. Vapor probes were labeled SV-1 through SV-9, corresponding to Borings SB-1 through SB-9, respectively. The soil vapor probes were installed by extending 0.25-inch diameter Polyetheretherketone (PEEK) tubing fitted with a 1-inch-long probe screen placed near the bottom of an approximately 1-foot-thick filter pack comprised of No. 3 sand. Dry granular bentonite was poured to approximately 1 foot above the sand pack and hydrated bentonite was poured above the dry bentonite to the surface. This construction design is in general accordance with the DTSC July 2015 *Advisory on Active Soil Gas Investigations (DTSC 2015 Advisory)*.

Prior to sampling, a shut-in vacuum test was conducted on the sample train. During sampling, the entire sample train was placed under a shroud where a tracer gas (helium) was released. The tracer gas was used to expose leaks between the probe tubing, joints in the sampling train, and the surface during sampling. While the probe is actively extracting soil-vapor from the subsurface, a minimum concentration of 20% of the shroud's volume was maintained as tracer gas. The tracer gas concentrations were continuously monitored using a multi-gas detector. The tracer gas was also analyzed by the American Section of the International Association for Testing Materials (ASTM) Method D-1946 to determine if there were surface leaks into the subsurface due to improper installation of the probe. In accordance with the DTSC July 2015 advisory - Active Soil Gas Investigations, EEC allowed soil vapor conditions to equilibrate five days prior to sampling; the DTSC advisory requires a minimum of two hours prior to collecting vapor samples.

Each probe was purged of stagnant air (3 purge volumes) using a standard vacuum pump with a flow of approximately 200 milliliters per minute (mL/min). Soil-vapor samples were then collected using a 1-liter laboratory certified clean Summa canister equipped with a laboratory calibrated flow regulator set to a

rate of approximately 200 mL/min. The collected samples were submitted to Enthalpy, for analysis of VOCs in accordance with USEPA Method TO-15.

4.0 RESULTS

The soil and soil vapor laboratory analytical results are summarized below. The 2019 San Francisco Bay Regional Water Quality Control Board (SFB-RWQCB) Environmental Screening Levels (ESLs) were used to evaluate both soil and soil vapor results. While the Site is not located in the San Francisco Region, the ESLs were used because they are the most current, comprehensive, and conservative set of screening levels. The ESLs are increasingly becoming the current industry standard for multiple media evaluation. The cancer risk value for ESLs was used unless not available; in that case, the non-cancer risk value was used. The results have been evaluated using the industrial/commercial screening criteria. If the Site use changes, for instance to residential, then the Site should be re-evaluated using the requisite residential screening criteria.

Soil

Soil results are summarized below. Laboratory analytical results, chain-of-custody documentation, and quality control data are included in Appendix B.

There were no detections of TPHg, DRO, ORO, semi-VOCs, or VOCs in any of the collected soil samples. Arsenic was detected at concentrations ranging from 1.4 milligrams per kilogram (mg/kg) to 14 mg/kg. Although this value exceeds the screening levels set by the SFB-RWQCB, it is withing the range which is typical for Southern California soils. In a 1995 study, the Lawrence Berkeley National Laboratory determined the background arsenic concentration in Southern California typically ranges from 5 to 20 mg/kg. The California Department of Toxic Substance Control (DTSC) has established a background level of 12 mg/kg for California schools.

Various other metals (including mercury) were detected at low concentrations in soil; however no concentrations exceeded their respective screen levels for soil set by the SFB-RWQCB. Hexavalent chromium was not detected in any of the collected soil samples.

Soil Vapor

Soil vapor results are summarized below and in Table 2, *Soil Vapor Analytical Results*. Laboratory analytical results, chain-of-custody documentation, and quality control data are included in Appendix B.

Numerous low-level detections of VOCs were reported in all soil vapor samples collected. All detections were below commercial screening levels, except for one sample which slightly exceeded the commercial ESL for benzene. Most of the detected VOCs were also below residential screening levels, except for benzene, ethylbenzene, and chloroform, which slightly exceeded screening levels as described below:

- Benzene was detected in twelve of the eighteen soil vapor samples at concentrations ranging from 1.3 to 17 micrograms per cubic meter (µg/m^3). Six of the sample results exceeded the residential ESL of 3.2 µg/m^3. No samples exceeded commercial screening levels, except for one sample that slightly exceeded the commercial screening level of 14 ug/m^3. That sample, SV-4-15, has a benzene concentration of 17 ug/m^3 at 15 feet bgs, but was less than the commercial and residential screening level at 5 feet bgs.

- Ethylbenzene was detected in seven of the soil vapor samples at concentrations ranging from 3.3 to 79 µg/m^3. Two of the sample results exceed the residential ESL of 37 µg/m^3. None exceeded commercial screening levels.

- Chloroform was detected in three of the soil vapor samples at concentrations ranging from 3.6 to 8.3 µg/m^3. Two of the results exceeded the residential ESL of 4.1 µg/m^3. None exceeded commercial screening levels.

5.0 CONCLUSIONS

Based upon the results of this investigation, no chemical of concerns were detected in soil. Further, soil vapor data indicates the presence of only low levels of VOC compounds in soil vapor, none of which exceed the conservative commercial screening levels, except for one sample. One sample contained benzene at a concentration of 17 ug/m^3 at 15 feet bgs as compared to the screening level of 14 ug/m^3. However, the sample from 5 feet was found at a concentration of 2.1 ug/m^3, below the residential screening level.

Based on the findings of the site assessment and associated data, it does not appear that the identified RECs have resulted in impacts to the subsurface that would result in regulatory action or will affect the future use or redevelopment of the Site, based on the Site remaining as a commercial/industrial property. Results of the sampling indicate that levels of metals detected in soil are considered low and are below their respective screening levels, except for arsenic which was found at levels generally consistent with background in the region.

As mentioned above, a single detection of benzene, slightly exceeding the commercial ESL, was detected in soil vapor. This detection is likely associated with residual impact from activities associated with the former lumber operations. While a single detection of benzene in soil vapor is slightly over the cancer risk screening level, it is not viewed as risk driver due to the proposed use of the Site and isolated occurrence. Further, no soil sample at the Site contained detectable benzene or other petroleum constituents. Given the depth to groundwater and isolated occurrence of benzene, groundwater is not an apparent source of VOCs in soil vapor; nor do soil or soil vapor concentrations suggest levels of petroleum hydrocarbons or VOCs that could impact groundwater.

Based on the above presented conclusions, EEC recommends that no further investigation be performed at this time.

Notes:

bgs - below ground surface

ft - feet

TPH - total petroleum hydrocarbons, analyzed by United States Environmental Protection Agency (USEPA) Method 8015B

SVOCs - semivolatile organic compounds, analyzed by USEPA Method 8270C

VOCs - volatile organic compounds, analyzed by USEPA Method 8260B

Metals analyzed by USEPA Method 6010B/7471A, includes hexavalent chromium by USEPA Method 7199

Key:

bgs = below ground surface

BOLD = detections above the Method Detection Limit

ND = analyte not detected above laboratory reporting limit

PCE = Tetrachloroethene

TCE = Trichloroethene

USEPA = United States Environmental Protection Agency

VOCs = Volatile Organic Compounds

$\mu g/m^3$ = micrograms per cubic meter

[1] SFB-RWQCB ESLs = San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels, 2019 (Rev. 2), cancer risk values, except here noted.

[2] ESL cancer risk values not established; therefore, non-cancer values were used.

[3] ESLs do not speciate screening levels per individual isomers, but rather report them as a combined value.

B = Contamination found in associated Method Blank

J = analytical report estimated value, between the method detection level and the reporting level

b = Data affected by high percent relative standard deviation for isopropanol

Sampling Method	Continuous core
Borehole Diameter	2.25 inches
Casing Diameter	0.25 inches
Location N-S	
Location E-W	
Total Boring Depth	15' bgs
First GW Depth	Not Encountered

Sample Condition: No Recovery; Sampled Interval; Described Sample; Preserved Sample

Water Levels: Groundwater After Completion; Groundwater During Drilling

Depth (ft)	PID (ppmv)	USCS	DESCRIPTION (%clay/silt/sand/gravel)
0			Top surface is asphalt, 8 inches thick
1		SM	SAND WITH SILT: fine- to medium-grained, brown (7.5YR 5/4), dry; trace subangular to subrounded gravel (0/20/75/5)
5	1.4		Lithology same as above
15	0.3		Lithology same as above

The descriptive information for classification symbol and name of soil is based on ASTM D2488 Standard Practice for Description and Identification of Soils (Visual-Manual Procedure).

Well1: Shallow @ 5' bgs
Well2: Deep @ 15' bgs

SAMPLE ACCEPTANCE CHECKLIST

Section 1
Client: EEC
Project: Citizen Business Bank
Date Received: 11/9/21
Sampler's Name Present: ☑ Yes ☐ No

Section 2
Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2)
Sample Temp (°C) (No Cooler): _____
Sample Temp (°C), One from each cooler: #1: 0.5 #2: _____ #3: _____ #4: _____
(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)
Shipping Information: _____

Section 3
Was the cooler packed with: ☑ Ice ☑ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____
Cooler Temp (°C): #1: 0.0 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?	✓		
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6
For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____
☐ Email (email sent to/on): _____/_____
Project Manager's response:

Completed By: [signature] Date: 11/12/21

Case Narrative

EEC 1 City Boulevard West Suite 1800 Orange, CA 92868 Laura Holder	Lab Job Number: 453808 Location: Citizen Business Bank - 225 W. 6th St., Corona, CA Date Received: 11/18/21

This data package contains sample and QC results for eighteen air samples, requested for the above referenced project on 11/18/21. The samples were received cold and intact.

Volatile Organics in Air by MS (EPA TO-15):

High ICAL percent RSD (relative standard deviation) was observed for isopropanol (IPA) in the calibration analyzed 10/21/21 18:13; affected data was qualified with "b". Many analytes were detected between the MDL and the RL in the method blank for batch 278389. No other analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946):

No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: EEC Project: Citizen Business Bank

Date Received: 11/18/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☐ Yes, How many? _____ ☑ No (skip section 2) Sample Temp (°C) (No Cooler): AMB

Sample Temp (°C), One from each cooler: #1: _____ #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☐ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: _____ #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✔		
Are sample IDs present?	✔		
Are sampling dates & times present?	✔		
Is a relinquished signature present?	✔		
Are the tests required clearly indicated on the COC?	✔		
Are custody seals present?		✔	
If custody seals are present, were they intact?			✔
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✔
Did all samples arrive intact? If no, indicate in Section 4 below.	✔		
Did all bottle labels agree with COC? (ID, dates and times)	✔		
Were the samples collected in the correct containers for the required tests?	✔		
Are the containers labeled with the correct preservatives?			✔
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✔
Was a sufficient amount of sample submitted for the requested tests?	✔		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: [signature] Date: 11/18/21

1.0 INTRODUCTION

EEC Environmental (EEC) has prepared this report to document a limited subsurface soil and soil vapor investigation conducted at the property located at 410 S. Main Street, 323 S. Belle Avenue, and 332 S. Washburn Avenue, Corona, California (Subject Property; Figure 1, *Site Location Map*). The purpose of the subsurface investigation was to evaluate if Recognized Environmental Conditions (RECs) identified in the November 2021 Phase I Environmental Site Assessment (ESA) could potentially present an environmental concern at the Subject Property (Figure 2; Site Vicinity Map).

The RECs identified in the ESA included the potential for undocumented releases resulting from former use of the Subject Property as a machine shop and metalworking facility. The ESA also identified potential impacts to the Subject Property from a nearby dry cleaner as an offsite REC. The subsurface investigation was conducted on January 5 and January 10, 2021, in accordance with EEC's Proposal - Limited Soil and Soil Vapor Phase II ESA, dated December 15, 2021.

This report documents the methods, procedures, and results of the limited subsurface assessment conducted at the Subject Property. The scope of work was completed under the supervision of a California licensed Professional Geologist (PG).

2.0 SITE DESCRIPTION

The Subject Property is located east of the intersection of S. Belle Avenue and W. 4th Street in a commercial and residential land use setting in Corona, California (Figure 1; Figure 2, *Site Vicinity Map*). The approximately 1.31-acre Subject Property consists of four parcels identified as Assessor's Parcel Numbers (APNs) 117-103-026, 117-103-027, 117-142-016, and 117-142-017. The north portion of the Subject Property is developed with three single-family residences and a gravel lot. The remainder of the Subject Property consists of a vacant lot with concrete building pads from former onsite buildings and an associated asphalt-paved parking lot. A paved road (4th Street) extends east to west between the residences and vacant lot. This road turns 90 degrees to the north at the east portion of the Subject Property. The north/south-trending portion of this road is named Washburn Avenue.

The Subject Property was developed with single-family residences and associated buildings from at least 1895 to the 1930s. A vacant building, carpenter shop, and blacksmith shop were also located on the Subject Property during this time period. In the 1930s, the south portion of the Subject Property was developed with a machine shop. A roofing company was developed next to the machine shop in the 1940s. A new residence was developed on the north portion of the Subject Property in the 1950s. The south portion of the Subject Property continued to be used as a machine shop from the 1950s to the early 1990s. Other metalworking companies operated at this portion of the Subject Property during this time frame. One of the residences on the north portion of the Subject Property was demolished and replaced by a gravel lot in the 1990s. From the mid-1990s to 2000s, the buildings on the south portion of the subject property were occupied by a sign and lighting company, carpet shop, and drapery and upholstery shop. The buildings on the south portion of the Subject Property were demolished in 2013 and only building pads remain. The north portion of the Subject Property remains developed with single-family residences.

2.1 Physiography

The Subject Property is depicted on the U.S. Geological Survey 7.5-minute, Corona North and Corona South, California, quadrangle maps, dated 2012. According to the maps, the subject property elevation is approximately 640 feet above mean sea level. The overall topography in the area around the Subject Property slopes to the north (USGS, 2012).

2.2 Geology and Hydrogeology

According to the Geological Map of the Corona North 7.5' Quadrangle, Riverside and San Bernardino Counties, California, the Subject Property is underlain by young alluvial fan deposits, Unit 1 (Holocene and late Pleistocene), which consist of pale-gray, unconsolidated, cobble- to granule-sized gravel (USGS and California Division of Mines and Geology, 1975 and 1995). According to United States Department of Agriculture (USDA) Soil Conservation Service (SCS) soil data provided by EDR, soil at the Subject Property consists of Garretson gravelly very fine sandy loam. According to a Case Closure Summary for a site located approximately 280 feet northwest of the Subject Property, depth to groundwater is expected to be approximately 78 feet below ground surface (bgs; Riverside County Department of Environmental Health, 1995). However, it should be noted that a groundwater monitoring report for another nearby site indicated groundwater depth was approximately 125 to 130 feet bgs (EAR Engineering, Construction & Support Services, 2008). The groundwater flow direction is expected to be north, based on topography.

2.3 Background

On November 29, 2021, EEC completed a Phase I ESA at the Site (EEC, 2021). The Phase I ESA determined that the south portion of the Subject Property was previously developed with industrial buildings that were occupied by a machine shop and other metalworking companies from the 1930s to early 1990s. Based on the nature of operations, the former occupants likely used hazardous substances including oils, lubricants, and solvents and generated scrap metal shavings and dust. Additionally, a rectangular-shaped cut was observed in the concrete in the center of one of the associated building pads that appeared similar to a former pit, clarifier, or drain. Information was not available related to the handling practices of hazardous materials or hazardous waste disposal practices.

As previously stated, the RECs identified in the ESA included the potential for undocumented releases resulting from former use of the Subject Property as a machine shop and metalworking facility. The ESA also identified potential impacts to the Subject Property from a nearby dry cleaner as an offsite REC.

3.0 SITE ASSESSMENT ACTIVITIES

Subsurface investigation activities were performed on January 5, 2022. The investigation included drilling ten (10) soil borings (SB-1 through SB-10) ranging from 5 to 15 feet deep and installing soil vapor probes for the collection of soil vapor samples (Figure 3, *Sample Location Map*).

3.1 Pre-Drilling Activities

The following activities were completed prior to beginning the site activities.

3.1.1 Health and Safety Plan

To protect workers, a site-specific health and safety plan (HASP) was developed to inform all site workers of potential risks during field sampling activities, and to provide engineering controls to avoid physical and chemical hazards. The HASP addressed potential physical and chemical hazards associated with field operations and risks associated with drilling equipment. The HASP outlined the steps to prevent exposures from related site activities. The HASP also described the safe use of equipment, evaluation of hazards, safe investigation procedures, personal protective equipment, emergency procedures, and training required to conduct the site assessment under typical Hazardous Waste Operations and Emergency Response protocols. The HASP also discussed safety measures when working during the Coronavirus pandemic.

3.1.2 Utility Clearance

In compliance with California Government Code Section 4216-4216.9, EEC marked the proposed boring locations with white paint so that the proposed area was visible to underground service alert (USA) members. EEC also used blue survey flags to mark the boring locations. USA is a regional notification center that notifies owners and operators of subsurface utilities (water, gas, electric, sewer, oil lines, etc.) and informs them of a contractor's intent to perform subsurface work. EEC properly notified USA of the intent to perform subsurface work at least 48 hours prior to the beginning of the activities.

As an additional layer of protection, EEC contracted a private utility-locating company (SoCal Locators) to clear all proposed boring locations of underground utilities. Additionally, the geophysical survey assessed the area of a suspected clarifier, sump, or drain observed during the Phase I ESA. According to the geophysical surveyor, the feature did appear to be a clarifier. The geophysical survey was performed by using several geophysical methods, including high-sensitivity metal detection, shallow-focus terrain conductivity, ground-penetrating radar (GPR), and electromagnetic utility locating.

3.2 Soil Boring Advancement and Soil Sampling

EEC retained and supervised Strongarm Environmental Field Services, Inc. to drill a total of 10 soil borings (SB-1 through SB-10), using a limited access direct-push drilling rig. Two (2) soil borings were advanced to 5 feet bgs and eight (8) soil borings were advanced to 15 feet bgs. Direct-push drilling rigs are hydraulically powered soil probing machines that use both static force and percussion to drive steel boring rods into the subsurface.

A portion of soil from each boring was used for field screening using a photoionization detector (PID) for evaluation of organic vapor content and for logging lithology. Field screening was conducted by placing a portion of the unpreserved soil in a sealable plastic bag for approximately 10 minutes. The organic vapor concentration in the headspace of the plastic bag was then measured using a PID. Soil descriptions and PID measurements were recorded and documented on field notes. Soil boring logs are included as Appendix A, *Boring Logs*. All field activities were performed under the direct oversight of a PG.

During drilling, soil samples were collected at 5-foot depths for the borings that were advanced to 5 feet

bgs. Soil samples were collected at 5 feet, 10 feet, and 15 feet bgs from the borings that were advanced to 15 feet bgs. Additionally, soil samples were collected from one foot bgs in soil borings SB-2, SB-3, SB-5, SB-9, and SB-10. During boring advancement, soil samples were collected by advancing the direct-push boring to a point immediately above the sample depth. A percussion hammer outfitted with a 1.5-inch-diameter, clear acetate sleeve will be driven approximately 5 feet into undisturbed soil and a soil sample will be collected in the sleeve. Following sample retrieval, the lowermost intact portion of the sleeve was cut, covered with Teflon sheets, and sealed with plastic end caps. Soil samples were labeled with an identification number, sealed in a plastic bag, and placed into a chilled cooler. The collected soil samples were transferred under proper chain-of-custody protocols to a laboratory for analysis.

Collected soil samples were submitted to Enthalpy Analytical (Enthalpy) for analysis. Enthalpy is a State of California accredited environmental laboratory for the selected analysis. Select soil samples from each boring were analyzed for total petroleum hydrocarbons as gasoline (TPHg), diesel-range organics (DRO), and oil-range organics (ORO) by United States Environmental Protection Agency (USEPA) Method 8015B (M), volatile organic compounds (VOCs) by USEPA Method 8260B, semi-volatile organic compounds (SVOCs) by USEPA Method 8270C, Title 22 Metals by USEPA Method 6010B/7471A, and Hexavalent Chromium by USEPA Method 7199. The project sampling matrix, including boring locations and analytes tested at particular depth intervals for each boring, is presented in Table 1, *Sampling Matrix*.

3.3 Soil Vapor Probe Construction and Sampling

Once the total depth of each boring was reached, soil vapor probes SV-1 and SV-2 were installed in two soil borings (SB-1 and SB-2) at a depth of five feet bgs and soil vapor probes SV-3 through SV-10 were installed in eight soil borings (SB-3 through SB-10) at depths of 5 feet and 15 feet bgs. The soil vapor probes were installed by extending 0.25-inch diameter Polyetheretherketone (PEEK) tubing fitted with a 1-inch-long probe screen placed near the bottom of an approximately 1-foot-thick filter pack comprised of No. 3 sand. Dry granular bentonite was poured to approximately 1 foot above the sand pack and hydrated bentonite was poured above the dry bentonite to the surface. This construction design is in general accordance with the DTSC July 2015 *Advisory on Active Soil Gas Investigations (DTSC 2015 Advisory)*.

Prior to sampling, a shut-in vacuum test was conducted on the sample train. During sampling, the entire sample train was placed under a shroud where a tracer gas (helium) was released. The tracer gas was used to expose leaks between the probe tubing, joints in the sampling train, and the surface during sampling. While the probe is actively extracting soil-vapor from the subsurface, a minimum concentration of 20% of the shroud's volume was maintained as tracer gas. The tracer gas concentrations were continuously monitored using a multi-gas detector. The tracer gas was also analyzed by the American Section of the International Association for Testing Materials (ASTM) Method D-1946 to determine if there were surface leaks into the subsurface due to improper installation of the probe. In accordance with the DTSC July 2015 advisory - Active Soil Gas Investigations, EEC allowed soil vapor conditions to equilibrate four days prior to sampling; the DTSC advisory requires a minimum of two hours prior to collecting vapor samples.

Each probe was purged of stagnant air (3 purge volumes) using a standard vacuum pump with a flow of approximately 200 milliliters per minute (mL/min). Soil-vapor samples were then collected using a 1-liter laboratory certified clean Summa canister equipped with a laboratory calibrated flow regulator set to a

rate of approximately 200 mL/min. The collected samples were submitted to Enthalpy, for analysis of VOCs in accordance with USEPA Method TO-15.

4.0 RESULTS

Soil

Soil results are summarized below. Laboratory analytical results, chain-of-custody documentation, and quality control data are included in Appendix B. Soil results were compared to the 2019 San Francisco Bay Regional Water Quality Control Board (SFB-RWQCB) Environmental Screening Levels (ESLs), as they are the most conservative and are the current industry standard for multiple media. The cancer risk value for ESLs was used unless not available; in that case, the non-cancer risk value ESLs were used.

There were no detections of TPHg, DRO, ORO, semi-VOCs, or VOCs in any of the collected soil samples. Arsenic was detected at concentrations ranging from 9.6 milligrams per kilogram (mg/kg) to 11 mg/kg. Although this value exceeds the screening levels set by the SFB-RWQCB, it is withing the range which is typical for Southern California soils. In a 1995 study, the Lawrence Berkeley National Laboratory determined the background arsenic concentration in Southern California typically ranges from 5 to 20 mg/kg. The California Department of Toxic Substance Control (DTSC) has established a background level of 12 mg/kg for California schools.

Various other metals were detected at low concentrations in soil; however, no concentrations exceeded their respective ESLs for soil set by the SFB-RWQCB. Hexavalent chromium and mercury were not detected in any of the collected soil samples.

Soil Vapor

Soil vapor results are summarized below and in Table 2, *Soil Vapor Analytical Results*. Laboratory analytical results, chain-of-custody documentation, and quality control data are included in Appendix B. The results were compared to the 2019 SFB-RWQCB ESLs, as they are the most conservative and are the current industry standard for multiple media. The cancer risk value for ESLs was used unless not available; in that case, the non-cancer risk value ESLs were used.

Numerous low-level detections of VOCs were reported in all soil vapor samples collected. All detections were below commercial/industrial ESLs, with the exception of bromodichloromethane, which was detected at 27 micrograms per cubic meter ($\mu g/m^3$) in SB-10-15 SV, which exceeded the commercial/industrial ESL of 11 $\mu g/m^3$. This chemical is a known by-product of water chlorination and is likely source from a potable water system. Further, it was only detected in one sample. Based on the likely source and isolated occurrence and is not expected to drive risk.

5.0 ASSESSMENT CONCLUSIONS

Based upon the results of this limited investigation, no chemicals of concern were detected in collected soil samples. Soil vapor sampling results indicated the presence of only low levels of VOC compounds, none of which exceeded commercial/industrial ESLs. Based on the proposed commercial use of the Subject Property, it is EEC's opinion that no additional investigation is warranted.

Case Narrative

EEC 1 City Boulevard West Suite 1800 Orange, CA 92868 Laura Holder	Lab Job Number: 456420 Location: 410 S. Main Street Phase II - Corona, CA Date Received: 01/06/22

This data package contains sample and QC results for thirteen soil samples, requested for the above referenced project on 01/06/22. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
No analytical problems were encountered.

Semivolatile Organics by GC/MS (EPA 8270C):
High response was observed for pentachlorophenol in the CCV analyzed 01/07/22 10:57; affected data was qualified with "b". No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):
Low recoveries were observed for antimony in the MS/MSD of SB-3-1 (lab # 456420-004); the LCS was within limits, and the associated RPD was within limits. High recovery was observed for barium in the MS of SB-3-1 (lab # 456420-004); the LCS was within limits, and the associated RPD was within limits. No other analytical problems were encountered.

Hexavalent Chromium by Ion Chromatograph (EPA 7199):
No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: EEC Environmental Project: 410 S. Main St. Phase II

Date Received: 1/6/22 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 1.9 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 1.1 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: Deena Sylvestri Date: 1/6/22
