Laura Holder

Lab Job Number: 456645
Location: 410 S. Main St.
Date Received: 01/11/22

This data package contains sample and QC results for eighteen air samples, requested for the above referenced project on 01/11/22. The samples were received cold and intact.

Volatile Organics in Air by MS (EPA TO-15):
High response was observed for 1,2,4-trichlorobenzene in the ICV analyzed 01/07/22 20:01; affected data was qualified with "b". No other analytical problems were encountered.

Volatile Organics in Air GC (ASTM D1946):
No analytical problems were encountered.

ENTHALPY ANALYTICAL

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: EEC Project: _____

Date Received: 1/11/22 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☐ Yes, How many? _____ ☑ No (skip section 2) Sample Temp (°C) (No Cooler): N/A

Sample Temp (°C), One from each cooler: #1: _____ #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: ambient

Section 3

Was the cooler packed with: ☐ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: _____ #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 1/11/22

SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1. EXECUTIVE SUMMARY

Ramboll Americas Engineering Solutions, Inc. (Ramboll) was retained by Los Altos XX, LP (Los Altos) to perform a Phase I Environmental Site Assessment (ESA) of a property located at 401, 407, 411, 413, 417, and 421 South Belle Avenue; 450 South Main Street #B; and 215 West 5th Street in Corona, California (herein referred to as the "facility" or the "site;" Figures 1 and 2). Ramboll's assessment was conducted in connection with a potential purchase of the site.

The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-21 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 7).

The scope of work for the Phase I ESA was expanded to include an evaluation of the following additional considerations that are not included within the ASTM Standard[1]: asbestos-containing materials (ACM), lead-based paint, radon, and water intrusion/mold.

1.1 Site Summary

The approximately 1.5-acre site is comprised of eight parcels, seven of which located on the western portion of the site are undeveloped/vacant and one of which located on the eastern portion of the site is improved with an approximately 8,000-square-foot building as a commercial strip mall. The site is owned by Los Altos and managed by Northgate Gonzalez RE, LLC.

The site was used for residential and agricultural purposes since at least the 1890s through the 1980s and 2000s, when the residences were demolished. A strip mall was constructed on the eastern half of the site in the mid-to late-1980s. The current site building has been used for commercial (retail/office/restaurant) operations since its construction. The site building is currently occupied by four tenants including a collectibles store (Mancave Museum), a beauty salon (Carolina's Beauty Salon), a restaurant (Super Taco), and a liquor store (Jashua Liquor), as well as a vacant space.

1.2 Phase I ESA Conclusions

Ramboll performed a Phase I ESA of the site in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 7.2 of this report. The assessment has revealed no RECs, controlled RECs (CRECs), or significant data gaps (SDGs) in connection with the subject site.

1.2.1 Additional Findings

Ramboll identified the following additional findings that are not considered RECs or CRECs:

- **Past Use of Site.** The site was historically used for residential and small-scale agricultural purposes. The residences and farming operations may have used aboveground or underground fuel oil tanks for heating purposes and/or for farm operations/vehicle fueling. As such, during any future grading/site development activities, the contractor should be prepared to encounter potential buried underground anomalies or pockets of impacted soil. Furthermore, given the historical use of the site for agricultural purposes, there is a potential for arsenic and/or

[1] The ASTM Standard refers to these matters as "non-scope considerations."

organochlorine pesticides to be present in shallow soil. In the event of any future residential use, characterization of shallow soil may be warranted. Although this matter is not considered a REC, the potential presence of these compounds in the site subsurface cannot be ruled out. Ramboll notes that the above matters are unlikely to result in regulatory scrutiny under the proposed commercial use of the site.

1.3 Additional Considerations

Ramboll conducted a screening-level review of certain additional considerations that are not considered part of the ASTM Standard, as discussed in Section 5.3. Ramboll did not identify any concerns relating to mold/water intrusion and radon. Ramboll's key findings from its review of additional considerations include the following:

- **Asbestos-Containing Materials and Lead-Based Paint.** An asbestos survey was conducted by Masek Consulting Services Inc. (Masek) in 2019 within the building at the site. The survey identified ACMs on accessible interior and exterior building surfaces associated with the site building. The quantities were typical of buildings of similar use, size, and age. According to Masek, the ACMs identified at this building can be removed and disposed of as non-friable, nonhazardous asbestos waste, with the exception of those identified as friable materials (further discussed in Section 5.3.) that have been classified and should be treated as friable, hazardous asbestos waste.

  In addition, Masek conducted lead-based paint (LBP) and Lead-glazed ceramic tile (LBP) survey at the site in 2019. Reportedly, no LBP was identified greater than or equal to 1.0 milligram per square centimeter (mg/cm^2) in most places of the site building. Lead-glazed ceramic tile (XRF readings greater than or equal to 1.0 mg/cm^2) was identified in the coating and glaze on the blue decorative clay tile roof on the parapet overhang in front and on the left side, and within the tan ceramic floor tile in the dining area of Suite D (Super Taco tenant space).

  It is Ramboll's understanding the building will be demolished as part of the site redevelopment plans. Abatement of all ACMs and LBP shall be conducted in accordance with all applicable laws, including guidelines of the Occupational Safety and Health Administration, prior to building repairs, renovation, demolition, or any other activities with the potential to disturb the ACM and LBP. Additional information and recommendations associated with this survey are provided in Appendix D, and should be reviewed by all persons who occupy, work in or around the building.

2. INTRODUCTION

2.1 Scope of the Assessment

Ramboll conducted a Phase I ESA of the site, relying on the sources of information noted below. The date on which the information was obtained/reviewed is also indicated in the table below.

Sources of Information Relied on for the Phase I ESA

Resource	Description	Date
Site Reconnaissance		
Site visit	Ramboll representative: Brian Cheng (photographs from the site visit are provided in Appendix A)	May 21, 2025
Interviews		
Site Representatives (year first associated with the site)	Hector Silva, Senior Property Manager with Northgate Gonzalez Real Estate, LLC (1994)	May 20, 2025
Site Owner Representative	Same as site representative(s) (see above).	See above
Governmental Agencies	In lieu of interviewing regulatory authorities, Ramboll submitted written information requests and reviewed responsive information (if provided) in accordance with procedures established by the regulatory authorities (see below).	See below
Records Review		
Environmental Database Search	Environmental Data Resources, Inc (EDR) database report (Appendix B)	May 19, 2025
Governmental and Other Online Resources	United States Environmental Protection Agency (USEPA) EnviroFacts and Enforcement and Compliance History Online databases; California Water Resources Control Board's GeoTracker (GeoTracker) website California Department of Toxic Substances Control's EnviroStor (EnviroStor) website California Geologic Energy Management Division website California Environmental Protection Agency Regulated Site Portal California DTSC Hazardous Waste Tracking System (HWTS) California Geologic Energy Management Division website National Pipeline Mapping System Public Viewer website	May 20, 2025

Sources of Information Relied on for the Phase I ESA

Resource	Description	Date
Regulatory Agency Records	Ramboll requested and received site-related information as part of the 2019 Phase I ESA effort from the following: • Riverside County Environmental Health Department (Environmental Health Department); • City of Corona Fire Department (Fire Department); • City of Corona Building Department (Building Department). In addition, Ramboll requested information from the above listed agencies for records post-2019. Additionally, building records for the site were viewed via EDR Lightbox. Lastly, Ramboll submitted a Freedom of Information Act (FOIA) request to the USEPA for information related to an adjoining property that is listed on a database (US Brownfields) noted in Section 8.2.1 of the ASTM Standard. The USEPA reported that they had no information pertaining to the listing.	May 2025
Historical Sources	Aerial photographs, topographic maps, city directory listings, Sanborn maps (as available), obtained from EDR (Appendix C).	April 2019
Physical Setting Sources	Current USGS 7.5-minute topographic map for the site and surrounding area. Geologic, hydrogeologic, and hydrologic information provided in the EDR report. and prior site assessment report noted below.	May 19, 2025
Prior Environmental Reports and Site-Related Information	Prior environmental reports and other key documentation reviewed by Ramboll (Appendix D) include: • *Phase I Environmental Site Assessment, 401, 407, 411, 413, 417, and 421 South Belle Avenue; 450 South Main Street #B; and 215 West 5th Street, Corona, California*, prepared by Ramboll, dated May 2019 (the "2019 Phase I ESA report"); and • *Asbestos and Lead-Based Paint and Lead-Glazed Ceramic Tile Survey Report, 450 S. Main Street, Corona, CA,* prepared by Masek Consulting Services, Inc. (Masek), dated May 21, 2019 (the "2019 ACM and LBP Survey report"). In addition, Ramboll requested from site representatives the environmental documents identified in Section 10.8 of the ASTM Standard. No such documents were provided or are available.	May 19, 2025

Notes:

Ramboll interviewed representatives of the site (i.e., "facility personnel") identified by the client as having good knowledge of the uses, physical characteristics, and operations of the site (i.e., "key site manager" as defined by the ASTM Standard), including information identified in Section 10.8 and Section 10.9 of the ASTM Standard. Certain follow-up discussions and communication may have been completed following the date of the initial interview.

Sources of Information Relied on for the Phase I ESA		
Resource	**Description**	**Date**
Database searches were completed for those databases required by the ASTM Standard, as well as other readily available sources. Where specified, the radius searched for each database was selected in accordance with the ASTM Standard.		

This Phase I ESA was conducted in accordance with the methodology specified in the ASTM Standard, as agreed upon by Ramboll and its client in the proposal for this assignment.

The scope of work for this assignment was expanded to include an evaluation of certain additional considerations that are not included in the ASTM Standard, including ACM[2] in site buildings, radon, water intrusion/mold, and lead-based paint. The review of additional considerations was conducted based on available information and documentation; no samples of any media were collected as part of this assignment unless explicitly stated otherwise. Any other areas referred to as non-scope considerations by the ASTM Standard not listed above were outside the scope of this assessment.

2.2 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information for the site were not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography and is affected by nearby surface water bodies. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or upgradient of the site are not considered to represent a significant contamination concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction.

2.3 Reliance and General Limitations

This report has been prepared for the exclusive use of Los Altos and Northgate Gonzalez and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current if the site visit, interviews, and regulatory database search were all performed within 180 days prior to the anticipated transaction. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties.

[2] Ramboll's review of ACM in building materials did not include a formal asbestos survey in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, and any comments in this report regarding the condition of building materials represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions. Ramboll makes no representations or warranties, express or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

Ramboll's limited review of ACM in site structures did not include a formal asbestos survey or inspection. According to federal OSHA regulations (29 CFR § 1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect ACM must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including known or suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Issues considered outside the scope of the ASTM Standard and this review include lead in drinking water, polychlorinated biphenyls (PCBs) in building materials, cultural and historic resources, ecological resources, endangered species, fire safety, and high voltage power lines.

On May 8, 2024, the USEPA formally published in the Federal Register (89 Fed. Reg. 39124) its final rule designating perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), together with their salts and structural isomers, as CERCLA hazardous substances. The rule was effective July 8, 2024. Therefore, Ramboll's assessment included consideration that PFOA, PFOS, and their salts and structural isomers are CERCLA hazardous substances. Ramboll's assessment also included review of other per- and polyfluoroalkyl substances (PFAS), to the extent identified, even if not a CERCLA hazardous substance (and thus outside the scope of the ASTM Standard). Ramboll's review is intended to provide guidance about possible current and/or historical uses of PFAS at the site based on the information available at the time of our assessment, recognizing that knowledge regarding the current and historical uses of these substances continues to evolve.[3]

[3] Ramboll's review of PFAS risks excludes certain PFAS-containing refrigerants that may be contained in on-site equipment and are gases at standard temperature and pressure (e.g., R-410A, R-134a), on the assumption that they are not expected to pose a significant site contamination risk.

3. SITE DESCRIPTION

3.1 Site Setting

The site is located northwest of the intersection of South Main Street and West 5th Street, and approximately 13 miles southwest of Riverside, California (Figure 1).

The approximately 1.5-acre site is comprised of eight parcels with the following Assessor's Parcel Numbers (APNs):

- APN: 117-142-015, an approximately 0.29-acre parcel located at 401 South Belle Avenue. This parcel is undeveloped and vacant;
- APN: 117-142-018, an approximately 0.18-acre parcel located at 407 South Belle Avenue. This parcel is undeveloped and vacant;
- APN: 117-142-019, an approximately 0.19-acre parcel located at 411 South Belle Avenue. This parcel is undeveloped and vacant;
- APN: 117-142-006, an approximately 0.08-acre parcel located at 413 South Belle Avenue. This parcel is undeveloped and vacant;
- APN: 117-142-007, an approximately 0.08-acre parcel located at 417 South Belle Avenue. This parcel is undeveloped and vacant;
- APN: 117-142-008, an approximately 0.18-acre parcel located at 421 South Belle Avenue. This parcel is undeveloped and vacant;
- APN: 117-142-009, an approximately 0.16-acre parcel located at 215 West 5th Street. This parcel is undeveloped and vacant; and
- APN: 117-142-020, an approximately 0.48-acre parcel located at 450 South Main Street. This parcel is developed with a is developed as a strip mall with an approximately 8,000-square-foot building, which is located in the southeastern portion of the site. The single-story building is occupied by a variety of retail uses including a collectibles store (Mancave Museum), a beauty salon (Carolina's Beauty Salon), a restaurant (Super Taco), and a liquor store (Jashua Liquor) (Figure 2).

It is noted that portions of West 4th Street and West 5th Street, which are located along the northern and southern site boundaries, are part of the site.

The site can be accessed from roadways in each cardinal direction; however, the strip mall parking lot is directly accessed from the southern (West 5th Street) and eastern (South Main Street) site boundaries. The access road is surfaced with asphalt and leads to one asphalt-paved parking area present east of the site building. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 647 feet near the northern boundary to 653 feet near the southwestern site boundary.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the north-northeast. Regional topography slopes gently downward to the northeast toward Flan Creek, a tributary to the Chattahoochee River.
Hydrology		
Surface Water Runoff	Visual observations	Percolates into the ground surface at unpaved areas.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	A concrete-lined stream channel located approximately three-quarters of one mile to the east at its nearest point.
Flood Plain	FEMA*; Facility personnel	Facility personnel reported no known occurrences of flooding at the site. The northwestern portion of the site is located within a 500-year flood zone.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site, although wetlands areas are present near Flan Creek approximately one-quarter mile southeast of the site. Ramboll did not identify any obvious suspected wetlands at the site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map	Based on the topographic gradient, shallow groundwater likely flows to the north. Based on information provided in the GeoTracker webpage for a property located approximately 550 feet southwest of the site, groundwater was estimated to flow to the northeast.
Depth to Groundwater	Not available	Specific information regarding depth to shallow groundwater was not readily available for the site. Based on information provided in the GeoTracker webpage for a property located approximately 550 feet southwest of the site, depth to the groundwater was measured between 125 and 130 feet below ground surface (bgs) in 2008.
On-site Wells	Facility personnel; Visual observations	There are no production, monitoring or injection wells on-site.

Physical Setting and Utility Information

Conditions	Source	Description
Nearest Groundwater Supply Wells	Database report	According to the well database report, there are nine federally registered wells present within one mile of the site, one is registered as a public supply well. 67 private or municipal wells that may be used for water supply are located within one mile of the site.
Geologic Conditions	NCSS*	Regional soils are well-drained, gravely, very fine sandy loams with moderate infiltration rates.
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	The building is heated and cooled via roof mounted units.
Electricity Supplier	Facility personnel	Southern California Edison (SCE)
Natural Gas Supplier	Facility personnel	Southern California Gas Company
Use of Fuel Oil for Building Heat	Facility personnel	No current or former use of fuel oil reported.
Water Supplier	Facility personnel	City of Corona Department of Water and Power, which obtains its water from local production wells and water that is important from the Metropolitan Water District of Southern California.
Sanitary Sewer	Facility personnel	City of Corona Department of Water and Power
Septic Systems	Facility personnel	No current or former septic systems reported.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the environmental database report.

3.2 Current Use of Site

3.2.1 Current Operations

The southeastern portion of the site is used as a retail strip mall associated with the address 450 South MainStreet. The building comprises of five commercial tenant spaces, four of which are occupied by Mancave Museum (collectibles store) located at Suite A, Carolina's Beauty Salon (beauty salon) located at Suite B, Super Taco (a fast-food restaurant), located at Suite D, and Jashua Liquor (a liquor store), located at Suite E. Suite C is currently vacant. The current site operations consist of typical retail and restaurant related activities. Operations on the site do not involve the storage any raw materials and do not involve any manufacturing or fabrication activities.

According to facility personnel, no chlorinated solvents or PFAS are currently used at the facility and the use of such chemicals would not be expected based on the nature of current site operations. Facility personnel were not aware of any historical use of chlorinated solvents or PFAS at the site. Foam-based fire suppression systems are not present at the site.

3.3 Current Uses of Adjoining Properties

The site is located in a mixed residential/commercial land use area. The nearest residential area is located directly adjacent to the north and approximately 50 feet west of the site. Based on discussions with facility personnel, Ramboll's visual observations from the site boundary and public rights-of-way, and a limited review of publicly available information, a general determination of the current use of adjacent properties was developed, as described in the table below.

Current Use of Adjacent Properties

Direction	Property/Land Use	Ramboll's Observations
North	Vacant land, beyond which are residential properties consisting of single-family homes.	No apparent exterior manufacturing or chemical storage operations were observed. Residential areas consist of single-family homes. No concerns were noted.
East	South Main Street, beyond which is the Corona Mall consisting of several commercial businesses.	
South	Citizens Business Bank and a vacant commercial building.	
West	South Belle Avenue, beyond which are residential properties consisting of single-family homes.	

Notes:

During the site visit, Ramboll walked or drove by the borders of these properties that are adjacent to the subject site. Ramboll did not enter the neighboring properties.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in May 2019 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the property, as specified by the ASTM Standard.[4] A copy of the environmental database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database search provider (Appendix B) and reviewed information available in California GeoTracker and EnviroStor databases. The site is not listed on any databases for which the ASTM Standard specifies that a review of pertinent files or regulatory records be conducted. Corona Green Alleys at 417 South Belle Avenue is, however, listed on the following other databases related to regulatory compliance: National Pollutant Discharge Elimination System, California Integrated Water Quality System, and California Environmental Reporting System. Listings on these databases, by themselves, are not necessarily indicative of contamination.

4.1.2 Database Review for Adjoining Properties

There are several listings in the database report for off-site facilities within applicable ASTM search radii. Several of these listings (i.e., RCRA hazardous waste generators, USTs, ASTs, Historical Auto Stations, Historical Dry Cleaners, compliance listings), by themselves, are not necessarily indicative of a contamination concern and, therefore, are not discussed herein and were not further evaluated for purposes of this assessment. A number of facilities appear on databases indicating potential contamination concerns (i.e., Leaking Underground Storage Tank [LUST], Voluntary Cleanup Program [VCP], Cleanup Program Site-Spills Leaks, Investigations, and Cleanups [CPS-SLIC], Brownfields [US BROWNFIELDS], and Drycleaners). Of the sites representing a potential environmental concern, Ramboll has discussed in Table 3 below only 1) facilities that are located adjoining to the site, 2) facilities that are located potentially upgradient of the site and have not been issued regulatory closure for all listings of concern, or 3) facilities that appear to present a potential risk to the site based on proximity and nature of the release(s).

[4] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Database Listings Relating to Known/Potential Releases at Adjoining Properties[1]		
Listing Name or Address and Location Relative to the Subject Site	**Summary of Information Contained in Database**	**Ramboll's Comments**
Corona RDA Main at Ramona Property 480 S Main St/599 S Ramona Ave (Adjoining to the south and east)	The property is listed in the US BROWNFIELDS database. According to the EDR report, the property was historically used for the following purposes: residential, retail, warehousing, lumber, commercial, bank, hotel, and horse stables from 1891 to 1969, and as the Corona Mall (commercial, retail, etc.) from 1960 to present. A Phase I ESA was reportedly performed in 2010. The owner of the property is listed as the City of Corona Redevelopment Agency.	Ramboll submitted a FOIA request to the USEPA office concerning any information related to the listing. The USEPA responded via an email letter stating that information regarding US BROWNFIELDS can be found on the MyProperty online database. Ramboll searched the MyProperty database and found no information pertaining to the listing. Ramboll contacted the FOIA office for assistance and spoke with FOIA representative Wendy Schumacher. Ms. Schumacher stated that it is possible that the EPA has no records for the listing, and she recommended searching the EnviroFacts database. Ramboll did not find any information pertaining to this property on the EnviroFacts database. Based on the limited amount of material released and the cross-gradient location of the property in relation to the subject site, this matter is unlikely to present a concern to the subject site.

Notes:

[1] Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table (e.g., RCRA Generator, UST, AST), as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the site.

4.1.3 Other Surrounding Properties

There are several listings in the environmental database report for non-adjoining off-site facilities within applicable ASTM search radii; however, Ramboll has not identified any properties that are likely to represent a potential contamination concern to the site.[5]

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the subject site; therefore, these properties could not be readily

[5] Ramboll considers various factors in its determination whether a non-adjoining site represents a likely risk of contaminant migration to the subject site, including (if known) the type of database on which the off-site property is listed, whether and when the listing received regulatory closure, presumed or known groundwater flow direction, available reports and documentation, and distance from the site.

mapped by the third-party provider. Because the location of these properties with respect to the subject site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the subject site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by the third-party provider; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the subject site.

4.2 Historical Uses of the Site and Adjacent Sites

4.2.1 Past Uses of the Site

The site was used for residential purposes since at least the 1890s (as depicted in Sanborn maps) until the residences were removed from the site in the late 2000s. A strip mall was constructed on the eastern half of the site in the mid-to late-1980s. The current site building has been used for commercial (retail/office/restaurant) operations from construction in the mid-to late-1980s to the present day.

A summary of Ramboll's key observations from the available historical sources is presented in the below table.

Summary of Historical Resources and Local Agency Information for the Site

Historical Source	Key Observations Regarding Site History
Sanborn Maps (1891, 1895, 1900, 1907, 1911, 1928, 1942, and 1960)	The 1895 map depicts two residences at the southeastern portion of the site, and the 1900 map depicts the same two residences and a third unmarked structure at the southeastern portion of the site. The 1907 map depicts two residences and three unmarked structures at the southeastern portion of the site, and one residence at the northwestern portion of the site. The 1911 map depicts five structures at the southeastern portion of the site (two are residences), two structures at the northern half of the site, and two residences at the southwestern portion of the site. The 1928 and 1942 maps depict eight residences across the site, three garages, and three small unmarked structures. The 1960 map depicts ten residences across the site, one store at the southern boundary, and three garages in the southern portion of the site. No concerns are noted.
Aerial Photographs (1931 to 2016) Satellite Imagery[1] (1994 to 2025)	The 1931 and 1938 maps depict at least six residences and other small structures in the northern and eastern portions of the site. The 1948 and 1953 maps depict additional residences at the southern and northern site boundaries. More residences and a commercial shop are depicted at the western and southern site boundary, respectively, by the 1959 and 1961 maps. The 1967 and 1975 maps depict a total of approximately ten residences all across the site. By the 1989 map, all except two of the structures in the eastern half of the site have been removed, and a large commercial structure is depicted on the eastern half of the site; the residences remain on the western half of the site. The 1990, 1994, and 2006 maps show the site in this general configuration. By the 2009 map, several of the residences were removed from the western half of the site. By the 2012 satellite image, all residences have been removed from the site, and only one structure (a commercial strip mall) is present on-site. The site remains in this general configuration from the 2012 imagery to the latest 2025 imagery.

Summary of Historical Resources and Local Agency Information for the Site

Historical Source	Key Observations Regarding Site History
Topographic Maps (1902 to 2012)	The maps from 1902 through 2012 show the site to be located in a developed area; however, no details are depicted on any of the maps. No concerns are noted.
City Directory Abstracts (1921, 1924, 1925, 1927, 1930, 1931, 1936, 1939, 1941, 1945, 1946, 1951, 1955, 1956, 1960, 1961, 1966, 1967, 1970, 1977, 1981, 1986, 1990, 1993, 1996, 2001, 2002, 2005, 2010, and 2014	Most listings for the site are residential, which consists of past tenants or owners. All listings for South Belle Avenue appear to be former residents. Other listings include the following: • 215 W 5th – This address includes restaurants and retail/commercial shops, such as, Advance Refrig Equip Co (1956); Clements Washer Shop (Clements Appliance) and Tony's Barber Shop (1967); Clements Appliance Center (1970); Angels Beauty Salon (1996); Leftys Restaurant (1996 and 2002); and Carolinas Beauty Salon (2002). • 450 S Main – This address includes restaurants, retail/commercial shops, and liquor store, such as, South China Chinese Restaurant, Main Street Video, Corona Liquor, and 5 Day Blinds (1990); South China Chinese Restaurant, Kens Lock and Key, and Corona Liquor (1996); Fantasy Jewels (2005); and C E I Corporation.
Tax assessor website	The tax assessor website does not provide selling and/or purchase dates for the parcels. No liens are identified for the site.
Building Permits via EDR Lightbox	417 South Belle Avenue: Building permits identified include a 2007 demolition permit for a 940 square feet residential structure. 215 West 5th Street: Building permits identified include a 2008 demolition permit for the demolition of an 1,890 square feet commercial structure. 413 South Belle Avenue: Building permits identified include a 2008 demolition permit for the demolition of a 724 square feet residential structure. 421 South Belle Avenue: Building permits identified include a 2006 demolition permit for the demolition of a 1,071 square feet residential structure. 411 South Belle Avenue: Building permits identified include a 2009 demolition permit for the demolition of a 1,786 square foot dwelling. 407 South Belle Avenue: Building permits identified include a 2007 demolition permit for the demolition of an 800 square feet residential structure. Additional permits include electrical and tenant renovations in 2003 and 2005. 450 South Main Street: Building permits identified include a 1998 permit for the installation of a fire suppression system for hood. Additional permits identified include electrical, tenant improvements, signage, and plumbing permits dated between 1993 and 2018. 401 South Belle Avenue: Building permits identified include a 1990 tenant improvement permit for a carport and a 2009 demolition permit for the demolition of a 1,472 square feet dwelling.

Summary of Historical Resources and Local Agency Information for the Site

Historical Source	Key Observations Regarding Site History
City of Corona Fire Department (Fire Department)	As part of the 2019 Phase I ESA effort, Ramboll submitted a FOIA request to the Fire Department requesting information pertaining to the site. The department responded that it had no records for the site addresses. Ramboll requested records for post-2019 from the Fire Department; the Fire Department responded that it had no records for the site addresses.
City of Corona Building Department	As part of the 2019 Phase I ESA effort, Ramboll submitted a FOIA request to the Building Department requesting information pertaining to the site. The Building Department informed Ramboll that their microfiche machine was broken, and that no copies could be made; however, records from 1990 to present were available online. Documents provided online for the site included several demolition permits, residential building permits (carport), combo legacy (building upgrade) permits, commercial building permits (hood/duct fire system), plumbing permits, electrical permits, and sign permit applications. Ramboll requested records for post-2019 from the Building Department and the microfiche files. The Building Department records included a Certificate of Occupancy dated 1987 for 450 South Main Street Unit B for a commercial building. Additional records include plumbing permits, electrical permits, signage permits, and tenant improvement permits dated back to 1957. Additionally, Ramboll reviewed records provided online for the site which included a temporary use permit for 450 South Main Street for three feather flags for Extra Mile Insurance from September 2020 to December 2020, and a utility new construction permit for traffic control near 411 South Belle Avenue dated in 2022.
Riverside County Environmental Health Department (Environmental Health Department)	As part of the 2019 Phase I ESA effort, Ramboll submitted a FOIA request to the Environmental Health Department requesting information pertaining to the site. The Environmental Health Department responded that it had no records for the site addresses. Ramboll requested records for post-2019 from the Environmental Health Department; the Environmental Health Department responded that it had no records for the site addresses.

Notes:

[1] In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.

4.2.2 Past Uses of Adjacent Sites

The properties in the vicinity of the site have primarily been used for residential purposes (north and west) and commercial purposes (south and east) since the 1930s. Ramboll did not observe obvious indications of concern on the historical sources reviewed.

4.3 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with site representatives, prior environmental assessment has been conducted at the site, as summarized below. Pertinent historical

and site-related information contained in the prior report has been incorporated into other sections of this report.

- **2019 Phase I ESA.** A Phase I ESA was conducted at the site by Ramboll in 2019, in association with due diligence activities. The 2019 Phase I report identified one Other Finding for the past agricultural/residential use of the site. This matter is further discussed in Section 6.1.

4.4 User-Provided Information

Ramboll provided Los Altos with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the property, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user was not aware of information that would indicate a diminution of property value or other environmental concern.

5. SITE OBSERVATIONS

5.1 Chemical and Petroleum Storage

5.1.1 Underground Storage Tanks (USTs)

According to site representatives, there are no current or former USTs at the site, and Ramboll identified no visual evidence of such (e.g., vent pipes, fill ports, or dispensing equipment) during the site visit or in the review of records pertaining to the site. According to the environmental database report, the site is not listed on the UST database.

5.1.2 Aboveground Storage Tanks (ASTs)

One small AST was noted at the south side of the site, west of the building. The AST, which is the property of Super Taco, contains cooking grease and oil. According to tenant representatives, the AST is periodically emptied on monthly basis or on a need-to-be basis. Site representatives indicated that there are no current or former underground transfer lines used to convey the materials from the tank. Additionally, a grease trap was observed under the sink of the kitchen area inside Super Taco. According to tenant representatives, the grease trap is emptied on a need-to-be basis. Minor straining was observed on the pavement in the vicinity of the AST containing cooking oil; however, staining did not appear to extend to any stormwater drains or unpaved surfaces. No evidence of staining was noted in the vicinity of the AST and grease traps during the site visit.

5.1.3 Other Chemical and Petroleum Containers

The use of chemicals at the site is limited to cooking products and janitorial cleaning supplies, including multi-surface cleaners and disinfectant sprays.

Wastes are collected in two dumpsters (general trash and recyclables), which are positioned on pavement west of the building. No evidence of release was observed in these areas. Chemicals are not stored in exterior areas of the site.

5.2 Other Site Reconnaissance Observations

During the site visit, Ramboll made observations of interior and exterior portions of the site to look for and identify the features, activities, uses, and conditions specified in Section 9.4 of the ASTM Standard, as discussed in the table below.

Site Reconnaissance Observations	
Conditions	**Description**
Site Utilities and Equipment	
Heating and Cooling Equipment	The building is heated and cooled via roof mounted units.
Natural Gas Service	The site is provided with natural gas service.

Site Reconnaissance Observations		
Conditions	**Description**	
Use of Fuel Oil for Building Heat	No current or former use of fuel oil for building heat.	
Foam-based Fire Suppression System	According to facility personnel, the site is not equipped with a built-in foam-based fire suppression system, and there is no indication of a former use of a foam-based fire-fighting system at the site.	
Water Supply and On-site Water Wells	City of Corona Department of Water and Power, which obtains its water from local production wells and water that is imported from the Metropolitan Water District of Southern California.	
PCB-containing Equipment	Site representatives were not aware of any on-site equipment that is known to contain PCBs. There are currently three pole-mounted transformers located northwest of the building and one pad-mounted transformer west of the building; the units are owned by SCE. The pad-mounted transformer was not labeled as to their PCB content; however, the unit was labeled with a manufacturing date of 2017. Because the units were installed after the 1979 federal ban on the manufacture of PCBs, it is unlikely that the units contain PCBs. Ramboll observed no evidence of leaks or releases from transformers or other hydraulic/electrical equipment during the site visit.	
Waste, Wastewater and Stormwater		
Waste	Hazardous and Universal	According to site representatives and based on Ramboll observations, operations at the site do not result in the generation of hazardous waste, other than the generation of limited amounts of universal waste (e.g., fluorescent light bulbs, batteries) and used cooking oil/grease.
	Nonhazardous	Nonhazardous waste generated at the site consists of general trash and recyclables. General facility trash and recyclables are collected in on-site covered dumpsters. These dumpsters are located west of the building.
	Observations	Ramboll observed no evidence of a contamination concern associated with waste storage and management at the site.
Wastewater	Sanitary	Sanitary wastewater from the site is discharged to the municipal sanitary sewer system.
	Process	Operations at the site do not generate process wastewater.
	Septic Systems	No identified current or former septic systems.
	Observations	Ramboll observed no evidence of a contamination concern associated with wastewater management at the site.
Stormwater	Management	Percolates into the ground surface at unpaved areas.

Site Reconnaissance Observations		
Conditions	**Description**	
	Observations	Ramboll observed no evidence of a contamination concern associated with stormwater management at the site.
Other Interior and Exterior Observations		
Exterior Ponds, Pits, Lagoons and Standing Surface Water	Ramboll observed no exterior ponds, pits, or lagoons.	
On-site Disposal or Fill Material	Ramboll did not observe any areas of the site indicative of on-site waste disposal or placement of fill material.	
Staining and Stressed Vegetation	Ramboll observed minor staining, likely associated with vehicle drips, in the parking lot area east of the building. In addition, Ramboll observed minor staining on the pavement in the vicinity of the AST containing cooking oil. The staining were limited in size (encompassing an area of approximately one foot by one foot) and did not extend to unpaved areas.	
Interior Drains, Sumps, Pits, and Trenches	According to site representatives and Ramboll's observations, there are no other sub-grade structures at the site (e.g., below-grade pits, below-grade oil/water separators, or trenches).	
Odors	At the time of the site visit, Ramboll did not note strong odors in interior or exterior areas at the site.	

5.3 Additional Considerations

Ramboll's scope of work also included a review of certain additional considerations that are not included within the scope of the ASTM Standard (i.e., "ASTM non-scope considerations"). A summary of Ramboll's findings for these additional considerations is provided in the table below

Review of Additional Considerations		
Consideration	**Summary of Review**	**Comments/Findings**
ACM	According to the 2019 ACM and LBP Survey report, an asbestos survey was performed in the site building in 2019. The survey included the collection and analysis of 31 samples of roof, drywall joint, floor and ceiling tile from the building. The survey identified ACMs on accessible interior and exterior building surfaces associated with the site building. The quantities are typical of	The following provides a summary of the building materials containing ACMs identified at the site: • Plastic roof cement spots at joints and penetrations at the sewer vent over Suite D and at the vent over Suite A. Approximately 85 square feet.

Review of Additional Considerations

Consideration	Summary of Review	Comments/Findings
ACRM *(Continued)*	buildings of similar use, size, and age. Refer to Appendix D for Masek's report, photographs, and sketches for additional information.	• Assumed (identified visually), if present, older layers of flooring or flooring mastic under the ceramic tile. Identified as friable or non-friable asbestos-containing waste. According to the 2019 ACM and LBP Survey report, the ACMs identified at this building can be removed and disposed of as non-friable, nonhazardous asbestos waste, with the exception of those noted above as friable materials that have been classified and should be treated as friable, hazardous asbestos waste.
Radon	Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has an average indoor basement radon level between 2 and 4 picoCuries per liter (pCi/L). According to the California Radon database, of 30 locations surveyed in the same zip code as the site, none exceeded 4pCi/L. In addition, the USEPA's surveyed 12 locations in the same zip code as the site, and found that the average radon level of a first-floor room was 0.117 pCi/L and the average radon level of a basement level was 1.700 pCi/L	The USEPA's continuous exposure limit for radon, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. The risk of exposure to radon is limited by the fact that, according to site representatives, there are no living quarters at the site.
Water Intrusion/Mold	Ramboll's scope of work included qualitative observations with respect to water intrusion and the presence of mold within the site buildings during the site visit. Ramboll did not perform a mold survey at the site; however, no significant areas of water staining or mold growth were noted at the site building.	No issues identified.
Lead-Based Paint	Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." According to the 2019 ACM and LBP Survey report, a LBP and Lead-glazed ceramic	No LBP (XRF readings greater than or equal to 1.0 milligram per square centimeter (mg/cm^2) in most places) was identified at the site building. Lead-glazed ceramic tile (XRF readings greater than or equal to 1.0 mg/cm^2) was identified as follows: • The coating and glaze on the blue decorative clay tile roof on the parapet overhang in front and on the left side.

Review of Additional Considerations

Consideration	Summary of Review	Comments/Findings
Lead-Based Paint *(Continued)*	survey was performed in the site building in 2019. The survey included the collection and analysis of 35 samples of wall, roof tile, floor tile, door, frame, railing, and window frame from the building's interior and exterior. Ramboll made limited, non-exhaustive observations of painted surfaces at the site. Site representatives indicated that no LBP surveys have been performed at the site. Painted surfaces at the site, both interior and exterior, were generally observed to be in good condition. However, Ramboll observed a few isolated areas of peeling paint, including on some machinery in the engine room of the main building.	• The tan ceramic floor tile in the dining area of Suite D (Super Taco tenant space).

Notes:

Ramboll did not conduct a comprehensive survey for any of the issues noted above. Furthermore, Ramboll's observations were inherently limited and included only non-exhaustive visual observations.

6. FINDINGS, OPINION, AND CONCLUSIONS

6.1 Discussion of Findings

Ramboll's findings, opinions, and conclusions regarding conditions at the site are presented below. The findings of this assessment are classified based on the definitions in the ASTM Standard provided in Section 8 of this report.

Facility personnel knew of no soil or groundwater contamination at the site, and Ramboll did not observe evidence of significant contamination (e.g., extensive staining on unpaved areas, spills or releases, or stressed vegetation). According to the database report and as detailed in Section 4.2., the site is not listed with active status on environmental databases that are indicative of a contamination concern. The site is currently not the subject of regulatory scrutiny or enforcement actions related to soil or groundwater conditions. Facility personnel knew of no current or former use of chlorinated solvents or PFAS. The facility's operations are not chemically intensive, and the history of the facility's operations does not indicate a soil or groundwater concern.

Ramboll identified the following findings relating to known and potential site conditions:

- **Past Use of Site.** The site was historically used for residential and small-scale agricultural purposes. The residences and farming operations may have used aboveground or underground fuel oil tanks for heating purposes and/or for farm operations/vehicle fueling. As such, during any future grading/site development activities, the contractor should be prepared to encounter potential buried underground anomalies or pockets of impacted soil. Furthermore, given the historical use of the property for agricultural purposes, there is a potential for arsenic and/or organochlorine pesticides to be present in shallow soil. In the event of any future residential use, characterization of shallow soil may be warranted. Although this matter is not considered a REC, the potential presence of these compounds in the site subsurface cannot be ruled out. Ramboll notes that the above matters are unlikely to result in regulatory scrutiny under the proposed commercial use of the site.
- **Limited Pavement Staining.** At the time of the site visit, Ramboll observed areas of pavement staining in the parking lot areas east of the building. The staining in the parking areas is likely associated with vehicle drips and encompassed an area of one foot by one foot. In addition, Ramboll observed minor staining on the pavement in the vicinity of the AST containing cooking oil, located in the southern portion of the site. The staining was limited in size (encompassing an area of approximately one foot by one foot) and did not extend to unpaved areas. Based on the limited areal extent of the staining, Ramboll considers this matter a *de minimis* condition.

6.1.1 Additional Considerations

Ramboll's scope of work was expanded to include the additional considerations identified in Section 1.3. The findings of the review of these additional considerations are provided in Section 5.3.

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether

a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on SDGs.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Ramboll made reasonable attempts to obtain such information, but it was not otherwise readily available. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions. However, Ramboll conducted interviews with representatives of Northgate Gonzalez RE, LLC with tenure at the site dating back to 1994 and reviewed other historical sources regarding former uses of the site as discussed in Section 4.2.
- Historical information, such as aerial photographs, was not readily available to characterize the site from the present back to the property's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a Sanborn map dated 1895, which shows that at least a portion of the site was already developed for residential purposes. ASTM defines residential site use as a "developed" site use.
- As it is a user requirement, Ramboll did not conduct a review of records to identify whether any environmental liens or AULs have been imposed on the site.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent SDGs.

7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

APPENDIX B
ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology "approximate minimum search distance" to refer to the radii searched in the environmental database report.

The third-party provider conducted the search of environmental databases in May 2019. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE ---------- Superfund Enterprise Management System Archive

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---------- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-LQG ---------- RCRA - Large Quantity Generators
RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List
US INST CONTROLS ---------- Institutional Controls Sites List

EXECUTIVE SUMMARY

Federal ERNS list

ERNS ---------- Emergency Response Notification System

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF ---------- Solid Waste Information System

Lists of state and tribal leaking storage tanks

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 03/27/2025 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2025 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/21/2025 has revealed that there are 13 ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 28 LUST sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/17/2025 has revealed that

there are 25 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 12/30/2024 has revealed that there is 1 PFAS ECHO site within approximately 0.25 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 3 UST FINDER sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 12 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 25 EDR Hist Auto sites within approximately 0.25 miles of the target property.

Citation: 22 CCR 15 66265.197 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.197
Violation Description: Failure to properly close a hazardous waste tank system ensuring the minimization of further maintenance and that the following requirements are met: a) the owner or operator shall remove or decontaminate all waste residues, contaminated containment system components (liners, etc.), contaminated soils, and structures and equipment contaminated with waste, and manage them as hazardous waste. The closure plan, closure activities, cost estimates for closure, and financial responsibility for tank systems shall meet all of the requirements specified in articles 7 and 8 of this chapter. b) If the owner or operator demonstrates that not all contaminated soils can be practicably removed or decontaminated as required in subsection (a) of this section, then the owner or operator shall close the tank system and perform post-closure care in accordance with the closure and post-closure care requirements that apply to landfills (section 66265.310). In addition, for the purposes of closure, post-closure, and financial responsibility, such a tank system is then considered to be a landfill, and the owner or operator shall meet all of the requirements for landfills specified in articles 7 and 8 of this chapter. c) If an owner or operator has a tank system which does not have secondary containment that meets the requirements of section 66265.193(b) through (f) and which has not been granted a variance from the secondary containment requirements in accordance with section 66265.193(g), then: 1) the closure plan for the tank system shall include both a plan for complying with subsection (a) of this section and a contingent plan for complying with subsection b) of this section; 2) a contingent post-closure plan for complying with subsection (b) of this section shall be prepared and submitted as part of the permit application; 3) the cost estimates calculated for closure and post-closure care shall reflect the costs of complying with the contingent closure plan and the contingent post-closure plan, if these costs are greater than the

Site History:	Data prior to 2005 not uploaded to GeoTracker. See case file. Assessment - September 1998 Two 10,000 gal gasoline and one 10,000 gal diesel USTs removed. Impacted soil was detected under the USTs and piping with maximum concentrations of: 12,729 ppm TPHg, 347 ppm TPHd, 120.6 ppm Benzene, 783.422 ppm Toluene, 276 ppm Ethylbenzene, 751.99 ppm Xylenes, and 903.5 ppm MTBE. May 2000 to October 2002 Six soil borings were completed and three multi-completion vapor extraction/groundwater monitoring wells, three vapor extraction wells and one vapor probe were installed. Highest soil concentrations were located south of the USTs: 8400 ppm TPHg (MW-1-55 ft), 65 ppm B (VW-1-55 ft), 310 ppm T (MW-1-55 ft), 150 ppm E (VW-1-55 ft), 590 ppm X (MW-1-55 ft), 100 ppm MTBE (VW-1-40 ft). Remediation October 1998 277.57 tons of impacted soils were excavated and removed from the site. January 2001 A soil vapor extraction (SVE) pilot test was completed. The shallow soils (34 to 54 feet below ground surface (bgs)) had a radius of influence of 10 feet and the deeper soils (60 to 80 ft bgs) had a radius of influence of 40 ft. Maximum vapor concentrations included: 20,070 ppmV TPHg (deep), 228 ppmV B (deep), 111 ppmV T (deep), 11.5 ppmV E (deep), 30 ppmV X (shallow), and 1,067 ppmV MTBE (shallow). Mass removal rates for TPHg were: 57.54 lb/day (shallow) and 61.32 lb/day (deep). April 2002 to September 2003 SVE system was operated continuously using up to 12 SVE wells. Initial vapor concentrations: 5644 ppmV TPHg, 110 ppmV B, 120 ppmV T, 13.5 ppmV E, 42.8 ppmV X, and 89 ppmV MTBE. September 2003 to May 2007 Discontinuous SVE operations were conducted including various system cycling and rebound testing events. Total number of days of SVE operation: 1017 days Total mass recovered: 14954 lb TPHg, 24 lb B, 624 lb T, 210 lb E, 1050 lb X, and 16.83 lb MTBE. Groundwater Six groundwater (GW) monitoring wells were installed at this site. Depth to GW has ranged ~110 ft bgs to ~128 ft bgs and the flow direction has ranged from west to east, but predominantly northeast to northwest. GW impacts were detected in MW-1 during the first two sampling events at maximum concentrations of 2412 ppb TPHg, 187 ppb B, 226 ppb T, 25 ppb E, 243 ppb X, and 426 ppb MTBE. This well was sampled two additional times prior to going dry and all constituents were below the detection limits for both sampling events except 20 ppb MTBE. For seven quarters, wells MW-2 and MW-3 were ND for all constituents testing. Since October 2002, the wells have been dry and unable to be sampled. Wells MW-4, MW-5 and MW-6 were installed in October 2002 and have been sampled quarterly since this time. There have not been any detections in any of these three wells since sampling was initiated. Verification June 2007 Formal SVE rebound testing was conducted. The highest individual well vapor concentrations were: 175 ppmV TPHg, ND B, 8.5 ppmV T, 3.53 ppmV E, 15.3 ppmV X, and ND MTBE. Final mass removal rates for the influent vapor stream were: 5.75 lb/day TPHg, and 0 to <0.6 lb/day BTXE & MTBE. July 2007 Four confirmation soil borings were drilled to verify subsurface conditions. Three were drilled to 80 ft bgs and one was drilled to 125 ft bgs. Impacted soils were detected between 50 and 60

PALM SPRINGS OIL #6 (Continued) **1000294437**

ft bgs in two of the borings (CB-2 and CB-3). Maximum concentrations included: 2230 ppm TPHg (CB-2-55'), ND B, 445 ppm T (CB-2-55'), 201 ppm E (CB-2-55'), 1550 ppm X (CB-2-55'), ND MTBE. August and September 2007 - SVE operated an additional 33 days and removed 277 lbs TPHg, 6.83 lb T, 3.54 lb E, 15.69 lb X were recovered. (No Benzene or MTBE was recovered during this time.) Subsurface Soil types: The uppermost unit from surface to 180 ft bgs is high clay content silts with lesser amounts of fine- to coarse-grained sand. This unit grades laterally and vertically into relatively clay-free sandand silty sand between 60 and 95 ft bgs. The second unit between approximately 95 and 130 ft bgs consists predominantly of sand and gravel with some fines. Other information: UST system currently installed and operating at the site. The piping and dispensers were replaced in June 2006 and the leak has been stopped. The site has been adequately characterized. Residual impacts remain at the site between 50 and 60 ft bgs in the soils south of the USTs (CB-2 and CB-3). The consultant concludes that the impacts are limited to a lens of low permeability silty clay within a larger sand unit and do not pose a threat to groundwater. No water wells, surface waters, or other sensitive receptors are likely to be impacted. RCDEH issued a letter requiring proper destruction of all existing wells and a site closure letter on 8/18/10. Documentation of well destructions to be submitted by 11/30/2010. As of 06/07/2012 - documentation for destruction of the wells has not been submitted to Riverside County Environmental Health. The County still requires the wells be abandoned propertly and documentation sent to our office. All monitoring and remediation wells destroyed in Aug 2014. RCDHE issued final no further action letter December 19 2014.

Environmental Interest/Information System:
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently

CHEVRON DLR, SS#9-9010, WARREN SHINE DBA (Continued) **1006805045**

implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Claim Number:	Not reported
Claim Status:	Not reported
Site History:	Release Information: In October 2008, soil samples were collected during dispenser upgrade activities. Twenty-one (21) soil samples were collected from beneath the dispensers and piping at a depth of approximately four feet below ground surface (bgs). TPHg was detected in two soil samples at a maximum concentration of 1.5 ppm. MTBE was detected in 17 of the 21 soil samples at a maximum concentration of 0.033ppm. BTEX and other fuel oxygenates were not detected in any of the soil samples. Total lead concentrations ranged from 9.5 to 52 ppm. Based on analytical results an Unauthorized Release Report (URR) was submitted on October 21, 2008. RCDEH entered the site into LOP on December 29, 2009 for further assessment. Assessment/Verification:

99010 (Continued) **S105053022**

Five soil borings (B-5 through B-9) were advanced on April 17 to 24, 2009, to depths of 40.5 to 41 feet bgs. One soil boring was advanced adjacent to each of the dispenser islands, and boring B-9 was advanced at the location of the previous UST locations. Boring B-7 was continuously cored for detailed logging. TPHg was detected in the 5 foot soil samples from soil borings B-6 and B-9 at concentrations of 0.89 ppm and 26 ppm, respectively. TPHg was not detected in any other soil sample. BTEX and fuel oxygenates were not detected in any soil samples, except MTBE was detected in boring B-9 at 5 feet at a concentration of 0.0055 ppm. Other VOCs were not detected in any of the soil samples. Analysis of the 5 foot soil sample from B-9 for total lead showed a concentration of 14 ppm.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different

CORONA MALL CHEVRON (Continued) **1000819942**

systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Violation Division:	Corona Fire Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	108122
Site Name:	Corona Car Wash
Violation Date:	05-02-2024
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	OBSERVATION: When on site employees were asked for the training records specific to the hazardous materials business plan (HMBP) and its elements, they were unfamiliar with the HMBP, and any available training records, or any training program even being implemented CORRECTIVE ACTION: Implement employee training in regard to the HMBP and its elements. Document training via employee roster with signatures, the topic covered and dates, and maintain records for no less than 3 years on site, available for inspection. To clear violation email documentation of training of employees to john.brown@coronaca.gov within 30 days of this inspection report

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Eval Date: 07-31-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: - Fire extinguishers do not have a sign due to remodeling of facility taking place. Operator stated that the signs will be put up once remodeling is completed. - EPA ID application was left on site (number is inactive). - Facility generates very minimal waste. Last pick up was in 2016 and drum was less than half full.

Background Info:	Corona Naval Weapon Station, also know as Naval Warfare Assessmen t Station (NWAS). The NWAS site was once the site of a 700-acre luxury resort built in the city of North Corona in 1928. The Navy acquired the property in 1941 and the station now occupies appro ximately 250 aacres. The Station operates telemetry missilmissil eing stations and the Tactical Aircrew Training Systems which pro vide vital training to Fleet.

Violation Date: 02-01-2017
Citation: HSC 6.7 25290.1(c), 25290.2(c), 25291(a)(2), 25292(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(c), 25290.2(c), 25291(a)(2), 25292(e)
Violation Description: Failure to maintain secondary containment (e.g. failure of secondary containment testing).
Violation Notes: Returned to compliance on 02/16/2017.
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS,

Site ID: 21771
Site Name: Corona Norco Unified School District Maintenance and Operations
Violation Date: 02-02-2021
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months

TRANSPORTATION OFFICE AT ORANGE GROVE HIGH SCHOOL (Continued) **U001569109**

thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Violation Notes: Returned to compliance on 05/28/2021. The spill container for the 87 grade tank does not hold five gallons according to the technician. Owner/operator shall have the spill bucket repaired/replaced to ensure the container holds five gallons of liquid.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/27/2025
Date Data Arrived at EDR: 04/01/2025
Date Made Active in Reports: 04/24/2025

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/27/2025

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/27/2025

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/20/2024

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS TSCA: PFAS Manufacture and Imports Information

EPA issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. EPA publishes non-confidential business information (non-CBI) and includes descriptive information about each site, corporate parent, production volume, other manufacturing information, and processing and use information.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Next Scheduled EDR Contact: 08/04/2025
Data Release Frequency: Varies

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/02/2025
Date Data Arrived at EDR: 02/04/2025

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Version Date:	2022

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

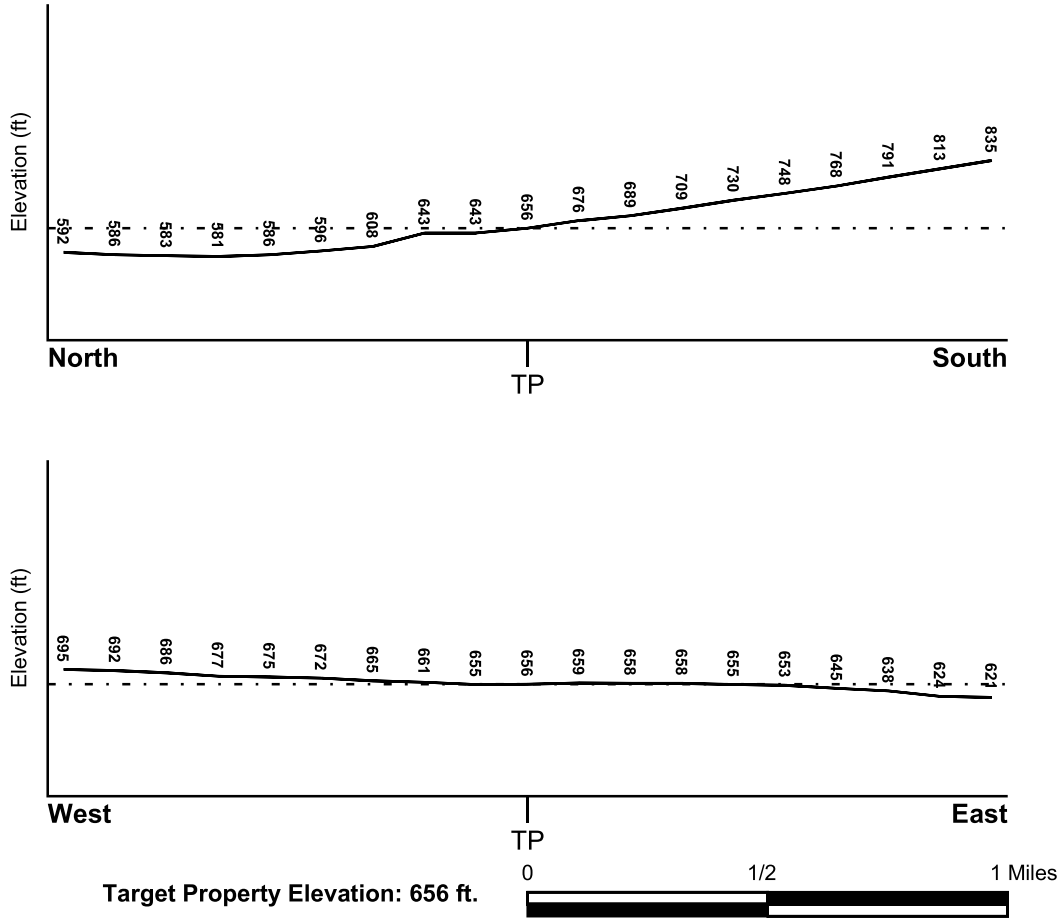
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C0689G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

06065C1356G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CORONA NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

7G	1/4 - 1/2 Mile ESE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: GARRETSON

Soil Surface Texture: gravelly very fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	gravelly very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.1
2	9 inches	53 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.1
3	53 inches	72 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

1. SUMMARY OF CONCLUSIONS

The Environment & Health group of Ramboll US Corporation (Ramboll)[1] was retained by Los Altos XX, LP (Los Altos) to perform a Phase I Environmental Site Assessment (ESA) of the Vacant Land and Retail Building property located at 401, 407, 411, 413, 417, and 421 South Belle Avenue; 450 South Main Street #B; and 215 West 5th Street in Corona, California (herein referred to as the "facility" or the "site;" Figures 1 and 2). Ramboll's assessment was conducted in connection with a potential purchase of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 2.1).

1.1 Site Summary

The approximately 1.5-acre site is improved with an approximately 8,000-square-foot building that comprises a commercial strip mall. L&S Management Company manages the center.

The site was used for residential and agricultural purposes since at least the 1890s (as depicted in Sanborn maps) through the 1980s and 2000s, when the residences were demolished. A strip mall was constructed on the eastern half of the site in the mid-to late-1980s. The current site building has been used for commercial (retail/office/restaurant) operations. The current tenants include a job placement company (Command Center), a beauty salon (Carolina's Beauty Salon), and insurance brokerage (Extra Mile Insurance), a restaurant (Super Taco) and a liquor store (Jashua Liquor).

1.2 Recognized Environmental Conditions

Ramboll has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Vacant Land and Retail Building property located at 401, 407, 411, 413, 417, and 421 South Belle Avenue; 450 South Main Street #B; and 215 West 5th Street in Corona, California. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

1.2.1 Other Findings

Ramboll identified the following "other finding" related to potential contamination concerns were identified:

- **Past Use of Site.** The site was historically used for residential and small-scale agricultural purposes. The residences and farming operations may have used aboveground or underground fuel oil tanks for heating purposes and/or for farm operations/vehicle fueling. As such, during any future grading/site development activities, the contractor should be prepared to encounter potential buried underground anomalies or pockets of impacted soil. Furthermore, given the historical use of the property for agricultural purposes, there is a potential for arsenic and/or organochlorine pesticides to be present in shallow soil. In the event of any future residential use, characterization of shallow soil may be warranted. Although this matter is not considered a REC, the potential presence of these compounds in the site subsurface cannot be ruled out. Ramboll notes that the above matters are unlikely to result in regulatory scrutiny under the proposed commercial use of the site.

[1] Ramboll was previously known as Ramboll Environ US Corporation and ENVIRON International Corporation.

1.2.2 De Minimis Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll did not identify any *de minimis* conditions during the course of this assessment.

1.2.3 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials and Lead-Based Paint.** Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll contracted with Masek Consulting Services Inc. (Masek) to conduct an asbestos and lead-based paint and lead-glazed ceramic tile survey of the site.

  The survey identified asbestos containing materials (ACMs) on accessible interior and exterior building surfaces associated with the site building. The quantities are typical of buildings of similar use, size, and age. Refer to Appendix D for Masek's report, photographs, and sketches for additional information. The following provides a summary of the building materials containing ACMs identified at the site.

  - Plastic roof cement spots at joints and penetrations at the sewer vent over Suite D and at the vent over Suite A. Approximately 85 square feet.
  - Assumed (identified visually), if present, older layers of flooring or flooring mastic under the ceramic tile. Identified as friable or non-friable asbestos-containing waste.

  According to Masek, the ACMs identified at this building can be removed and disposed of as non-friable, non-hazardous asbestos waste, with the exception of those noted above as friable materials that have been classified and should be treated as friable, hazardous asbestos waste.

  No lead-based paint (LBP) - XRF readings greater than or equal to 1.0 milligram per square centimeter (mg/cm^2) in most places, was identified at the site building.

  Lead-glazed ceramic tile (XRF readings greater than or equal to 1.0 mg/cm^2) was identified as follows:

  - The coating and glaze on the blue decorative clay tile roof on the parapet overhang in front and on the left side.
  - The tan ceramic floor tile in the dining area of Suite D (Super Taco tenant space).

  Abatement of all ACM and LBP shall be conducted in accordance with all applicable laws, including guidelines of the Occupational Safety and Health Administration, prior to building repairs, renovation, demolition, or any other activities with the potential to disturb the ACM and LBP. Additional information and recommendations associated with this survey are provided on Pages 20 through 30 of Attachment D, and should be reviewed by all persons who occupy, work in or around the building.

  A California Certified Asbestos Consultant must be used to perform abatement project planning, monitoring (including air monitoring), oversight, and reporting. The contracting company

performing asbestos abatement must be a California-licensed contractor with asbestos certification and registered with the Division of Occupational Safety and Health.

California consultants who perform lead abatement work plan preparation and abatement monitoring must be certified by California Department of Public Health (CDPH). All lead abatement must be performed by a CDPH Certified Lead Supervisor or by CDPH Certified Lead Workers under the direct supervision of a Lead Supervisor certified by CDPH.

Please note that the South Coast Air Quality Management District must be notified 10-working days prior to the commencement of any abatement activities. Additional requirements and certifications exist that will be handled by your licensed abatement contractor.

- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site; however, no significant areas of water staining or mold growth were noted at the site building.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, of 30 locations surveyed in the same zip code as the site, none exceeded 4pCi/L. In addition, the USEPA surveyed 12 locations in the same zip code as the site, and found that the average radon level of a first floor room was 0.117 pCi/L and the average radon level of a basement level was 1.700 pCi/L.

2. INTRODUCTION

2.1 Purpose

Ramboll was retained by Los Altos on to conduct a Phase I ESA of the Vacant Land and Retail Building property located at 401, 407, 411, 413, 417, and 421 South Belle Avenue; 450 South Main Street #B; and 215 West 5th Street in Corona, California. Ramboll's assessment was conducted in connection with a potential purchase of the site. The purpose of the assessment was to identify RECs, which are defined in the ASTM Standard as:

> "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

2.2 Scope of the Assessment

Ramboll completed the following tasks, consistent with the ASTM Standard, during its Phase I ESA of the property:

- A visit to the site by Michael Crews of Ramboll on May 15, 2019 to observe the exterior and interior features of the site and to identify the uses and conditions specified in the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during the site visit with the following individuals (year of initial hire at the site indicated in parentheses): Michael Hurst and Paula Evans with L&S Management Company. The aforementioned individuals are referred to herein as "facility personnel". The facility personnel interviewed by Ramboll were identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - A radius report prepared by EDR, Inc. (EDR, see Appendix B), which presents the results of searches of federal and state databases for the subject site, as well as properties near the subject site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
  - The United States Environmental Protection Agency's (USEPA's) EnviroFacts database, which provides site information contained in multiple USEPA regulatory databases.
  - A review of the California Water Resources Control Board's GeoTracker website (GeoTracker), which provides information with respect to releases to soil and groundwater in the site vicinity.
  - A review of the California Department of Toxic Substances Control's EnviroStor (EnviroStor) website, which provides information with respect to property cleanups in the site vicinity.
  - A review of the California Division of Oil, Gas, and Geothermal Resources (DOGGR) website, which provides information regarding the locations of oil and gas wells on and in the vicinity of the site.
  - The Hazardous Waste Tracking System (HWTS), an online system maintained by the DTSC to generate reports on hazardous waste generation and shipments.

- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources, including (where available) historical topographic maps and aerial photographs, city directories, and Sanborn Maps, to develop a history of the previous uses of the site and surrounding area.
  - Historical and site-specific information obtained from the following local agencies: the Riverside County Environmental Health Department (Environmental Health Department), the City of Corona Fire Department (Fire Department), and the City of Corona Building Department (Building Department).
  - A Freedom of Information Act (FOIA) request to the USEPA for information related to an adjoining property that is listed on a database (US Brownfields) noted in Section 8.2.1 of the ASTM Standard. The USEPA reported that they had no information pertaining to the listing.
- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report.
- A review of documents provided to Ramboll by facility personnel, including permits, correspondence with regulatory agencies, and chemical use information.
- A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and Los Altos and Northgate González Real Estate, Inc. (Northgate González) in April 2019. The standard ASTM scope was expanded to include an asbestos and lead-based paint survey of the buildings on-site.

2.3 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the subject site are not considered to represent a significant concern to the subject site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.
- Based on a review of current tenants at the facility and the general similarity in use and construction of the individual tenant spaces, Ramboll determined that it was not necessary to inspect each individual space. Based on a list of tenants provided by facility personnel, Ramboll

selected tenant spaces for visual review based on the potential for that tenant to manage or use hazardous materials above "*de minimis*" amounts. Ramboll has assumed that operations at other current tenant spaces are unlikely to result in the identification of RECs in connection with this review of the property.

2.4 Reliance and General Limitations

This report has been prepared for the exclusive use of Los Altos and Northgate González and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's best professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including presumed or suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include radon, lead-based paint, lead in drinking water, wetlands, PCBs in building materials, cultural and historic resources, ecological resources, endangered species, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

L&S Management Company operates the retail strip mall located in the southeastern portion of the site. The remaining portion of the site is vacant and undeveloped. The approximately 1.5-acre site is located in Corona, California (Figure 1). According to the Assessor's Office, the assessor's parcel numbers (APNs) for the site include the following:

- 401 South Belle Avenue (APN: 117-142-015)
- 407 South Belle Avenue (APN: 117-142-018)
- 411 South Belle Avenue (APN: 117-142-019)
- 413 South Belle Avenue (APN: 117-142-006)
- 417 South Belle Avenue (APN: 117-142-007)
- 421 South Belle Avenue (APN: 117-142-008)
- 450 South Main Street (APN: 117-142-020)
- 215 West 5th Street (APN: 117-142-009)

The site is developed with an approximately 8,000-square-foot building, which is located in the southeastern portion the site. The single-story building is occupied by a variety of retail uses including a job placement company (Command Center), a beauty salon (Carolina's Beauty Salon), and insurance brokerage (Extra Mile Insurance), a restaurant (Super Taco) and a liquor store (Jashua Liquor) operations (Figure 2).

The site can be accessed from roadways in each cardinal direction; however, the strip mall parking lot is directly accessed from the southern (West 5th Street) and eastern (South Main Street) site boundaries. The access road is surfaced with asphalt and leads to one asphalt-paved parking area present in the southeastern portion of the site, east of the site building. The remainder of the site consists of vacant and undeveloped grassy areas. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 647 feet near the northern boundary to 653 feet near the southwestern property boundary.
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the north-northeast. Regional topography slopes gently downward to the northeast toward Flan Creek, a tributary to the Chattahoochee River.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Hydrology		
Surface Water Runoff	Visual observations	Percolates into the ground surface at unpaved areas.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	A concrete-lined stream channel located approximately three-quarters of one mile to the east at its nearest point.
Flood Plain	FEMA*; Facility personnel	Facility personnel reported no known occurrences of flooding at the site. The northwestern portion of the site is located within a 500-year flood zone.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site, although wetlands areas are present near Flan Creek approximately one-quarter mile southeast of the site. Ramboll did not identify any obvious suspected wetlands at the site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map	Based on the topographic gradient, shallow groundwater likely flows to the north.
Depth to Groundwater	Not available	Specific information regarding depth to shallow groundwater was not readily available.
On-site Wells	Facility personnel; Visual observations	There are no production, monitoring or injection wells on-site.
Nearest Groundwater Supply Wells	Database report	Nine federally registered wells are present within one mile of the site, one is registered as a public supply well. Seven private or municipal wells that may be used for water supply are located between one-quarter mile and one mile of the site.
Geologic Conditions	NCSS*	Regional soils are well-drained, gravely, very fine sandy loams with moderate infiltration rates.
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	The building is heated and cooled via roof mounted units.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Electricity Supplier	Facility personnel	Southern California Edison (SCE)
Natural Gas Supplier	Facility personnel	Southern California Gas Company (SoCalGas)
Use of Fuel Oil for Building Heat	Facility personnel	No current or former use of fuel oil reported.
Water Supplier	Facility personnel	City of Corona Department of Water and Power, which obtains its water from local production wells and water that is important from the Metropolitan Water District of Southern California.
Sanitary Sewer	Facility personnel	City of Corona Department of Water and Power
Septic Systems	Facility personnel	No current or former septic systems reported.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey ; NWI = National Wetlands Inventory

* - Source was provided in the environmental database report.

3.2 Current Use of Property

3.2.1 Current Operations

The site consists of a retail strip mall associated with the address, 450 South Main Street, Corona, California, and is operated by L&S Management Company. The strip mall building houses five commercial tenants: Suite A - Command Center (job placement company), Suite B - Carolina's (a beauty salon), Suite C- Extra Mile Insurance (an insurance company), Suite D - Super Taco (a fast food restaurant), and Suite E - Jashua Liquor Store (a liquor store). The current site operations consist of typical retail, restaurant, and office related activities.

According to facility personnel, no chlorinated solvents are currently used at the facility and the use of such chemicals would not be expected based on the nature of current site operations. Facility personnel were not aware of any historical use of chlorinated solvents at the site.

3.2.2 Waste Management

Hazardous wastes are not routinely generated at the site, other than the generation of limited amounts of universal wastes (e.g., fluorescent light bulbs, batteries) and used cooking oil/grease.

Nonhazardous waste generated at the site consists of general trash and recyclables. General facility trash and recyclables are collected in on-site covered dumpsters. These dumpsters and compactor are positioned on pavement in the loading area north of the building.

3.2.3 Wastewater and Storm Water

Sanitary wastewater, which includes wastewater from bathroom and kitchen areas, is discharged to the municipal sanitary sewer system.

The facility does not generate process wastewater. Air compressor condensate is discharged to bare pavement outside of the building.

Storm water at the site infiltrates into the landscaped areas.

3.2.4 Air Emissions

Air emissions from the facility are limited to combustion products resulting from the operation of the site's natural-gas-fired comfort heating system.

3.3 Current Uses of Adjoining Properties

The property is located in a mixed residential/commercial land use area. The nearest residential area is located approximately 50 feet north and west of the site. Based on discussions with facility personnel, Ramboll's visual observations from the property boundary and public rights-of-way, and a limited review of publicly available information, a general determination of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties

Direction	Property/Land Use	Ramboll's Observations
North	West 4th Street and vacant land, beyond which are residential properties consisting of single-family homes.	No apparent exterior manufacturing or chemical storage operations were observed. Residential areas consist of single-family homes. No concerns were noted.
East	South Main Street, beyond which is the Corona Mall consisting of several commercial businesses.	
South	West 5th Street, beyond which is Citizens Business Bank and a vacant commercial building.	
West	South Belle Avenue, beyond which are residential properties consisting of single-family homes.	

Notes:

During the site visit, Ramboll walked or drove by the borders of these properties that are adjacent to the subject site. Ramboll did not enter the neighboring properties.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in May 2019 to prepare of summary of listings in federal and state agency databases for the site and facilities within applicable radii of the property, as specified by the ASTM standard.[2] A copy of the environmental database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database provider (see Appendix B) and also searched the California GeoTracker and EnviroStor databases. The site was not listed on any of the databases searched.

4.1.2 Database Review for Surrounding Properties

There are several listings in the database report for off-site facilities within applicable ASTM search radii. Several of these listings (i.e., RCRA hazardous waste generators, USTs, ASTs, Historical Auto Stations, Historical Dry Cleaners, compliance listings), by themselves, are not necessarily indicative of a contamination concern and, therefore, are not discussed herein and were not further evaluated for purposes of this assessment. A number of facilities appear on databases indicating potential contamination concerns (i.e., Leaking Underground Storage Tank [LUST], Voluntary Cleanup Program [VCP], Cleanup Program Site-Spills Leaks, Investigations, and Cleanups [CPS-SLIC], Brownfields [US BROWNFIELDS], and Drycleaners). Of the sites representing a potential environmental concern, Ramboll has discussed in Table 3 below only 1) facilities that are located adjoining to the site, 2) facilities that are located potentially upgradient of the site and have not been issued regulatory closure for all listings of concern, or 3) facilities that appear to present a potential risk to the site based on proximity and nature of the release(s).

[2] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 3: Summary of Pertinent Database Listings for Off-Site Properties

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
Listings for Adjoining Sites [1]		
Corona RDA Main at Ramona Property 480 S Main St/599 S Ramona Ave (Adjoining to the south and east)	The property is listed in the US BROWNFIELDS database. According to the EDR report, the property was historically used for the following purposes: residential, retail, warehousing, lumber, commercial, bank, hotel, and horse stables from 1891 to 1969, and as the Corona Mall (commercial, retail, etc.) from 1960 to present. A Phase I ESA was reportedly performed in 2010. The owner of the property is listed as the City of Corona Redevelopment Agency.	Ramboll submitted a FOIA request to the USEPA office concerning any information related to the listing. The USEPA responded via an email letter stating that information regarding US BROWNFIELDS can be found on the MyProperty online database. Ramboll searched the MyProperty database and found no information pertaining to the listing. Ramboll contacted the FOIA office for assistance and spoke with FOIA representative Wendy Schumacher. Ms. Schumacher stated that it is possible that the EPA has no records for the listing, and she recommended searching the EnviroFacts database. Ramboll did not find any information pertaining to this property on the EnviroFacts database. Based on the limited amount of material released and the cross-gradient location of the property in relation to the subject site, this matter is unlikely to present a concern to the subject site.
Listings for Non-Adjoining Sites [2]		
Private Residence – No address provided (approximately 0.17 miles southeast)	The property is listed in the LUST database for a diesel leak that potentially affected soil, which was reported in 2001. Excavation occurred in December 2001. A 2009 correspondence summarizing the situation describes the concrete tank as containing fuel for "heater pots". The tank extended from a residential property to underneath the street. The portion of the tank beneath the residential property was removed, but the portion beneath the street was left in place. The listing remains open and inactive as of November 7, 2017.	According to documents available through the California GeoTracker database, the listing is still open, but it has been inactive since November 7, 2017. Based on the limited amount of material released and the distance and cross-gradient location of the property in relation to the subject site, this matter is unlikely to present a concern to the subject site.

Table 3: Summary of Pertinent Database Listings for Off-Site Properties

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments

Notes:

[1] Ramboll's analysis of adjoining sites was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. The discussion of adjoining and non-adjoining sites does not include (if applicable) listings for certain databases that are (by themselves) not necessarily indicative of a contamination concern (e.g., compliance listings without indication of a release or chemical mishandling, such as RCRA hazardous waste generators or registered storage tanks). Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are immediately adjacent, even if separated by a road or other physical barrier.

[2] As noted in Table 1, shallow groundwater beneath the site likely flows to the north. Within this section, Ramboll did not discuss any off-site non-adjoining property that is listed on a database indicative of a contamination concern but for which regulatory closure has been issued, as the issuance of regulatory closure suggests that impacts to the subject site from the noted off-site property are unlikely. Finally, Ramboll did not discuss any off-site non-adjoining property that is presumed to be downgradient or crossgradient of the subject site. This analysis was based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, but a hazardous material can migrate in the groundwater in a generally downgradient direction; however, the direction of groundwater flow may be affected by localized topographic, hydraulic, and hydrogeologic conditions.

[3] The RGA databases are EDR proprietary databases that identify prior versions of the database in which a site was listed.

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the subject site; therefore, these properties could not be readily mapped by the third-party provider. Because the location of these properties with respect to the subject site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the subject site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by the third-party provider; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the subject site.

4.2 Historical Uses of the Site and Adjacent Sites

4.2.1 Past Uses of the Site

The site was used for residential purposes since at least the 1890s (as depicted in Sanborn maps) until the residences were removed from the site in the late 2000s. A strip mall was constructed on the eastern half of the site in the mid-to late-1980s. The current site building has been used for commercial (retail/office/restaurant) operations from construction in the mid-to late-1980s to the present day.

A summary of Ramboll's key observations from the available historical sources is presented in Table 4.

Table 4: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
Sanborn Maps (1891, 1895, 1900, 1907, 1911, 1928, 1942, and 1960)	The 1895 map depicts two residences at the southeastern portion of the site, and the 1900 map depicts the same two residences and a third unmarked structure at the southeastern portion of the site. The 1907 map depicts two residences and three unmarked structures at the southeastern portion of the site, and one residence at the northwestern portion of the site. The 1911 map depicts five structures at the southeastern portion of the site (two are residences), two structures at the northern half of the site, and two residences at the southwestern portion of the site. The 1928 and 1942 maps depict eight residences across the site, three garages, and three small unmarked structures. The 1960 map depicts ten residences across the site, one store at the southern boundary, and three garages in the southern portion of the site. No concerns are noted.
Aerial Photographs (1931 to 2016) Satellite Imagery[1] (1994 to 2018)	The 1931 and 1938 maps depict at least six residences and other small structures in the northern and eastern portions of the site. The 1948 and 1953 maps depict additional residences at the southern and northern site boundaries. More residences and a commercial shop are depicted at the western and southern site boundary, respectively, by the 1959 and 1961 maps. The 1967 and 1975 maps depict a total of approximately ten residences all across the site. By the 1989 map, all except two of the structures in the eastern half of the site have been removed, and a large commercial structure is depicted on the eastern half of the site; the residences remain on the western half of the site. The 1990, 1994, and 2006 maps show the site in this general configuration. By the 2009 map, several of the residences were removed from the western half of the site. By the 2012 satellite image, all residences have been removed from the site, and only one structure (a commercial strip mall) is present on site. The site remains in this general configuration from the 2012 imagery to the latest 2018 imagery.
Topographic Maps (1902 to 2012)	The maps from 1902 through 2012 show the site to be located in a developed area; however, no details are depicted on any of the maps. No concerns are noted.
City Directory Abstracts (1921, 1924, 1925, 1927, 1930, 1931, 1936, 1939, 1941, 1945, 1946, 1951, 1955, 1956, 1960, 1961, 1966, 1967, 1970, 1977, 1981, 1986, 1990, 1993, 1996, 2001, 2002, 2005, 2010, and 2014	Most listings for the site are residential, which consists of past tenants or owners. All listings for South Belle Avenue appear to be former residents. Other listings include the following: • 215 W 5th – This address includes restaurants and retail/commercial shops, such as, Advance Refrig Equip Co (1956); Clements Washer Shop (Clements Appliance) and Tony's Barber Shop (1967); Clements Appliance Center (1970); Angels Beauty Salon (1996); Leftys Restaurant (1996 and 2002); and Carolinas Beauty Salon (2002). • 450 S Main – This address includes restaurants, retail/commercial shops, and liquor store, such as, South China Chinese Restaurant, Main Street Video, Corona Liquor, and 5 Day Blinds (1990); South China Chinese Restaurant, Kens Lock and Key, and Corona Liquor (1996); Fantasy Jewels (2005); and C E I Corporation.
Tax assessor website	The tax assessor website does not provide selling and/or purchase dates for the parcels. No liens are identified for the site.

Table 4: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
City of Corona Fire Department	Ramboll submitted a FOIA request to the City of Corona Fire Department requesting information pertaining to the site. The department responded that it had no records for the site addresses.
City of Corona Building Department	Ramboll submitted a FOIA request to the City of Corona Building Department requesting information pertaining to the site. The department informed Ramboll that their microfiche machine was broken, and that no copies could be made; however, records from 1990 to present were available online. Documents provided online for the site included several demolition permits, residential building permits (carport), combo legacy (building upgrade) permits, commercial building permits (hood/duct fire system), plumbing permits, electrical permits, and sign permit applications.

Notes:

[1] In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.

4.2.2 Past Uses of Adjacent Sites

The properties in the vicinity of the site have primarily been used for residential purposes (north and west) and commercial purposes (south and east) since the 1930s. Ramboll did not observe obvious indications of concern on the historical sources reviewed.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in Table 5.

Table 5: Local Agency Information for the Site

Agency Contacted/ Document Reviewed	Information Obtained
Riverside County Environmental Health Department	Ramboll submitted a FOIA request to the Riverside County Environmental Health Department requesting information pertaining to the site. The department responded that it had no records for the site addresses.
City of Corona Fire Department	Ramboll submitted a FOIA request to the City of Corona Fire Department requesting information pertaining to the site. The department responded that it had no records for the site addresses.
City of Corona Building Department	Ramboll submitted a FOIA request to the City of Corona Building Department requesting information pertaining to the site. The department informed Ramboll that their microfiche machine was broken, and that no copies could be made; however, records from 1990 to present were available online. Documents provided online for the site included several demolition permits, residential building permits (carport), combo legacy (building upgrade) permits, commercial building permits (hood/duct fire system), plumbing permits, electrical permits, and sign permit applications.

4.4 Previous Environmental Assessments and Activities

No historical reports were provided to Ramboll for review.

4.5 User-Provided Information

Ramboll provided Los Altos with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the property, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user was not aware of information that would indicate a diminution of property value or other environmental concern.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on May 15, 2019. During the site visit, observations of both the interior of the building and exterior portions of the site were made to evaluate if any RECs, as defined in Section 2, are present.

5.2 General Site Setting and Observations

Ramboll made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 6. Additional information regarding observed and historical items is provided in the sections following the table.

Table 6: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the property	See Section 3.2
9.4.2.2	Past use(s) of the property	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	**Absent** (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	(see Section 5.2.2) Absent **Present**
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	**Present** (see Section 5.2.3)
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	**Present** (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	Absent
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	Absent

Table 6: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.4) **Present** Unlikely Absent Absent
Interior Issues		
9.4.3.1	Heating/cooling systems	**Present** (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	Absent
9.4.3.3	Floor drains and interior sumps	**Present** (see Section 3.2.3)
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	Absent
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	Absent
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	**Present** (see Section 5.2.5)
N/A	Lead-Based Paint	**Present** (see Section 5.2.6)
N/A	Water Intrusion	**Present** (see Section 5.2.7)

Table 6: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
N/A	Radon	**Present** (see Section 5.2.8)

Notes:

Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.

See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.

Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.

N/A – Not applicable.

5.2.1 Hazardous Substances and Petroleum Products

The use of chemicals at the site is limited to cooking products and janitorial cleaning materials. A 55-gallon drum of waste cooking oil was located at the west side of the building, outside of Super Taco.

Wastes are collected in two dumpsters (general trash and recyclables), which are positioned on pavement west of the building. No evidence of release was observed in these areas. Chemicals are not stored in exterior areas of the site.

5.2.2 Aboveground Storage Tanks

One small AST was noted at the south side of the site, west of the building. The AST, property of Super Taco, formerly contained cooking grease/oil; it is presently empty and unused.

5.2.3 Pools of Liquid, Standing Surface Water, or Sumps

During the site visit, a small puddle of water was observed beneath the unused AST. The water was reportedly from air conditioner condensate from the roof spout.

5.2.4 Polychlorinated Biphenyls

Facility personnel were not aware of on-site equipment that is known to contain polychlorinated biphenyls (PCBs). One pad-mounted transformers is present on the property and is owned by SCE. The unit is not labeled as to its PCB content. Ramboll saw no indication of leaks or releases from electrical equipment observed during the site visit.

Because the unit was installed at the time of the site development between in the mid- to late-1980s, after the 1979 federal ban on the manufacture of PCBs, it is unlikely that the unit contains PCBs.

Ramboll observed no indication of leaks or releases from electrical equipment during the site visit.

5.2.5 Asbestos Containing Materials and Lead-Based Paint Survey

Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll contracted with Masek to conduct an asbestos and lead-based paint and lead-glazed ceramic tile survey of the site. OSHA's definition of PACM is limited to thermal system insulation (TSI) and surfacing materials present in buildings constructed before 1981. Vinyl floor tiles are not considered PACM, but OSHA nonetheless requires that asphalt and vinyl floor tiles present in buildings constructed before 1981 be treated similarly to PACM. The

term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981.

The survey identified ACMs on accessible interior and exterior building surfaces associated with the site building. The quantities are typical of buildings of similar use, size, and age. Refer to Appendix D for Masek's report, photographs, and sketches for additional information. The following provides a summary of the building materials containing ACMs identified at the site.

- Plastic roof cement spots at joints and penetrations at the sewer vent over Suite D and at the vent over Suite A. Approximately 85 square feet.
- Assumed (identified visually), if present, older layers of flooring or flooring mastic under the ceramic tile. Identified as friable or non-friable asbestos-containing waste.

According to Masek, the ACMs identified at this building can be removed and disposed of as non-friable, non-hazardous asbestos waste, with the exception of those noted above as friable materials that have been classified and should be treated as friable, hazardous asbestos waste.

No lead-based paint (XRF readings greater than or equal to 1.0 milligram per square centimeter (mg/cm^2) in most places) was identified at the site building.

Lead-glazed ceramic tile (XRF readings greater than or equal to 1.0 mg/cm^2) was identified as follows:

- The coating and glaze on the blue decorative clay tile roof on the parapet overhang in front and on the left side.
- The tan ceramic floor tile in the dining area of Suite D (Super Taco tenant space).

According to Masek, abatement of all ACM and LBP shall be conducted in accordance with all applicable laws, including guidelines of the Occupational Safety and Health Administration, prior to building repairs, renovation, demolition, or any other activities with the potential to disturb the ACM and LBP. Additional information and recommendations associated with this survey are provided on Pages 20 through 30 of Attachment D, and should be reviewed by all persons who occupy, work in or around the building.

A California Certified Asbestos Consultant must be used to perform abatement project planning, monitoring (including air monitoring), oversight, and reporting. The contracting company performing asbestos abatement must be a California-licensed contractor with asbestos certification and registered with the Division of Occupational Safety and Health.

California consultants who perform lead abatement work plan preparation and abatement monitoring must be certified by California Department of Public Health (CDPH). All lead abatement must be performed by a CDPH Certified Lead Supervisor or by CDPH Certified Lead Workers under the direct supervision of a Lead Supervisor certified by CDPH.

Please note that the South Coast Air Quality Management District must be notified 10-working days prior to the commencement of any abatement activities. Additional requirements and certifications exist that will be handled by your licensed abatement contractor.

5.2.6 Water Intrusion

Ramboll did not perform a mold survey at the site; however, no significant areas of water staining or mold growth were noted at the site building.

5.2.7 Radon

Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, of 30 locations surveyed in the same zip code as the site, none exceeded 4pCi/L. In addition, the USEPA surveyed 12 locations in the same zip code as the site, and found that the average radon level of a first floor room was 0.117 pCi/L and the average radon level of a basement level was 1.700 pCi/L.

6. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Vacant Land and Retail Building property located at 401, 407, 411, 413, 417, and 421 South Belle Avenue; 450 South Main Street #B; and 215 West 5th Street in Corona, California in May 2019. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Chapter 8 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions

Ramboll has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the Vacant Land and Retail Building property located at 401, 407, 411, 413, 417, and 421 South Belle Avenue; 450 South Main Street #B; and 215 West 5th Street in Corona, California. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

6.1.2 Other Findings

Ramboll identified the following "other finding" related to potential contamination concerns were identified:

Past Use of Site. The site was historically used for residential and small-scale agricultural purposes. The residences and farming operations may have used aboveground or underground fuel oil tanks for heating purposes and/or for farm operations/vehicle fueling. As such, during any future grading/site development activities, the contractor should be prepared to encounter potential buried underground anomalies or pockets of impacted soil. Furthermore, given the historical use of the property for agricultural purposes, there is a potential for arsenic and/or organochlorine pesticides to be present in shallow soil. In the event of any future residential use, characterization of shallow soil may be warranted. Although this matter is not considered a REC, the potential presence of these compounds in the site subsurface cannot be ruled out. Ramboll notes that the above matters are unlikely to result in regulatory scrutiny under the proposed commercial use of the site.

6.1.3 De Minimis Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll did not identify any de minimis conditions during the course of this assessment.

6.1.4 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials and Lead-Based Paint.** Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll contracted with Masek to conduct an asbestos and lead-based paint and lead-glazed ceramic tile survey of the site.

The survey identified ACMs on accessible interior and exterior building surfaces associated with the site building. The quantities are typical of buildings of similar use, size, and age. Refer to Appendix D for Masek's report, photographs, and sketches for additional information. The following provides a summary of the building materials containing ACMs identified at the site.

- Plastic roof cement spots at joints and penetrations at the sewer vent over Suite D and at the vent over Suite A. Approximately 85 square feet.
- Assumed (identified visually), if present, older layers of flooring or flooring mastic under the ceramic tile. Identified as friable or non-friable asbestos-containing waste.

  According to Masek, the ACMs identified at this building can be removed and disposed of as non-friable, non-hazardous asbestos waste, with the exception of those noted above as friable materials that have been classified and should be treated as friable, hazardous asbestos waste. No lead-based paint (XRF readings greater than or equal to 1.0 milligram per square centimeter (mg/cm^2) in most places) was identified at the site building.

Lead-glazed ceramic tile (XRF readings greater than or equal to 1.0 mg/cm^2) was identified as follows:

- The coating and glaze on the blue decorative clay tile roof on the parapet overhang in front and on the left side.
- The tan ceramic floor tile in the dining area of Suite D (Super Taco tenant space).

According to Masek, abatement of all ACM and LBP shall be conducted in accordance with all applicable laws, including guidelines of the Occupational Safety and Health Administration, prior to building repairs, renovation, demolition, or any other activities with the potential to disturb the ACM and LBP. Additional information and recommendations associated with this survey are provided on Pages 20 through 30 of Attachment D, and should be reviewed by all persons who occupy, work in or around the building.

A California Certified Asbestos Consultant must be used to perform abatement project planning, monitoring (including air monitoring), oversight, and reporting. The contracting company performing asbestos abatement must be a California-licensed contractor with asbestos certification and registered with the Division of Occupational Safety and Health.

California consultants who perform lead abatement work plan preparation and abatement monitoring must be certified by California Department of Public Health (CDPH). All lead abatement must be performed by a CDPH Certified Lead Supervisor or by CDPH Certified Lead Workers under the direct supervision of a Lead Supervisor certified by CDPH.

Please note that the South Coast Air Quality Management District must be notified 10-working days prior to the commencement of any abatement activities. Additional requirements and certifications exist that will be handled by your licensed abatement contractor.

- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site; however, no significant areas of water staining or mold growth were noted at the site building.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not

commercial, properties. According to the California Radon database, of 30 locations surveyed in the same zip code as the site, none exceeded 4pCi/L. In addition, the USEPA surveyed 12 locations in the same zip code as the site, and found that the average radon level of a first floor room was 0.117 pCi/L and the average radon level of a basement level was 1.700 pCi/L.

6.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Ramboll made reasonable attempts to obtain such information, but it was not otherwise readily available. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions. However, Ramboll reviewed other historical sources regarding former uses of the property as discussed in Section 4.2.
- The microfiche machine at the City building department was broken and therefore historical permits prior to 1990 were not available for review. However, based on the other information sources reviewed, the lack of older building records is not expected to present a significant data gap.
- Historical information, such as aerial photographs, was not readily available to characterize the property from the present back to the property's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a Sanborn map dated 1895, which shows that at least a portion of the property was already developed for residential purposes. ASTM defines residential site use as a "developed" site use.
- As it is a user requirement, Ramboll did not conduct a review of records to identify whether any environmental liens or activity and use limitations (AULs) have been imposed on the site.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

8. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

APPENDIX B
ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology "approximate minimum search distance" to refer to the radii searched in the environmental database report.

The third-party provider conducted the search of environmental databases in May 2019. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/28/2019 has revealed that there are 11 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 29 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 3 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 4 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 25 EDR Hist Auto sites within approximately 0.25 miles of the target property.

PALM SPRINGS OIL #6 (Continued) **1000294437**

Local Agency: RIVERSIDE COUNTY LOP
File Location: Local Agency
Local Case Number: 9814582
Potential Media Affect: Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern: Gasoline
Site History: Data prior to 2005 not uploaded to GeoTracker. See case file. Assessment - September 1998 Two 10,000 gal gasoline and one 10,000 gal diesel USTs removed. Impacted soil was detected under the USTs and piping with maximum concentrations of: 12,729 ppm TPHg, 347 ppm TPHd, 120.6 ppm Benzene, 783.422 ppm Toluene, 276 ppm Ethylbenzene, 751.99 ppm Xylenes, and 903.5 ppm MTBE. May 2000 to October 2002 Six soil borings were completed and three multi-completion vapor extraction/groundwater monitoring wells, three vapor extraction wells and one vapor probe were installed. Highest soil concentrations were located south of the USTs: 8400 ppm TPHg (MW-1-55 ft), 65 ppm B (VW-1-55 ft), 310 ppm T (MW-1-55 ft), 150 ppm E (VW-1-55 ft), 590 ppm X (MW-1-55 ft), 100 ppm MTBE (VW-1-40 ft). Remediation October 1998 277.57 tons of impacted soils were excavated and removed from the site. January 2001 A soil vapor extraction (SVE) pilot test was completed. The shallow soils (34 to 54 feet below ground surface (bgs)) had a radius of influence of 10 feet and the deeper soils (60 to 80 ft bgs) had a radius of influence of 40 ft. Maximum vapor concentrations included: 20,070 ppmV TPHg (deep), 228 ppmV B (deep), 111 ppmV T (deep), 11.5 ppmV E (deep), 30 ppmV X (shallow), and 1,067 ppmV MTBE (shallow). Mass removal rates for TPHg were: 57.54 lb/day (shallow) and 61.32 lb/day (deep). April 2002 to September 2003 SVE system was operated continuously using up to 12 SVE wells. Initial vapor concentrations: 5644 ppmV TPHg, 110 ppmV B, 120 ppmV T, 13.5 ppmV E, 42.8 ppmV X, and 89 ppmV MTBE. September 2003 to May 2007 Discontinuous SVE operations were conducted including various system cycling and rebound testing events. Total number of days of SVE operation: 1017 days Total mass recovered: 14954 lb TPHg, 24 lb B, 624 lb T, 210 lb E, 1050 lb X, and 16.83 lb MTBE. Groundwater Six groundwater (GW) monitoring wells were installed at this site. Depth to GW has ranged ~110 ft bgs to ~128 ft bgs and the flow direction has ranged from west to east, but predominantly northeast to northwest. GW impacts were detected in MW-1 during the first two sampling events at maximum concentrations of 2412 ppb TPHg, 187 ppb B, 226 ppb T, 25 ppb E, 243 ppb X, and 426 ppb MTBE. This well was sampled two additional times prior to going dry and all constituents were below the detection limits for both sampling events except 20 ppb MTBE. For seven quarters, wells MW-2 and MW-3 were ND for all constituents testing. Since October 2002, the wells have been dry and unable to be sampled. Wells MW-4, MW-5 and MW-6 were installed in October 2002 and have been sampled quarterly since this time. There have not been any detections in any of these three wells since sampling was initiated. Verification June 2007 Formal SVE rebound testing was conducted. The highest individual well vapor concentrations were: 175 ppmV TPHg, ND B, 8.5 ppmV T, 3.53 ppmV E, 15.3 ppmV X, and ND MTBE. Final mass removal rates for the influent vapor stream were: 5.75 lb/day TPHg, and 0 to <0.6 lb/day BTXE & MTBE. July 2007 Four confirmation soil borings were drilled to verify subsurface conditions. Three were drilled to 80 ft bgs and one was drilled to 125 ft bgs. Impacted soils were detected between 50 and 60 ft bgs in two of the borings (CB-2 and CB-3). Maximum concentrations included: 2230 ppm TPHg (CB-2-55'), ND B, 445 ppm T (CB-2-55'), 201 ppm E (CB-2-55'), 1550 ppm X (CB-2-55'), ND MTBE. August and

PALM SPRINGS OIL #6 (Continued) **1000294437**

September 2007 - SVE operated an additional 33 days and removed 277 lbs TPHg, 6.83 lb T, 3.54 lb E, 15.69 lb X were recovered. (No Benzene or MTBE was recovered during this time.) Subsurface Soil types: The uppermost unit from surface to 180 ft bgs is high clay content silts with lesser amounts of fine- to coarse-grained sand. This unit grades laterally and vertically into relatively clay-free sandand silty sand between 60 and 95 ft bgs. The second unit between approximately 95 and 130 ft bgs consists predominantly of sand and gravel with some fines. Other information: UST system currently installed and operating at the site. The piping and dispensers were replaced in June 2006 and the leak has been stopped. The site has been adequately characterized. Residual impacts remain at the site between 50 and 60 ft bgs in the soils south of the USTs (CB-2 and CB-3). The consultant concludes that the impacts are limited to a lens of low permeability silty clay within a larger sand unit and do not pose a threat to groundwater. No water wells, surface waters, or other sensitive receptors are likely to be impacted. RCDEH issued a letter requiring proper destruction of all existing wells and a site closure letter on 8/18/10. Documentation of well destructions to be submitted by 11/30/2010. As of 06/07/2012 - documentation for destruction of the wells has not been submitted to Riverside County Environmental Health. The County still requires the wells be abandoned propertly and documentation sent to our office. All monitoring and remediation wells destroyed in Aug 2014. RCDHE issued final no further action letter December 19 2014.

Registry ID: 110012215744

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency:	RIVERSIDE COUNTY LOP
File Location:	Local Agency Warehouse
Local Case Number:	200828072
Potential Media Affect:	Soil
Potential Contaminants of Concern:	Gasoline
Site History:	Release Information: In October 2008, soil samples were collected during dispenser upgrade activities. Twenty-one (21) soil samples were collected from beneath the dispensers and piping at a depth of approximately four feet below ground surface (bgs). TPHg was detected in two soil samples at a maximum concentration of 1.5 ppm. MTBE was detected in 17 of the 21 soil samples at a maximum concentration of 0.033ppm. BTEX and other fuel oxygenates were not detected in any of the soil samples. Total lead concentrations ranged from 9.5 to 52 ppm. Based on analytical results an Unauthorized Release Report (URR) was submitted on October 21, 2008. RCDEH entered the site into LOP on December 29, 2009 for further assessment. Assessment/Verification: Five soil borings (B-5 through B-9) were advanced on April 17 to 24, 2009, to depths of 40.5 to 41 feet bgs. One soil boring was advanced adjacent to each of the dispenser islands, and boring B-9 was advanced at the location of the previous UST locations. Boring B-7 was continuously cored for detailed logging. TPHg was detected in the 5 foot soil samples from soil borings B-6 and B-9 at concentrations of 0.89 ppm and 26 ppm, respectively. TPHg was not detected in any other soil sample. BTEX and fuel oxygenates were not detected in any soil samples, except MTBE was detected in boring B-9 at 5 feet at a concentration of 0.0055 ppm. Other VOCs were not detected in any of the soil samples. Analysis of the 5 foot soil sample from B-9 for

CHEVRON #9-9010 (Continued) **S105053022**

total lead showed a concentration of 14 ppm.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/11/2019

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/11/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

South Map:	5636469 CORONA SOUTH, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

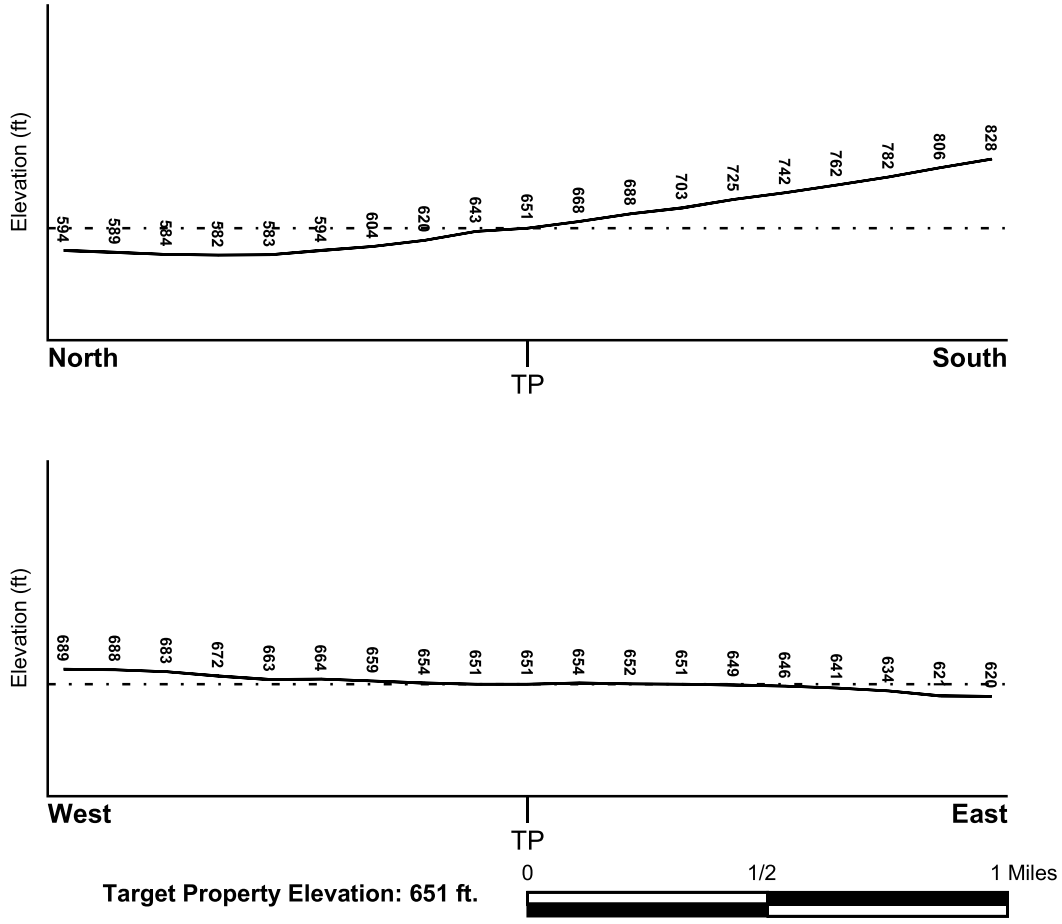
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C0689G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06071C9375H	FEMA FIRM Flood data

06065C1356G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CORONA NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
A1	1/8 - 1/4 Mile ENE	NW
A2	1/8 - 1/4 Mile ENE	NW
4	1/4 - 1/2 Mile ESE	Not Reported
10	1/2 - 1 Mile ENE	Not Reported
C11	1/2 - 1 Mile ENE	Varies

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1G	1/2 - 1 Mile ENE	Not Reported
2G	1/2 - 1 Mile ENE	Varies
3G	1/2 - 1 Mile ENE	Varies
4G	1/8 - 1/4 Mile ENE	NW
5G	1/8 - 1/4 Mile ENE	NW
7G	1/4 - 1/2 Mile ESE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: GARRETSON

Soil Surface Texture: gravelly very fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	gravelly very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.1
2	9 inches	53 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.1
3	53 inches	72 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sketch and Laboratory Report Attachments. 39

Our inspection was performed on May 15, 2019.

Anyone reading this report should read the entire report, including attachments, which are part of this report. We use "we" throughout, rather than the awkward repeating of our name.

Project-Specific Limitations

This was a limited survey. The building was still occupied during our inspection, and we could not break the ceramic tile to check if other layers of flooring might be present underneath in three suites where the floor was finished with ceramic tile throughout and in the back areas of other suites, formerly kitchen locations of the restaurants. The general limitations at the end apply to all projects.

Company Background

Since 1991 we have provided services at many thousands of properties of all types. Our goals have always been to produce superior reports, offer superior value, and provide superior service. Significantly, about 33% of our revenue has been from sub-consulting work for medium and large consulting companies who demand top quality and choose to trust us to do work for their clients. Our clients include investors, architects, lenders, attorneys, government organizations, property management firms and other consulting firms. We provide a wide range of services needed for pre-acquisition due diligence of commercial properties and for management and correction of identified hazards or deficiencies. Please visit our web site for more information: http://www.masekconsulting.net

Asbestos Survey Findings

A Friable material can be broken, crumbled, pulverized or reduced to powder by hand pressure when dry (e.g. structural fireproofing, pipe insulation, ceiling tile, ceiling texture). Non-Friable materials include items such as vinyl floor tile, mastics, plastic roof cement, stucco, drywall joint compound & texture, roofing, and sheet vinyl flooring (when in place and in good condition, friable once disturbed). A non-friable material may become friable when disturbed or deteriorated.

Homogeneous Areas and Samples

To make the following table and this report readily readable, we utilize 12 point or larger type for all but the page footers and attachments. People also do not like having to turn pages to read them, especially if they are reading a screen. For the convenience of readers, we minimize the number of columns by using convenient codes for condition, disturbance potential, friability, removal, and waste handling.

Damage may be physical, due to deterioration, or due to water. Significant Damage means 10% or more evenly distributed, or 25% or greater localized damage. Damage means less than 10% damage (e.g. abraded, gouged, blistered, peeling, crumbling). Good means no or very little damage or deterioration.

Materials may be disturbed by contact, vibration, or air erosion, and all of those possible sources

of disturbance are considered in determining if there is potential for significant damage, potential for damage, or low potential for damage.

Taking all of those factors into consideration, materials which contain asbestos (those containing over 1% asbestos are Asbestos Containing Materials) are categorized according to the following Hazard Rank scale:

worst 7 - Friable with significant damage
6a - Friable with damage and potential for significant damage
6b - Non-Friable with significant damage and potential for more significant damage
5a - Friable with damage and potential for damage
5b - Non-Friable with significant damage and potential for additional damage
5c - Non-Friable with damage and potential for significant damage
5d - Friable in good condition and potential for significant damage
4a - Non-Friable with significant damage and low potential for disturbance
4b - Friable with damage and low potential for disturbance
3a - Friable in good condition and potential for damage
3b - Non-Friable with damage and potential for damage
3c - Non-Friable in good condition and potential for significant damage
2a - Friable in good condition and low potential for disturbance
2b - Non-Friable with damage and low potential for disturbance
2c - Non-Friable in good condition and potential for damage
best 1 - Non-Friable in good condition and low potential for disturbance

Category I non-friable ACM is any asbestos-containing packing, gasket, resilient floor covering or asphalt roofing product which contains more than one percent (1%) asbestos as determined using polarized light microscopy (PLM) according to the method specified in Appendix A, Subpart F, 40 CFR Part 763. (Sec. 61.141), or assumed to be such.

Category II non-friable ACM is any material, excluding Category I non-friable ACM, containing more than one percent (1%) asbestos as determined using polarized light microscopy according to the methods specified in Appendix A, Subpart F, 40 CFR Part 763 that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure. (Sec. 61.141), or assumed to be such.

If all or portions of materials which contain asbestos are removed (using typical methods and equipment), the following Waste codes indicate how the waste should be disposed:

F - Friable, hazardous asbestos waste;

NF - Non-Friable, non-hazardous asbestos waste; or

O - EPA only requires use of PLM analysis to determine disposal requirements, but OSHA regulations regarding materials containing greater than zero, but less than 1% asbestos apply. Removal requires much of what is done for abatement. Please see the information above regarding materials reported to contain greater than zero, but less than 1% asbestos. Dispose as construction debris or non-friable asbestos waste, depending on the requirements of the landfill where the waste is disposed.

Suspect materials which are not sampled must be assumed to contain asbestos. Materials are typically assumed to contain asbestos due to the material being readily identifiable (e.g. asbestos-cement items), lack of access, or to avoid the cost of laboratory analysis for materials which commonly contain asbestos (e.g. plastic roof cement).

We generally omit the prefix of the sample numbers from the sketch(es) or drawings for clarity. Such prefixes are used solely to prevent the laboratory from accidentally mixing samples from different batches.

Please see the Scope of Services section below for information on our sampling protocols.

We use the words “roughly” or “approximately” with quantities to prevent contractor change orders for minor variations in quantity. Contractors should verify the site conditions, material location(s), and quantities to their satisfaction prior to committing to a price for removal work.

Lead-Based Paint and Lead-Glazed Ceramic Tile Survey Findings

No lead-based paint (XRF readings greater than or equal to 1.0 mg/cm^2 in most places) was identified

The lead-glazed ceramic tile (XRF readings greater than or equal to 1.0 mg/cm^2) is:

- The coating and glaze on the blue decorative clay tile roof on the parapet overhang in front and on the left side;
- The tan ceramic floor tile in the dining area of Suite D (the Taco shop)

Lead Survey Samples

A room equivalent is an identifiable part of a building (e.g., room, exterior, corridor, stairway, foyer, Etc.). Closets or other similar areas adjoining rooms are not considered as separate room equivalents unless they are obviously dissimilar from the adjoining room equivalent.

Each testing combination may be composed of more than one building component (such as two similar windows within a room equivalent).

Surfaces covered with wallpaper are assumed to be painted.

For varnished, stained, or similar clear-coated floors, measurements in only one room equivalent are permissible if it appears that the floors in the other room equivalents have the same coating.

Some testing combinations have multiple parts. For example:

- All of the parts of an interior window sash;
- All of the parts of the window frame and trim (casings, stops, jambs, aprons, Etc.);
- All of the parts of baseboard assembly (main board, quarter round, and so forth);
- All of the parts of a door (stiles, rails, panels, mullions, panels, Etc.); and,
- All of the parts of a door frame assembly (jambs, stops, transoms, casings, Etc.).

Because it is highly unlikely that all the parts would have different painting histories, they are not considered separate testing combinations, unless we have substantial evidence that different parts have separate, distinct painting histories.

When the plus or minus indication on the XRF instrument is such that adding the amount indicated to the reading would cause it to be equal to or over the positive level, we add it and report that amount.

Building Description and Photographs

The photographs are important parts of the descriptive information.

The subject property contains a strip shopping center, date of construction unknown, by appearance of it it was probably built in the 1980's and remodeled in more recent years. There are five shops in the center and it was fully occupied during our inspection. The exterior walls are finished with concrete blocks and the front parapet overhang ceiling was finished with stucco. The flat roof is finished with two layers of roll roofing and clay tile on the front roof overhang. The interior finishes are: new type, non-suspect ceiling panels, drywall, ceramic tile, vinyl tile flooring, sheet vinyl flooring and carpet. Fiberglass building insulation and fiberglass HVAC ducts were observed above the suspended ceiling panels.

Recommendations

All persons who read and use this report should read the entire report and all of the attachments.

Prior to renovation or demolition of the building, we should return to check for other flooring materials under the ceramic tile and sample any suspect materials found.

Information on laws and regulations is provided as a convenience, not as a substitute for proper legal advice and review of the entire text of the applicable laws and regulations.

Limitations of Polarized Light Microscopy (PLM) Analytical Methods

It is possible that materials reported to contain less than 1% asbestos by Polarized Light Microscopy (PLM) analysis may or may not actually contain asbestos. Non-friable Organically Bound (NOB) such as floor tiles (vinyl and asphalt), roofing materials, mastics, and caulking may contain asbestos which is tightly bound to the matrix material and therefore not easily isolated and detected by microscopy. PLM many not detect asbestos fibers less than 0.2 microns in diameter. Because asbestos fibers found in NOB materials may be less than 0.1 microns in diameter, this method can sometimes yield low estimates or even false negative results. In New York, both PLM and TEM analysis is required in order to declare that samples of NOB materials do not contain asbestos. Clients in other areas may wish to have samples of non-friable organically bound materials reported as “none detected” under PLM analysis re-analyzed by TEM.

Required Notifications

California has many Air Pollution Control Districts (APCDs) and Air Quality Management Districts (AQMDs): Amador, Antelope Valley, Bay Area, Butte, Calaveras, Colusa, Eastern Kern, El Dorado, Feather River, Glenn, Great Basin, Imperial, Lake Lassen, Mariposa, Mendocino, Modoc, Mojave Desert, Monterey Bay, North Coast, Northern Sierra, Northern Sonoma, Placer, Sacramento, San Diego, San Joaquin, San Luis Obispo, Santa Barbara, Shasta, Siskiyou, South Coast, Tehama, Tuolumne, Ventura, and Yolo-Solano. In most of them, the federal asbestos NESHAP (National Emission Standard for Hazardous Air Pollutant) provisions requiring a two week advance notification for removal of more than 160 square feet or 260 linear feet of asbestos containing materials apply. In the South Coast Air Quality Management District (SCAQMD) which encompasses Los Angeles, Orange, Riverside, and parts of San Bernardino Counties, a ten ***working day*** advance notification must be given for work on more than 100 square feet of asbestos containing material. SCAQMD has an agreement with US EPA to administer the asbestos NESHAP. Rule 1403 is their asbestos regulation regarding notification and asbestos removal and demolition work. Their Rule 222 governs use of negative air machines and HEPA vacuums for asbestos work. Before starting work, the current notification requirements should be verified. Notification is also required prior to demolition. The company or organization actually doing the work is responsible for notification.

Asbestos abatement contractors must display a posting board at each work location, and it should contain copies of their notification, license, OSHA temporary job site notification, and

other information such as the location of emergency medical facilities. Copies of the US EPA Asbestos Hazard Emergency Response Act (AHERA) training, annual asbestos worker medical exam, and latest respirator fit test report for each worker and supervisor must be on site.

Building owners must notify their employees and other owners (e.g of tenant companies) within 15 days of their knowledge of the presence of asbestos containing materials (Connelly Act, AB 3713, California Health and Safety Code, Section 25915), and annually thereafter.

Federal OSHA construction asbestos regulations, 29CFR1926.1101 (k), and the corresponding California regulations, apply to communication of hazards during construction activities.

Federal OSHA general industry asbestos regulations, 29CFR1910.1001(j)(2)(i), and the corresponding California regulations, require that building owners determine the presence, location, and quantity of materials which contain asbestos at the work site, and inform employees about the presence and location of those materials. Again, tenants are not employees. While this aspect of the regulation is widely ignored, as most commercial building have either not been inspected for asbestos, or only partially inspected, we suggest that all building owners implement an asbestos management (O&M) program based on at least a walkthrough asbestos survey. Asbestos was used in many common building materials up to the late 1980s, so having an asbestos management program in place minimizes liability and costs.

Federal OSHA general industry asbestos regulations, 29CFR1910.1001(j)(2)(iii) requires that building owners inform employers of employees, and employers inform employees who will perform housekeeping activities in areas which contain asbestos (actual or presumed) of the presence and location of those materials which may be contacted during such activities.

Federal OSHA general industry asbestos regulations, 29CFR1910.1001(j)(4)(i), and the corresponding California regulations, require that building owners or employers affix or post labels or signs so that employees will be notified of what materials contain, or are presumed to contain, asbestos. The labels are to be attached in such areas where they will clearly be noticed by employees who are likely to be exposed, such as at the entrance to mechanical room/areas. The labels must comply with the requirements of 29 CFR 1910.1200(f) of OSHA's Hazard Communication standard, and must include the following information:

DANGER

CONTAINS ASBESTOS FIBERS

AVOID CREATING DUST

CANCER AND LUNG DISEASE HAZARD

There is a slight variation in wording of the warnings in California's Connelly Act, AB 3713, California Health and Safety Code, Section 25915:

CAUTION.

ASBESTOS.

CANCER AND LUNG DISEASE HAZARD.

DO NOT DISTURB WITHOUT PROPER TRAINING AND EQUIPMENT

so we usually develop signs and labels which are a combination of the California and OSHA wording.

In a January 24, 1996 letter to Ms. Lisa K. Rushton interpreting their 29CFR1910.1101 and 29CFR1926.1101 regulations, OSHA stated: "Signs and labels are required to be posted on or near the product. However, it is generally not feasible to put labels on walls and floors. If it is not feasible, alternatives may be used. For example, if asbestos containing floors are being serviced by employees using a common equipment room day after day, then a sign or label for the asbestos flooring can be posted in that room."

California's Connelly Act, AB 3713, California Health and Safety Code, Section 25915, Sub-Section 25915.5 states: "An owner required to give notice to employees pursuant to this chapter, in addition to notifying his or her employees, shall mail, in accordance with this subdivision, a copy of that notice to all other persons who are owners of the building or part of the building, with whom the owner has privity of contract. Receipt of a notice pursuant to this section by an owner, lessee or operator shall constitute knowledge that the building contains asbestos-containing construction materials for purposes of this chapter. Notice to an owner shall be delivered by first-class mail addressed to the person and at the address designated for the receipt of notices under the lease, rental agreement, or contract with the owner. "

The California Proposition 65 notification signs which building owners (excepting many or most government buildings) should have posted on your buildings cover many materials and substances, but they are not sufficient for notifying employees or contractors working on the building.

Contractor or Employer Registration or Licensing

An employer who will be engaging in asbestos-related work involving 100 square feet or more of surface area of asbestos-containing construction material must be registered with DOSH. Asbestos abatement contractors must have this registration in addition to a contractor's license, so they are typically used to perform such work. The square footage of ACCM to be disturbed is computed by adding up the surface area of all ACCMs which will be handled during the course of the work being performed by the employer, even if it is in noncontiguous locations in all of the buildings, structures, premises, fixtures, machinery or other areas which will be handled during the course of the work for which the employer has contracted, whether pursuant to single or multiple contracts with the same hirer. This generally means that a licensed asbestos abatement contractor must be utilized, unless a particular employer feels that they will have enough asbestos work that training and equipping some of their staff and becoming registered is cost effective.

If the work involves less than 100 sq. ft. of ACCM, the employer must send a simple "report of use" to Cal/OSHA. All other occupational health and safety work rule requirements apply-

especially those from Title 8 of the California Code of Regulations, 1529. For more information about "reports of use" and the database of carcinogen use reports, call 415-703-5190. Also, see 8 CCR 5203, the Carcinogen Report of Use Requirements.

More information may be found on the DOSH web site.

OSHA Asbestos Regulations:

The federal OSHA asbestos regulations for the construction industry are contained in 29CFR1926.1101. The corresponding California regulations are at California Code of Regulations, Title 8 - Industrial Relations, Division 1- Industrial Relations, Chapter 4 - Division of Industrial Safety, Sub-chapter 4 - Construction Safety Orders, Article 4 - Dusts, Mists, Fumes, Vapors, and Gases, §§1529. Asbestos.

All of these OSHA regulations use the following definitions:

> ACM is Asbestos Containing Material (also ACBM, which is Asbestos Containing Building material)
>
> PACM is Presumed Asbestos Containing Material;
>
> Surfacing Material is material that is sprayed, troweled-on or otherwise applied to surfaces, such as acoustical plaster on ceilings and fireproofing materials on structural members; and,
>
> TSI is Thermal System Insulation (e.g. pipe and boiler insulation).

The California regulations mirror the federal OSHA regulations, and defines four classes of work on asbestos containing materials:

> "Class I asbestos work" means activities involving the removal of TSI and surfacing ACM and PACM.
>
> "Class II asbestos work" means activities involving the removal of ACM which is not thermal system insulation or surfacing material. This includes, but is not limited to, the removal of asbestos-containing wallboard, floor tile and sheeting, roofing and siding shingles, and construction mastics.
>
> "Class III asbestos work" means repair and maintenance operations, where "ACM", including TSI and surfacing ACM and PACM, is likely to be disturbed. "Disturbance" means activities that disrupt the matrix of ACM or PACM, crumble or pulverize ACM or PACM, or generate visible debris from ACM or PACM. Disturbance includes cutting away small amounts of ACM and PACM, no greater than the amount which can be contained in one standard sized glove bag or waste bag in order to access a building component. In no event shall the amount of ACM or PACM so disturbed exceed that which can be contained in one glove bag or waste bag which shall not exceed 60 inches in length and width.

"Class IV asbestos work" means maintenance and custodial activities during which employees contact but do not disturb ACM or PACM and activities to clean up dust, waste and debris resulting from Class I, II, and III activities.

The regulations require that all Class I, II and III asbestos work shall be conducted within regulated areas, with all of the related requirements for demarcation, signs, respirators, and so forth.

All asbestos work performed within regulated areas must be supervised by a competent person. A competent person for Class I and Class II work must be trained as an asbestos supervisor, as originally defined in AHERA, 40 CFR 763, which is available on the US EPA web site.

For Class III work, the competent person need only have the 16 hour training required for maintenance and custodial staff who disturb ACMs (also known as Operations & Maintenance or O&M training).

The OSHA regulations at 29CFR1926.1101(k)(9)(iii) require that training of workers for Class I operations and for Class II operations that require the use of critical barriers (or equivalent isolation methods) and/or negative pressure enclosures be the equivalent in curriculum, training method and length to the EPA Model Accreditation Plan (MAP) asbestos abatement workers training (40 CFR Part 763, subpart E, appendix C). However, 1926.1101(k)(9)(iv)(A) covering work with asbestos containing roofing materials, flooring materials, siding materials, ceiling tiles, or asbestos cement panels, allows a much shorter 8 hour training class for workers. That shorter class must include "hands-on" training and all the elements included in paragraph (k)(9)(viii) of that section, plus the specific work practices and engineering controls set forth in paragraph (g) of that section which specifically relate to the category of work to be performed.

Many private training facilities provide the asbestos supervisor and worker initial and annual refresher training classes, as well as the O&M training classes. Unless it is reasonably certain that the supervisor and workers will never need to disturb more than the small amount of ACM allowed under Class III, they need the normal AHERA supervisor and worker classes.

Despite the small size of Class III projects, they must be conducted using engineering and work practice controls which minimize the exposure to employees performing the asbestos work and to bystander employees:

(A) The work shall be performed using wet methods.

(B) To the extent feasible, the work shall be performed using local exhaust ventilation.

(C) Where the disturbance involves drilling, cutting, abrading, sanding, chipping, breaking, or sawing of thermal system insulation or surfacing material, the employer shall use impermeable drop cloths, and shall isolate the operation using mini-enclosures or glove bag systems or another isolation method.

(D) Where the employer does not produce a "negative exposure assessment" for a job, or where monitoring results show the PEL (Permissible Exposure Limit) has been exceeded, the employer shall contain the area using impermeable drop cloths and plastic

barriers or their equivalent, or shall isolate the operation using another listed and compliant control system.

(E) Employees performing Class III jobs, which involve the disturbance of thermal system insulation or surfacing material, or where the employer does not produce a "negative exposure assessment" or where monitoring results show a PEL has been exceeded, shall wear respirators which are selected, used and fitted according to the applicable regulations.

Federal OSHA published a nice informal summary of their asbestos regulations for the construction industry, publication OSHA3096, Revised in 2002. It is available online.

Lead Regulations

Three federal agencies regulate lead paint under Title X of the Housing and Community Development Act of 1992: The Environmental Protection Agency (EPA), the Department of Housing and Urban Development (HUD), and the Occupational Safety and Health Administration (OSHA). The federal lead regulations for *construction work* are contained in 29CFR1926.62 and the corresponding California regulations in CCR 8 Section 1532.1 have some additions or revisions which are not in the federal regulations.

In California, accreditation, certification, and work practices for lead-based paint and lead hazards are regulated by Title 17, California Code Of Regulations, Division 1, Chapter 8. California Senate Bill 460 amended H&SC 17920.10 by adding "lead hazards" as a violation, amended H&SC 17961 to allow local agencies to enforce 17920.10 when lead hazards are present, and amended H&SC 105251-56 making it illegal for contractors to create lead hazards and to allow local enforcement agencies to perform enforcement. In California, lead abatement work must be performed by California CDPH (formerly DHS) accredited supervisors and workers.

The action level for employee exposure to airborne lead is 30 ì g/m^3 averaged over an 8-hour day. The Permissible Exposure Limit (PEL) is 50 ì g/m^3 averaged over an 8-hour day.

If lead is present in a *construction workplace* in *any* quantity, the *construction employer* is required to make an initial determination of whether any employee's exposure to airborne lead exceeds the action level. This initial determination requires that the employer perform an exposure assessment to monitor the construction workers' exposures unless they have objective data from similar operations performed within the previous 12 months, or data from outside sources such as trade associations and suppliers. In a letter to Mr. William F. Alcarese dated September 10, 2008, federal OSHA stated that an employer working with paint which contains any amount of lead in such as way that would generate airborne levels to which employees may be exposed, must conduct exposure monitoring (or use objective or historical data to demonstrate that the action level is not exceeded.

Monitoring for an initial exposure assessment may be limited to a representative number of employees who are reasonably expected to have the highest exposure levels. Such monitoring is typically done by clipping small battery-powered air pumps to the employees' belts, with hoses running to filter cassettes clipped to the lapel of their shirts.

Some people mistakenly assume that work on materials found to contain any lead, even a low reading such as 0.18 mg/cm^2, requires use of a lead abatement contractor. That is incorrect, as abatement personnel are mainly trained to remove lead paint and ceramic tile, not to perform normal construction tasks.

There are four categories of tasks with different requirements for performing exposure assessments when lead is present and when the amount of lead is unknown:

1) For common miscellaneous construction tasks such as demolition using machinery, drilling holes through walls to run pipes or conduits, driving fasteners into surfaces, the regulations do not list any special requirements for performing exposure assessments. However, if an employer of an employee performing such a task has any reason to believe that an employee may be exposed to lead in excess of the PEL, they are required to implement the same personal protective measures as for category 2 below. It is obvious that many employers assume that employees performing such work, especially with paint containing less than 1.0 mg/cm^2 of lead, will not be exposed above the PEL.

   In California, Title 8, Section 1532.1 states that exposure assessment for such tasks is not required if data showing that the paint contains less than 600ppm of lead is available. However, that is a lesser standard than in the federal regulations, and federal OSHA, in a letter to Mr. William F. Alcarese dated September 10, 2008, states "Accordingly, for all tasks governed by OSHA's Lead in Construction standard (29 CFR 1926.62) involving paints having any level of lead, employers must comply with the assessment measures and any applicable protections of that standard." Also, data showing if the paint is above or below 600ppm of lead is usually not available, as the X-Ray Fluorescence (XRF) machines which are the normal and preferred method of testing produce results in units of milligrams per square centimeter, not ppm, and no conversion between the two units is possible.

2) For the tasks listed below, performing an exposure assessment requires that the workers involved be provided with personal protective clothing and equipment, change areas, hand washing facilities, biological monitoring (blood tests), training, and tight fitting air purifying half-face or better respirators as specified in the regulations :

   Manual demolition of structures (e.g., dry wall)

   Manual scraping;

   Manual sanding;

   Heat gun applications;

   Power tool cleaning with dust collection systems; and,

   Spray painting with lead paint;

3) For the tasks listed below, performing an exposure assessment requires that the workers involved be provided with personal protective clothing and equipment, change areas, hand washing facilities, biological monitoring (blood tests), training, and tight fitting air purifying full-face or better respiratory protection as specified in the regulations :

Using lead containing mortar;

Lead burning;

Rivet busting;

Power tool cleaning without dust collection systems;

Cleanup activities where dry expendable abrasives are used;

Abrasive blasting enclosure movement and removal;

4) For the tasks listed below, performing an exposure assessment requires that the workers involved be provided with personal protective clothing and equipment, change areas, hand washing facilities, biological monitoring (blood tests), training, and tight fitting full-face PAPR or better respiratory protection as specified in the regulations:

Abrasive blasting; and,

Welding, cutting, and torch burning.

Lead Waste Disposal

To determine if lead waste, including soil, demolition debris, and waste from lead abatement projects, is hazardous waste:

1) Sample the waste and have a laboratory perform a Total Threshold Limit Concentration (TTLC) test (preparation EPA 3050B, test method EPA 6010B). If that test indicates 1,000 parts per million (ppm) or more lead, the waste is hazardous waste.

2) If the test results indicate that the waste contains 50ppm or less of lead, it is not a hazardous waste.

3) If the waste contains 50 or more ppm of lead, but less than 1,000ppm of lead, then a California California Waste Extraction Test (WET - preparation method CAC 66261.126, test method EPA 6010B) should be performed on the waste sample.

4) If the waste exceeds the Soluble Threshold Limit Concentration (STLC) for lead of 5 ppm, it is a California hazardous waste.

Hazardous wastes must be disposed of at a hazardous waste landfill and must be hauled under a proper manifest by a licensed hazardous waste transporter.

In an E-mail message sent 5/27/2004, Mr. Charles Corcoran (Ccorcora@dtsc.ca.gov or 916-327-4499), Chief of the Waste Identification and Recycling Section of the California Department of Toxic Substances Control stated that "The waste must be classified as it will be generated. If the entire building is to be demolished, then that is the waste to be classified. In the event the whole building is demolished, if the entire waste does not exceed the 350 ppm limit [note - his E-mail was written before the 350ppm requirement expired, therefore reverting back to the 1,000 ppm TTLC and 5 ppm STLC limits] or exhibit any hazardous waste characteristic, it may be disposed to a C&D landfill. If any individual components are first removed from the building, then DTSC would consider those wastes to be separately generated and would expect the generator to characterize them as a distinct waste."

To perform the profile testing, a representative sample of the waste needs to be collected. If a whole building is to be disposed, then the sample would be of the entire debris (we would take care to avoid over or under sampling any particular building components). If the waste is a window, then some of the wood, some of the glass, and some of the putty should be included. If the waste is ceramic tile (as during a school bathroom remodeling project), then some tile, some grout, and some of the mortar needs to be included. If the waste is wood trim, then a chunk of the wood needs to be cut out. If the waste is painted concrete, then a core or chunk of the concrete needs to be collected. In all cases, the sample should approximate the proportion of lead paint / lead ceramic tile and other materials actually present in the waste. The laboratory will require that the sample they receive be pulverized.

All Field Personnel Should Have Basic Asbestos and Lead Training

All contractors working on existing buildings should see that all of their field personnel have at least the two hour asbestos awareness training, and that any of their employees who will be performing work involving spot disturbances / removal of materials which contain asbestos have the 16 hour training needed for performing OSHA Class III asbestos work. They should also see that all field personnel also have the basic training on respiratory protection needed for work with lead (they would receive this during the 16 hour asbestos training).

Exposure Assessment Programs Are Mandatory

All contractors should have well organized asbestos and lead exposure assessment programs and exposure assessment databases. Exposure assessment is mandatory, and until exposure assessment data is obtained, contractors must provide respiratory protection and other measures which could be very inconvenient, cumbersome, and expensive. Exposure assessment data is generally only good for one year, so ongoing collection of data avoids having out of date exposure assessment data. It also builds up a nice database of information to show that the contractor is in compliance with the applicable laws and regulations and that workers are not being improperly exposed.

Exposure assessment data is collected for workers with similar experience and training performing similar tasks. It is important to organize the exposure assessment data in the contractor's database by tasks and experience.

The actual data collection involves placing personal air pumps on the belts of the workers being monitored, with a filter cassette hanging over their shoulder and clipped to their collar so that it is in their "breathing zone." Asbestos exposure assessments require both 30-minute "excursion" (highest exposure) sample and 8 hour samples. Lead exposure assessments require 8 hour samples (a typical work shift. It is important to record the sample information - flow rate, work task being monitored, and worker experience. The filter cassettes should be properly labeled and are submitted to a laboratory for analysis of the lead or asbestos content.

Once initial exposure assessment data is obtained, the Contractor need only provide the respiratory protection and other measures indicated by the exposure assessment data for each task-experience combination.

The federal Occupational Safety and Health Administration (OSHA) Respiratory Protection Standard is 29 CFR 1910.134. Employees who are required to wear respirators must be provided with training on the use of the respirator, and a physical examination by a doctor to show that they are fit to wear a respirator. They must be offered a selection of respirators or different brands and sizes to find one that fits well, and must be fit tested (once per year) to see that the respirator seals well when they are wearing it.

Asbestos - The Significance, Or Not, Of The Year 1980:

There is occasionally some confusion regarding the significance of the year 1980. It is common knowledge in the asbestos consulting and abatement (removal) industries that many common asbestos containing materials (e.g. drywall joint compound, stucco, flooring materials, ducts) were used well into or throughout the1980s. Federal OSHA regulations, 29CFR1926.1101(k)(1), state:

> Employers and building owners shall identify TSI and sprayed or troweled on surfacing materials in buildings as asbestos-containing, unless they determine in compliance with paragraph (k)(5) of this section that the material is not asbestos-containing. Asphalt and vinyl flooring material installed no later than 1980 must also be considered as asbestos containing unless the employer, pursuant to paragraph (g)(8)(i)(I) of this section determines that it is not asbestos-containing.

However, the regulation then immediately goes on to state (emphasis added):

> ***If the employer/building owner has actual knowledge, or should have known through the exercise of due diligence, that other materials are asbestos-containing, they too must be treated as such. When communicating information to employees pursuant to this standard, owners and employers shall identify "PACM" as ACM.***

The exercise of due diligence would include obtaining an asbestos survey by a good consultant, and such a survey would include sampling any suspect materials installed after 1980.

Scope of Services

We performed a visual examination of those areas to determine the overall construction and usage of the building(s) and to plan and coordinate the survey work, taking into account any

information provided on the age and construction of the building(s). We examined any plans and documents supplied to us determine if any ACMs were specified and to provide information on remodeling or renovation work. Areas of potential ACM were identified using the available information on the age of the building, construction materials present and the consultant's expertise.

Asbestos Containing Materials (ACMs) Which Are Banned

It is important not to view the dates of the laws / regulations which banned the materials listed below as absolute cut-off dates. In many cases, the laws / regulations allowed suppliers to sell their existing supplies, and the manufacturers may not have immediately been aware of the new laws / regulations. For example, we have spoken with a large manufacturer of drywall joint compound in southern California and learned that they were still manufacturing drywall joint compound with asbestos in the middle 1980s. Our experience inspecting thousands of buildings of all types also confirms that asbestos containing drywall joint compound was used in many buildings constructed in the middle 1980s.

- Spray applied fireproofing was banned by the 1973 Clean Air Act (CAA) Asbestos National Emission Standard for Hazardous Air Pollutant (NESHAP);

- Wet-applied and pre-formed (molded) asbestos pipe insulation and pre-formed (molded) asbestos block insulation on boilers and hot water tanks were banned by the 1975 Clean Air Act (CAA) Asbestos National Emission Standard for Hazardous Air Pollutant (NESHAP);

- Spray applied decorative ACM (e.g. acoustic ceiling texture) was banned by the 1978 Clean Air Act (CAA) Asbestos National Emission Standard for Hazardous Air Pollutant (NESHAP);

- Patching compounds which are used to cover, seal or mask cracks, joints, holes and similar openings in the trim, walls, ceiling, etc. of building interiors (also used to create textured effects) which a consumer can purchase (those where the sale or use of the product by consumers is facilitated, and those containing respirable free form asbestos which are used in residences, schools, hospitals, public buildings or other areas where consumers have customary access) were banned by the US Consumer Product Safety Commission (CPSC) in 1978 - see 16 CFR 1304;

- Artificial emberizing materials (ash and embers) containing respirable freeform asbestos (generally packaged in an emberizing kit for use in fireplaces, and designed for use in such a manner that the asbestos fibers can become airborne under reasonably foreseeable conditions of use were banned by the US Consumer Product Safety Commission (CPSC) in 1978 - see 16 CFR 1305;

- Spray-on application of materials containing more than 1% asbestos to buildings, structures, pipes, and conduits unless the material is encapsulated with a bituminous or resinous binder during spraying and the materials are not friable after drying was banned by the 1990 Clean Air Act (CAA) Asbestos National

Emission Standard for Hazardous Air Pollutant (NESHAP);

- Asbestos paper products (flooring felt, roll board, and corrugated, commercial, or specialty paper) were banned by the Toxic Substances Control Act (TSCA) - On July 12, 1989, the US EPA issued a final rule banning most asbestos-containing products. While most of that regulation was overturned by the Fifth Circuit Court of Appeals in New Orleans in 1991, the bans on these materials were affirmed; and,

- Products that have not historically contained asbestos, otherwise referred to as "new uses" of asbestos were banned by the Toxic Substances Control Act (TSCA) - On July 12, 1989, the US EPA issued a final rule banning most asbestos-containing products. While most of that regulation was overturned by the Fifth Circuit Court of Appeals in New Orleans in 1991, the bans on these materials were affirmed.

Various asbestos containing materials were specifically listed as NOT banned by the US EPA's guidance document of May 18, 1999, but this list is far from comprehensive, as many other common materials which are not banned are not listed:

Troweled-on Surfacing Materials (e.g. cement stucco and gypsum plaster);

Asbestos-cement corrugated sheet, shingles, flat sheet, millboard, and pipe;

Asbestos clothing for adults;

Pipeline wrap;

Roofing felt;

Vinyl-asbestos floor tile;

Automatic transmission components;

Clutch facings;

Friction materials;

Brake pads, linings, and blocks;

Gaskets;

Non-roofing coatings; and,

Roof coatings.

<u>Which Materials Commonly Contain Asbestos?</u>

The list in the table below was developed based on US EPA publications and our experience performing asbestos surveys / inspections of thousands of buildings of all types.

While the production and usage of some have been banned, and most others are simply no longer produced or installed, many are still legal and new products containing asbestos could appear on the market, so this list may become out of date.

Most Common Suspect Material	Typically Friable In Place?	Notes and Approximate Usage Dates
Acoustic Ceiling Texture	Yes	Through the mid to late 1970s
Acoustic Plaster	No	Through the mid 1970s
Adhesives / Mastics (flooring, mirror, pipe insulation, etc.)	No	Through the 1980s
Asphalt Floor Tile	No	Through the 1960s
Asphalt pavement (the gravel used to make it)	No	There are substantial areas of naturally-occurring asbestos in the USA, and in recent years more has been discovered
Blown-in Insulation	Yes	Prior to the mid 1970s
Boiler and Vessel Insulation	Yes	Through the mid-1970s
Breeching / Flue Insulation	Yes	Through the mid 1970s
Caulking and Sealants	No	Through the mid-1980s
Ceiling Tiles and Lay-in or Suspended Ceiling Panels	Yes	Prior to the early 1970s, often are heavy and have a “layered” internal appearance. Newer non-suspect types are readily identified.
Concrete (especially the gravel used to make it)	No	There are substantial areas of naturally-occurring asbestos in the USA, and in recent years more has been discovered
Concrete block filler (used to smooth the rough surface)	No	Through the 1970s and into the 1980s

Most Common Suspect Material	Typically Friable In Place?	Notes and Approximate Usage Dates
Drywall (also known as Gypsum Wallboard or the brand name Sheetrock). Due to imprecise use of English, and confusion between composite and discrete layer sampling, some people may mistakenly believe that drywall itself is a suspect material. Some have loosely used the term “wallboard” to refer to asbestos-cement panels used as wall covering. Indeed, for quite a few years we sampled drywall. Finally tiring of wasting time and money sampling a material which was never, ever positive, we investigated. We discovered these problems, and a situation in which mistakes in one document (e.g. the sloppy use of the imprecise term “wallboard”) repeated in other documents. All the times we have asked, people stating that drywall might contain asbestos have not been able to produce an example of it. The drywall system is suspect, but not the gypsum board itself.		
Drywall Joint Compound, Also Known As Mud, May Also Be Used as a Skim or Texture Coat	No	Manufactured and applied through the mid-1980s. Naturally occurring asbestos in raw materials is allowed, but manufacturers avoid liability by screening raw materials.
Ducts (Made of Corrugated *Asbestos* Covered with Aluminum on the Inside and Outside, one common brand is Alumabestos)	Yes	Through the mid 1980s
Duct Insulation (corrugated or paper)	Yes	Sometimes found on register boots and ducts through the mid-1980s
Electric Wiring Insulation	Yes	Prior to the 1970s in some cables and wires, through the 1980s in some heating appliances and machinery
Electrical Panel Partitions and/or Arc Chutes	No	Used through the 1970's
Elevator Equipment Panels	No	Through the 1970's
Elevator Brake Shoes	No	Many still in use
Fiber-Cement Conduits	No	Through the 1980's
Fiber-Cement Ducts (one common brand is Transite)	No	Common for underground HVAC ducts through the 1980s
Fiber-Cement Flues (one common brand is Transite)	No	Used through the 1980s, although usage tapered off sharply after the 1970's

Most Common Suspect Material	Typically Friable In Place?	Notes and Approximate Usage Dates
Fiber-Cement Sheets - Interior, Exterior, or in Freezers/Chillers, (some made with wood paterns, one common brand is Transite)	No	Used through the 1970s, with some usage in the 1980s
Fiber-Cement Pipes (one common brand is Transite)	No	Through the 1980's and some may still be in use
Fiber-Cement Cooling Tower Slats and Other Components (one common brand is Transite)	No	Through the 1980s
Fire Blankets	Yes	Prior to the 1980s
Fire Curtains	Yes	Prior to the 1980s
Fire Door Interior Insulation	No (covered)	Through the 1970s
Fireproofing Materials (as on structural steel)	Yes	Through the mid to late 1970s
Flexible Duct Connectors (also known as vibration cloths)	Yes	Soft woven cloth, easy to differentiate from fiberglass or rubber
Gaskets	No	Still in use
Gravel	No	There are substantial areas of naturally-occurring asbestos in the USA, and in recent years more has been discovered
Electrical Ducts	No	Through the 1970s
Laboratory Hoods/Table Tops	No	Trough the 1980s
Mastics (floor tile, mirror, ceiling tile, etc.)	No	Through te 1980s
Paint - textured or elastomeric / coatings	No	Through the mid to late 1970's
Packing Materials (for valves or for wall/floor penetrations)	No	Through the 1980s
Pipe Insulation (corrugated air-cell, block, etc.)	Yes	Through the 1970s

Most Common Suspect Material	Typically Friable In Place?	Notes and Approximate Usage Dates
Plaster (interior gypsum plaster, which typically consists of two or more layers	No	Rare, used prior to the mid 1970's
Plastic Roof Cement (typically applied at flashings, joints, and penetrations, may brands are still manufactured with asbestos)	No	Very common, still legally manufactured, sold and applied
Roofing Felt / Tar paper	No	Through the 1970's and into the 1980s
Roofing Shingles or Roll Roofing	No	Through the 1970s and into the 1980s
Sheet Vinyl Flooring	No	Through the 1980s
Silver Roof Paint	No	Through the 1970s and into the 1980s
Spackling Compounds	No	Through the 1970s
Spray-Applied Insulation	Yes	Through the mid to late 1970s
Stucco, or Cement Plaster, which typically consists of two or more layers	No	Generally, used through the 1980s, but in early 2006 an Arizona regulator told us that a wholesaler in the Phoenix area imports asbestos and sells it to contractors who mix it into stucco
Tank and Vessel Insulation	Yes	Through the mid to late 1970s
Taping Compounds (drywall joint compound)	No	Through the mid 1980s
Textured Paints / Coatings (paints made with texture, not texture applied before painting)	No	Through the 1970s
Thermal Paper Products	Yes	Through the 1970s
Vinyl Floor Tile	No	Through the mid 1980s
Window Putty	No	Though the 1970s

Asbestos Sampling

Representative samples of potential / suspect ACM were collected after identification of homogeneous sampling areas (these are areas in which the materials are uniform in color, texture, construction or application date and general appearance) of potential ACM. Each

homogeneous area of potential ACM was observed for material type, location, condition, and friability. Representative samples were collected from each area of potential ACM, excepting areas which were inaccessible, or areas of assumed ACM. The building(s) was examined for the presence of previous or multiple layers of materials, if applicable. If no suspect materials were identified, or if only materials assumed to contain asbestos were identified, no samples were collected.

Most of the laws and regulations regarding asbestos sampling reference the AHERA section on sampling (40CFR763.86). We used that protocol, with additions to be more conservative, but not to overly increase the cost of asbestos surveys. Given the lack of detailed guidance in AHERA regarding miscellaneous materials, our judgement and extensive experience were important factors in determining the appropriate number of samples. For example, we know that drywall joint compound is difficult for the laboratories to analyze due to the presence of binders and such and the relatively low asbestos content, so we collect more samples from an area of it than we would from a similar area of a material such as sheet vinyl flooring which is very easy to analyze and which typically was made with a relatively high asbestos content. Of course, we do not sample non-suspect materials (see the table of suspect materials above), except for occasional samples of fiberglass-based roofing and new patterns of vinyl floor tile, as sampling avoids questions by uninformed persons and the associated delays.

Suspect materials were assumed to contain asbestos or were sampled as follows:

Friable Surfacing Material, which is a friable suspect material sprayed-on, troweled-on, or otherwise applied to surfaces, such as acoustical plaster on ceilings and fireproofing materials on structural members, or other materials on surfaces for acoustical, fireproofing, or other purposes:

- At least three bulk samples from each homogeneous area that is 1,000 ft ^{2} or less;
- At least five bulk samples from each homogeneous area that is greater than 1,000 ft ^{2} but less than or equal to 5,000 ft ^{2}; and,
- At least seven bulk samples from each homogeneous area that is greater than 5,000 ft $^{2.}$

Friable Thermal System Insulation, which is a friable suspect material applied to pipes, fittings, boilers, breeching, tanks, ducts, or other interior structural components to prevent heat loss or gain, or water condensation, or for other purposes:

- At least three bulk samples from each homogeneous area;
- At least one bulk sample from each homogeneous area of patched thermal system insulation if the patched section is less than 6 linear or square feet; and,
- In a manner sufficient to determine whether the material is ACM or not ACM, bulk samples from each insulated mechanical system where cement

or plaster is used on fittings such as tees, elbows, or valves.

Friable Miscellaneous Materials, which are interior building materials on structural components, structural members or fixtures, such as ceiling tiles:

- Bulk samples from each homogeneous area in a manner sufficient to determine whether the material is ACM or not ACM.

Nonfriable Materials which are interior building materials on structural components, structural members or fixtures, such as floor tiles:

- In a manner sufficient to determine whether the material is ACM or not ACM, bulk samples from each homogeneous area.

Sampling was done based on the friability of the material at the time of the asbestos survey.

Reasonable care was taken to reduce accidental fiber release into the building environments. In order to reduce the potential for fiber release while collecting samples of suspect materials, the test areas were sprayed with a water-containing surfactant. The tools used for collection of samples were cleaned with soapy water-soaked cloths between samples in order to avoid cross-contamination of samples. The samples were placed into heavy plastic sample bags which were then sealed and labeled. The location, type, and other information on each sample were recorded.

Asbestos Laboratory Analysis

A chain-of-custody form accompanied the samples to the laboratory. The samples were analyzed by an NVLAP accredited laboratory using the Polarized Light Method (PLM, EPA 600/R-93/116 and/or EPA 600/M4-82-020600M4). The PLM method is, by far, the most commonly used method to analyze bulk materials for the presence of asbestos. This method utilizes the optical properties of minerals to identify the selected constituent. The use of this method enables identification of the type and approximate percentage of asbestos in a given sample. The detection limit of the PLM method for asbestos identification is about one percent by volume.

Lead Survey

Suspect areas of lead (paint and ceramic tile glaze) were analyzed using non-destructive In place testing using a portable Thermo Niton 700-703ALXp portable XRF (X-Ray Fluorescence) instrument.

General Limitations

The conclusions presented in this report are professional opinions based on the indicated data described in this report. Opinions and recommendations presented herein apply to site conditions existing at the time of the site visit(s). Changes in the conditions of the property may occur with time due to natural processes or various activities on the subject property. Changes in applicable codes and standards may also occur as a result of legislation or the broadening

of knowledge. Accordingly, this report may become invalid. This report is intended only for the client, purpose, location, and project indicated. The only persons or companies which may rely on it are our client, an abatement contractor hired by our client, and the client of our client when we are sub-consultants. All others may not rely upon this report without having a contract in place with us. We do not warrant that the information supplied to us by others is accurate.

Reports such as this prepared by any consultant are never intended to be definitive studies of the presence of asbestos and/or lead at the subject properties. Other locations of asbestos and/or lead may exist at the subject property, and the levels may vary from those stated in this report. There may be variations in the composition of materials which appear similar. Materials may be hidden from view and not accessible. This is especially so for occupied structures or structures where damage and invasive sampling need to be minimized (such as structures not owned by our client).

For pre-demolition surveys of vacant buildings, we do not hesitate to examine the structure in several areas, looking for multiple layers of materials and materials which are under other materials. We very, very rarely miss anything. However, we are performing surveys, not demolition work, so may not see things such as a patch of floor tile hidden under carpeting, and not detected by our typical examination of the area under the carpet at a corner(s) or existing hole(s). We examine the structure(s) in several locations, but do not pull up all of the carpet, or cut numerous holes in floors and walls. That would constitute demolition work, not survey work, and could also create contamination due to excessive disturbances of suspect materials.

Location and sampling of underground items, such as asbestos-cement pipes, would have been outside of the scope of services for this project.

Regulatory Compliance

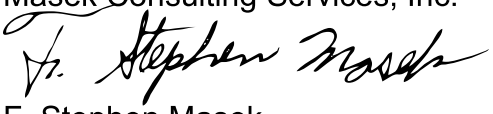
The report meets and exceeds the requirements of all applicable laws and regulations. If someone unfamiliar with our reports, after reading this entire report and all of the attachments, has any questions regarding where specific information is found, they should contact us by phone or E-mail, and we will direct them to the appropriate places in this report.

Consultant Background

The inspection and sampling portions of the survey and professional aspects of the report preparation were performed by Mr. F. Stephen Masek. Mr. Masek has performed thousands of environmental inspections in a wide variety of commercial and government buildings, including airports, military bases, high-rise buildings, apartment buildings, shopping centers, schools, office buildings, hospitals, retail buildings, factories, recreation facilities, warehouses, residences and R&D buildings. Mr. Masek has been a California Certified Asbestos Consultant since the certification program started in 1992, and has been an asbestos consultant since 1990. Mr. Masek has been a California certified lead Inspector / Risk Assessor since 1993. He has extensive experience in related environmental services. He obtained a B.S.B.A. degree from Washington University in St. Louis (1980). He is a member of Mensa, the high IQ society. As an active member of ASTM, he has contributed to the revisions to the ASTM Phase I Environmental Site Assessment Standard, was chairman of an asbestos survey task group, and helped write portions of the ASTM Property Condition Assessment standard. He has written

numerous magazine articles and has spoken at local, state, and national conventions. He also provides expert witness services.

Sincerely,
Masek Consulting Services, Inc.



F. Stephen Masek
President
California Certified Asbestos Consultant #92-0822
California Certified Lead Inspector / Risk Assessor / Project Monitor #751
Indoor Air Quality Association member
Association of Environmental Professionals member
Environmental Information Association member
ASTM International member, Committees D-22 & E-50

Sketch and Laboratory Report Attachments

The attachments are important parts of this report.

The chain of custody form(s) is/are part of the laboratory report(s), and is/are one of the pages counted in the report(s).

Avoiding laboratory bias is done by minimizing the information provided to the laboratory. Therefore, we do not give information to the laboratory about which samples are or are not homogeneous, where they were collected, the full address of the building, and the name of the owner, as such information could be the cause of laboratory bias.

A sketch follows. We generally omit the prefix of the sample numbers from the sketch for clarity. Such prefixes are used solely to prevent the laboratory from accidentally mixing samples from different batches.

The three page asbestos laboratory report, number 121902512, prepared by EMSL Analytical, Inc. follows.

APPENDIX E
QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

LEO REBELE

Principal

Mr. Rebele is a Principal in the Irvine office of Ramboll, with responsibilities that include business development, client liaison, senior oversight and execution on projects involving environmental site investigation, litigation, remediation, environmental permitting and natural resource management. Experience includes the following:

- Supported private industry for more than 25 years by delivering solutions to problems involving real estate due diligence, waterfront and brownfield redevelopment, transit-oriented development, and ports/harbors and watershed-related services. Project experience has been split between managing uplands projects focusing on property transfer/redevelopment and assisting private and port clients with aquatic-related environmental issues.
- Provided high-level strategic redevelopment consulting services to municipalities and private developers in connection with the transfer and redevelopment of contaminated real estate. Clients include residential, commercial and industrial developers, land owners, attorneys, and real estate brokers. Implementing cost recovery actions by providing environmental litigation support services; designing and implementing environmental liability transfer programs including guaranteed fixed-price remediation (GFPR) contracts.
- Provided environmental litigation support services in matters involving cost recovery actions against responsible parties. Deposition and trial experience including a landmark litigation case 3000 E. Imperial v. Robertshaw Controls et al. Routinely conducts environmental forensics analyses with a specialty in compound-specific isotope analysis (CSIA). Develops and applies multi-media video and animation for purposes of trial exhibits and mediation settlement discussions.
- Managed and supervised dozens of Phase I and II environmental site assessments (ESAs) and remediation projects throughout the western United States, Canada, and Mexico; assessed sites affected by landfill materials, chlorinated solvents, heavy metals, petroleum hydrocarbons (including free product), polychlorinated biphenyls (PCBs), and strong acids; prepared site conceptual models; performed remedial investigation/feasibility studies (RI/FSs); managed the completion of human health risk assessments; and evaluated remedial action alternatives under the Comprehensive

Environmental Response, Compensation, and Liability Act (CERCLA) and ensuring compliance with the National Contingency Plan (NCP). Regulatory negotiation/site closure experience with various jurisdictional offices of the Regional Water Quality Control Board (CRWQCB) and the California Department of Toxic Substances Control (DTSC), Orange County (California) Health Care Agency, the City and County Fire Departments of Los Angeles and the San Diego County of Environmental Health.

- Managed and provided oversight for projects involving natural resource management issues, including wetland evaluations and permitting, marine benthological studies, sediment and water quality monitoring, and underwater and eelgrass surveys. Experience has also included developing public outreach materials on behalf of private-sector clients, conducting resource mapping using Global Positioning System (GPS) software and geographic information system (GIS) technology.
- Served as program manager for several environmental impact assessments under National Environmental Policy Act (NEPA) and California Environmental Quality Act. Projects include environmental assessments (EAs) for proposed telecommunication sites on federal land, municipal well installations, private urban infill developments and mega-scale solar facilities located in Los Angeles County and San Bernardino County.

EDUCATION

1997
MS, Marine Resource Management (Minor, Aquatic Toxicology)
Oregon State University

1994
BS, Biological Oceanography (Honors)
University of British Columbia

PROJECTS

2016-2017
Environmental Oversight
Mr. Rebele served as the principal-in-charge for the environmental oversight of a sewer line replacement in an area where groundwater impacted by chlorinated volatile organic compounds (cVOCs) associated with a State Superfund site may be encountered by city workers. The scope of work involves navigating concerns of a contentious community group and ensuring the protection of City workers through the development and implementation of a field monitoring program during sewer line construction activities.

2017
Due Diligence and Environmental Compliance Review
Mr. Rebele lead a due diligence and environmental compliance team in support of an acquisition of a 700-acre terminal in the Port of Los Angeles. The work involved a comprehensive assessment of current practices involving the use, storage and disposal of hazardous materials, compliance with air and stormwater regulations, and a review of historical spills and cleanup activities. A Phase I Environmental Site Assessment was conducted as part of the review. A review of California Environmental Quality Act (CEQA) permitting issues was also performed to evaluate the potential for terminal expansion onto an unoccupied portion of the facility.

2017

Pilot Testing and Support of Guaranteed Fixed Price Remediation Program

Mr. Rebele is heading a comprehensive site investigation and pilot test to evaluate a proposed groundwater and soil remediation strategy in support of a guaranteed fixed-price remediation (GFPR) strategy. The property, which is being sold to an industrial developer, is impacted by moderated levels of trichloroethylene and perchloroethylene in groundwater, with impacts extending off-site. Concentrations of chlorinated VOCs in soil vapor beneath the manufacturing facility were found to be very high, requiring immediate mitigation. Mr. Rebele is leading the project team to develop a groundwater remedy under a possible GFPR contract option while designing soil vapor extraction and vapor mitigation system that can be implemented in the short term.

2016->>>

Implementation of Mitigation Monitoring, New Residential Development

Mr. Rebele served as principal-in-charge for a project involving implementing mitigation monitoring requirements for biological and cultural resources under California Environmental Quality Act (CEQA). Work included conducting ongoing monitoring for cultural and biological resources during disturbance of native soils during grading for a new residential development. Challenges included working with changing client schedules and interfacing with regulatory personnel to keep the project on-track on-schedule.

2016->>>

Redevelopment of former ITT Site into new Industrial Complex

Lead consultant for a high-profile industrial redevelopment project in Santa Ana, California. The project involves assisting the prospective developer with the pre-bid due diligence during the seller's auction, evaluating seller's proposed remedial strategy in the context of the proposed development, performing Phase I and II environmental assessments, regulatory agency negotiation, and the design of a vapor mitigation system. Complexities in the due diligence activities include the integration of a polychlorinated biphenyl (PCB) cap into the proposed development and integrating the proposed electrical resistance heating/steam injection remedial program with client's development plans.

2016-2017

Implementation of Soil Management Plan and Soil Stockpile Profiling for Residential Development Project

Mr. Rebele served as client services manager for a project involving the redevelopment of a former foundry and iron works facility. The soils beneath the property were identified though a combined Phase I/II Environmental Site Assessment to be impacted with Cal-Hazardous levels of lead. A combination of field screening using a portable X-Ray Fluorescence (XRF) meter and confirmation soil sampling with formal laboratory analysis in order to profile soils to be exported and to establish residual concentrations in soils. Cost effective management of soils was achieved through carefully interfacing with the client's grading contractor and project phasing.

2015->>>

Innovative In-Situ Remediation of Chlorinated Solvents

Account manager for Griffon Corporation to remediate a chlorinated VOC plume in groundwater which is commingled with chlorinated solvent plumes on adjacent properties. The remediation is confounded by access restrictions associated with a storm channel and two sewer lines. In addition two distinct groundwater mounds resulting from leaks in the sewer lines are affecting the groundwater flow and distribution of the contamination. Mr. Rebele is overseeing the forensic evaluation of sources of VOCs, general strategy, remedial approach and is leading regulatory negotiations.

2015-2017

In-situ Capping of Heavy Metal Impacted Soils

For this former tool manufacturing facility (Union Fork and Hoe Company) in upstate New York, Mr. Rebele served as project principal and client service manager. The site, which has been under the

oversight of the New York State Department of Environmental Conservation (NYSDEC) and Department of Environmental Health. Mr. Rebele helped Griffon negotiate a capping remedy of the heavy metals impacted soil. A significant component of the work has been negotiating with NYSDEC and DOH to eliminate a mature wooded area from the remediation area and to reduce the long-term groundwater monitoring obligations.

2005->>>

Ongoing Brownfield Advisory and Consulting Services

Serves in a strategic consulting role on behalf of the City for the remediation and brownfield planning of a 170-acre downtown core area targeted for redevelopment. Work to date has included federal and state brownfield grant procurement and execution, brownfield inventory, development of a GIS system, development of an area-wide brownfield remediation strategy, Phase I and II Environmental Site Assessments, development of multiple remedial action plans under the oversight of the Department of Toxic Substances Control, litigation support for cleanup cost recovery, and waste to energy (WTE) consulting.

2007->>>

Alameda Triangle Redevelopment

Provided oversight and consulting services for an 11.2 acre project comprised of 5 parcels with multiple ownerships and a history of manufacture use dating to World War II. The property uses identified including a former Witco chemical facility located on Caltrans property, a Magnetek transformer repair and refurbishment business, two auto-wrecking yards, a former railroad right-of-way, and a variety of other uses involving the manufacture and use of various chemical materials. The chemicals detected on-site during Gannett Fleming and other site investigations included organochlorine pesticides, PCBs, free product petroleum hydrocarbons in groundwater and soil, chlorinated VOCs in soil and soil vapor, heavy metals and polynuclear aromatic hydrocarbons. The City is in the process of marketing the site for development. Following a multi-media investigation involving substantial site access coordination, Gannett Fleming prepared a Site Investigation Report, Feasibility Study and a Remedial Action Plan (RAP) for the entire Site. The reports were submitted to Department of Toxic Substances Control (DTSC) for review. Gannett Fleming is working with city's environmental counsel to develop a cost recovery strategy.

2017

Economic Development Department

Mr. Rebele is working with the City of South Gate Economic Development Department and their economic development consultant, Rosenow Spivasek Group (RSG,) in addressing environmental impacts associated with a historical gasoline service station. Mr. Rebele and his team were retained to take over all aspects of the assessment and cleanup activities from a prior consultant due to a stalled remedial program.

2015-2016

Operational Transition/Environmental Compliance

Project Principal for an operational transition project involving all aspects of environmental compliance as Bombardier took over rail service and maintenance responsibilities for all rail facilities from the prior operators of the North County Transit District (NCTD) facilities at the Escondido and Oceanside yards. Work involved initial consultation, environmental compliance audits, permitting, preparation of spill prevention control and countermeasure (SPCC) plans, stormwater pollution prevention plans (SWPPS) and environmental compliance plans for ongoing rail operations and facility maintenance.

2014->>>

Remediation of Organochlorine Pesticide Impacted Soils in Support of Residential Development

Mr. Rebele serves as the principal-in-charge for a residential development project involving the remediation of organochlorine pesticides (OCPs) and closure of historical underground storage tanks

(USTs), irrigation wells and low-level volatile organic compounds (VOCs). In his role, Mr. Rebele is served in a strategic capacity to result in a fast-track review and approval of a remedial action plan by transferring the open case file from a local oversight agency to the Santa Ana Regional Water Quality Control Board.

2014->>>
Remediation of Groundwater at Logistically Constrained Shopping Center
Mr. Rebele has been serving as principal-in-charge for a complex gasoline remediation project involving very high concentrations of gasoline at a commercial shopping center where site access precludes implementation of many traditional remedies. Mr. Rebele serves as senior technical advisor to the client's environmental counsel and is working to reduce the environmental liabilities of the property owner. Mr. Rebele helped devise a two-part strategy aimed at protecting the current tenants against indoor air intrusion through the development of vapor mitigation systems while conducting an aggressive groundwater remedial program consisting of trenching/product removal followed by in-situ chemical oxidation of groundwater.

2014->>>
Environmental Remediation Consulting in Support of Residential Development
Mr. Rebele served in a strategic consulting role for New Urban West, Inc. (NUWI) to support the redevelopment of infill properties throughout southern California. Projects have included former nursery/greenhouse areas, manufacturing operations and properties and areas impacted by fill materials. Currently executing several cleanup programs under a California Land Reuse and Revitalization Act (CLRRA) agreement with the Department of Toxic Substances Control.

2014-2017
Redevelopment Consulting and Remediation
Mr. Rebele serves as the project principal for a residential redevelopment project at a former Teledyne research and development facility and historical agricultural operation. Work has involved several phases of soil, soil vapor and groundwater investigation that included multiple degreaser locations, additional potential source areas of metals and petroleum hydrocarbons and organochlorine pesticides associated with the historical agricultural use. A soil vapor extraction (SVE) was implemented to reduce elevated concentrations of PCE to acceptable levels in order to prepare the Site for residential occupancy. The site is currently undergoing redevelopment.

RAMBOLL

ENVIRONMENT & HEALTH

MANASI CHAVAN

Senior Consultant

Manasi Chavan is an Engineer-In-Training with over six years of experience in environmental consulting. During her time at Ramboll, she has focused on the characterization and remediation of subsurface contamination in soil, soil vapor, and groundwater. She has designed, managed, and implemented site characterization programs for properties throughout Southern California. She has directed field investigations under the oversight of regulatory agencies including installation of monitoring, injection, and extraction wells, large-scale excavations and property redevelopment, soil, soil vapor, groundwater, and indoor air sampling and monitoring. Manasi has developed conceptual site models, remedial investigation reports and indoor air evaluations. Prior to joining Ramboll, she worked as a Senior Staff Engineer for Ninyo & Moore and as Staff Engineer for The Vertex Companies, Inc.

CAREER

2018-2019
Senior Consultant, RAMBOLL

2016-2018
Senior Staff Engineer, Ninyo & Moore

2012-2016
Staff Engineer, The Vertex Companies, Inc.

EDUCATION

2010-2012
Master's Degree in Environmental Engineering
University of Southern California, Los Angeles, United States

2006-2010
Bachelor's Degree in Chemical Engineering
University of Mumbai, Mumbai, India

COURSES/CERTIFICATIONS

Engineer-In-Training, 2012

PROJECTS

2018-2019

Project Co-ordination & Implementation-Characterization and Remediation

As part of RI/FS, Ramboll conducted characterization and remediation for a site location in Rancho Dominguez, California. The characterization and remediation activities consisted of soil, soil vapor, and groundwater subsurface investigations, pilot-scale tests for a soil vapor extraction (SVE) system and its associated operation and maintenance (O&M) and bioremediation consisting of injection of PlumeStop® Liquid Activated Carbon-S (PlumeStop), Hydrogen Release Compound (HRC®), and Bio-Dechlor Inoculum Plus (BDI Plus™), on-going implementation of full-scale SVE and bioremediation design, and on-going groundwater monitoring.

2018-2019

Additional Subsurface Investigation

Co-ordinated and helped manage additional subsurface investigation, including soil, soil vapor, and groundwater sampling at the property. Information and data obtained during the described investigations will be incorporated into a report for submittal to a regulatory agency and also for remediation design.

2016-2019

SVE System Installation Oversight and O&M Projects

Supervised and conducted installation oversight and associated O&M for SVE systems at several sites in Los Angeles and Orange Counties. Helped trouble shoot problems associated with SVE system operation for efficient performance. Conducted several rounds of monitoring and sampling (weekly, monthly, quarterly) activities at SVE manifold and/or at SVE well heads.

2015-2019

SVE and Groundwater Monitoring Well Installation and Sampling

Co-ordinated, supervised soil vapor and groundwater monitoring well installation at projects sites and at locations in the right-of way (ROW) throughout Southern California using a variety of drilling techniques. Prepared several different permit applications and workplans associated with well installation and monitoring from various Cities, Counties, and the State of California. Conducted and supervised sampling of wells using a variety of different equipment and techniques.

2014-2016

Excavation Project

Supervised the field work for a large scale strategic excavation and confirmation sampling project associated with residential redevelopment under regulatory oversight. Several stages of potholing activities were conducted to identify potential areas of contamination.

2012-2019

Multiple Phase I & II ESAs

Conducted, co-ordinated, and supervised several Phase I Environmental Site Assessments (ESAs) and Limited Phase II ESAs at sites throughout California, Arizona, Nevada, and Oregon, and Washington. The Phase II ESA scope included soil, soil vapor, groundwater, and indoor air quality sampling. Tasks performed on this project included historical document review, regulatory agency review, conducting geophysical surveys, drilling, logging and sampling for various media (soil, soil vapor, groundwater) using a variety of drilling and sampling techniques, installing and sampling vapor pins, setting and sampling for indoor air, workplan preparation, and report writing.

APPENDIX E
QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

LEO M. REBELE

Principal

Mr. Rebele is a Principal in the Irvine office of Ramboll, with responsibilities that include business development, client liaison, senior oversight and execution on projects involving environmental site investigation, litigation, remediation, environmental permitting and natural resource management. Experience includes the following:

- Supported private industry for more than 28 years by delivering solutions to problems involving real estate due diligence, waterfront and brownfield redevelopment, transit-oriented development, and ports/harbors and watershed-related services. Project experience has been split between managing uplands projects focusing on property transfer/redevelopment and assisting private and port clients with aquatic-related environmental issues.
- Provided high-level strategic redevelopment consulting services to municipalities and private developers in connection with the transfer and redevelopment of contaminated real estate. Clients include residential, commercial and industrial developers, land owners, attorneys, and real estate brokers. Implementing cost recovery actions by providing environmental litigation support services; designing and implementing environmental liability transfer programs including guaranteed fixed-price remediation (GFPR) contracts.
- Provided environmental litigation support services in matters involving cost recovery actions against responsible parties. Deposition and trial experience including a landmark litigation case 3000 E. Imperial v. Robertshaw Controls et al. Routinely conducts environmental forensics analyses with a specialty in compound-specific isotope analysis (CSIA). Develops and applies multi-media video and animation for purposes of trial exhibits and mediation settlement discussions.
- Managed and supervised dozens of Phase I and II environmental site assessments (ESAs) and remediation projects throughout the western United States, Canada, and Mexico; assessed sites affected by landfill materials, chlorinated solvents, heavy metals, petroleum hydrocarbons (including free product), polychlorinated biphenyls (PCBs), and strong acids; prepared site conceptual models; performed remedial investigation/feasibility studies (RI/FSs); managed the completion of human health risk assessments; and evaluated remedial action alternatives under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and ensuring compliance with the National Contingency Plan (NCP). Regulatory negotiation/site closure

experience with various jurisdictional offices of the Regional Water Quality Control Board (CRWQCB) and the California Department of Toxic Substances Control (DTSC), Orange County (California) Health Care Agency, the City and County Fire Departments of Los Angeles and the San Diego County of Environmental Health.

- Managed and provided oversight for projects involving natural resource management issues, including wetland evaluations and permitting, marine benthological studies, sediment and water quality monitoring, and underwater and eelgrass surveys. Experience has also included developing public outreach materials on behalf of private-sector clients, conducting resource mapping using Global Positioning System (GPS) software and geographic information system (GIS) technology.

EDUCATION

1994-1997
MS - Marine Resource Management (Minor, Aquatic Toxicology)
Oregon State University

1990-1994
BS - Biological Oceanography
University of British Columbia

PROJECTS

2024-present
Landfill Remediation in Preparation for Redevelopment
In 2024, Mr. Rebele assisted a developer and the City of Commerce, California in the development of a strategy that would allow for the expenditure of $6 million in funding made available by the Equitable Communities Revitalization Grant by the grant deadline, which put the receipt of the grant moneys in jeopardy as the project had been stalled for 2 years. Mr. Rebele worked with the City and their redevelopment consultant to utilize the available funds in a targeted and fast track manner, which would allow one portion of the larger Gage Avenue landfill to become useable for a potential residential or mixed-use project much sooner than the remaining areas of the landfill. The activities involved the preparation of a targeted work plan for planned excavation under a broader Remedial Action Plan for the entire landfill, fast track permitting through the South Coast Air Quality Management District, obtaining approvals from the Los Angeles Regional Water Quality Control Board, CalRecycle and the Local Enforcement agency (County of Los Angeles - LEA). Active remediation of the designated area is currently underway. Trash recovered from the landfill is being segregated from soil, rinsed, stockpile and ultimately transported off-site for disposal at a designated disposal facility.

2021-present
Van Nuys Industrial Center
Mr. Rebele has been leading the investigation and remediation of a multi-property site impacted by numerous releases of volatile organic compounds (VOCs) that have impacted soil vapor and groundwater beneath the project area. Investigation and cleanup of the site is complicated by likely contribution from off-site properties, depth of impacts (approximately 200 feet bgs) and commingling of contamination. With the remedial investigation largely complete, the project team is commencing with remediation of the most heavily impacted area of the site with the highest potential for affecting groundwater. Other ongoing activities will focus on refining the delineation of the plume, including investigation of potential off-site sources.

2017-present

Guaranteed Fixed Price Remediation, Credit Card Manufacturer, Rancho Dominguez, California

Mr. Rebele is heading a comprehensive remedial program to remediation soil and groundwater at an industrial property under a guaranteed fixed-price remediation (GFPR) contract. The property is impacted by moderate levels of trichloroethylene and perchloroethylene in groundwater, with impacts extending off-site. Concentrations of chlorinated VOCs in soil vapor beneath the manufacturing facility were found to be very high, requiring immediate mitigation. The GFPR contract provided an option to the buyer and seller at the time of sale that took the uncertainty of the cleanup liability out of the transaction.

2016-present

Redevelopment of former ITT Site into new Industrial Complex

Lead consultant for a high-profile industrial redevelopment project in Santa Ana, California. The project involves assisting the prospective developer with the pre-bid due diligence during the seller's auction, evaluating seller's proposed remedial strategy in the context of the proposed development, performing Phase I and II environmental assessments, regulatory agency negotiation, and the design of a vapor mitigation system. Complexities in the due diligence activities include the integration of a polychlorinated biphenyl (PCB) cap into the proposed development and integrating the proposed electrical resistance heating/steam injection remedial program with client's development plans. During site development, lead the implementation of a soil management plan to address impacted soils that were not remediated by the seller. Post-development indoor air sampling is being conducted on an annual basis, along with 3rd party review of ITT's ongoing remedial obligations at the site.

2011-present

Alameda Triangle Remediation Project

For the past several years, Mr. Rebele has been working with the City of Lynwood on the redevelopment of a major brownfield site known as the Alameda Triangle. In 2022, Mr. Rebele assisted the City with the application for funding under the Equitable Communities Revitalization Grant (ECRG), which resulted in awards of $6.3 Million for investigation and cleanup of contamination. Recent activities involved the preparation of a Remedial Action Plan (RAP) to address metals and petroleum hydrocarbons in soil and VOCs in soil vapor, followed by the implementation of the RAP. A total of 44,000 tons of impacted soils were excvaated and removed off-site in preparation for redevelopment.

2024

PFAS Evaluation in Support of Property Due Diligence

On behalf of a large regional industrial developer, Mr. Rebele served as the principal in charge for a PFAS investigation conducted as part of due diligence in support of the acquison of an industrial property that had historical operations which were identified as having the potential to have contributed to a regional PFAS issue. The investigation consisted of a desktop review of nearby facilties and online databases, as well as a targeted site investigation. The project team was able to confirm that the site was not a contributor to the regional PFAS contamination, which allowed the transaction to proceed.

2020-2022

Redevelopment of City Block, Santa Monica, California

Mr. Rebele lead due diligence and remediation planning activities in support of a large redevelopment project in Santa Monica, California. Work includes conducting a Phase I Environmental Site Assessment, a pre-demolition asbestos and lead-based paint survey, environmental/geotechnical subsurface investigation, and planning the remedial program, which will be integrated with the planned redevelopment.

2018-2022

Remediation of Metals-impacted Soils, Metals Recycling Facility, Etiwanda, California

Ramboll was contracted to assist with regulatory negotiations on behalf of an industrial developer who purchased a metals recycling facility for purposes of redevelopment. Prior Phase I ESAs conducted by others failed to identify Recognized Environmental Conditions. Ramboll worked with DTSC to develop a technical scope that would satisfy the developer's schedule and DTSC requirements. Several areas of metals and PCB-impacted soil were discovered during the investigation. Due to timing constraints faced by the developer, and DTSC staff's requests to conduct more extensive testing, Ramboll petitioned DTSC management to allow the developer to conduct a self-direct cleanup as part of their grading operations, which DTSC permitted. With the understanding that a potential cost recovery action was likely against historical operators and other parties, Ramboll meticulously documented all field activities in writing and using photo and video documentation of the on-site work. Work included demolition, soil excavation, segregation of metal debris using sifting, confirmation soil sampling and ongoing South Coast Air Quality Management District (AQMD) Rule 1166 and Rule 1466 compliance. In total of 12,000 soil was excavated, segregated and hauled off site for disposal. Ramboll is currently engaged in the cost recovery aspects of this work working.

2017

Confidential Port Terminal Due Diligence

Mr. Rebele lead a due diligence and environmental compliance team in support of an acquisition of a 700-acre terminal in the Port of Los Angeles. The work involved a comprehensive assessment of current practices involving the use, storage and disposal of hazardous materials, compliance with air and stormwater regulations, and a review historical spills and cleanup activities. A Phase I Environmental Site Assessment was conducted as part of the review. A review of California Environmental Quality Act (CEQA) permitting issues was also performed to evaluate the potential for terminal expansion onto an unoccupied portion of the facility.

2017

Economic Development Department

Mr. Rebele is working with the City of South Gate Economic Development Department and their economic development consultant, Rosenow Spivasek Group (RSG,) in addressing environmental impacts associated with a historical gasoline service station. Mr. Rebele and his team were retained to take over all aspects of the assessment and cleanup activities from a prior consultant due to a stalled remedial program.

2016-2017

Environmental Oversight

Mr. Rebele served as the principal-in-charge for the environmental oversight of a sewer line replacement in an area where groundwater impacted by chlorinated volatile organic compounds (cVOCs) associated with a State Superfund site may be encountered by city workers. The scope of work involves navigating concerns of a contentious community group and ensuring the protection of City workers through the development and implementation of a field monitoring program during sewer line construction activities.

2016-2017

Implementation of Mitigation Monitoring, New Residential Development

Mr. Rebele served as principal-in-charge for a project involving implementing mitigation monitoring requirements for biological and cultural resources under California Environmental Quality Act (CEQA). Work included conducting ongoing monitoring for cultural and biological resources during disturbance of native soils during grading for a new residential development. Challenges included working with changing client schedules and interfacing with regulatory personnel to keep the project on-track on-schedule.

2016-2017

Implementation of Soil Management Plan and Soil Stockpile Profiling for Residential Development Project

Mr. Rebele served as client services manager for a project involving the redevelopment of a former foundry and iron works facility. The soils beneath the property were identified though a combined Phase I/II Environmental Site Assessment to be impacted with Cal-Hazardous levels of lead. A combination of field screening using a portable X-Ray Fluorescence (XRF) meter and confirmation soil sampling with formal laboratory analysis in order to profile soils to be exported and to establish residual concentrations in soils. Cost effective management of soils was achieved through carefully interfacing with the client's grading contractor and project phasing.

2015-2017

Innovative In-Situ Remediation of Chlorinated Solvents

Account manager for Griffon Corporation to remediate a chlorinated VOC plume in groundwater which is commingled with chlorinated solvent plumes on adjacent properties. The remediation is confounded by access restrictions associated with a storm channel and two sewer lines. In addition two distinct groundwater mounds resulting from leaks in the sewer lines are affecting the groundwater flow and distribution of the contamination. Mr. Rebele is overseeing the forensic evaluation of sources of VOCs, general strategy, remedial approach and is leading regulatory negotiations.

2015-2017

In-situ Capping of Heavy Metal Impacted Soils

For this former tool manufacturing facility (Union Fork and Hoe Company) in upstate New York, Mr. Rebele served as project principal and client service manager. The site, which has been under the oversight of the New York State Department of Environmental Conservation (NYSDEC) and Department of Environmental Health. Mr. Rebele helped Griffon negotiate a capping remedy of the heavy metals impacted soil. A significant component of the work has been negotiating with NYSDEC and DOH to eliminate a mature wooded area from the remediation area and to reduce the long-term groundwater monitoring obligations.

2015-2016

Operational Transition/Environmental Compliance

Project Principal for an operational transition project involving all aspects of environmental compliance as Bombardier took over rail service and maintenance responsibilities for all rail facilities from the prior operators of the North County Transit District (NCTD) facilities at the Escondido and Oceanside yards. Work involved initial consultation, environmental compliance audits, permitting, preparation of spill prevention control and countermeasure (SPCC) plans, stormwater pollution prevention plans (SWPPS) and environmental compliance plans for ongoing rail operations and facility maintenance.

2014

Remediation of Organochlorine Pesticide Impacted Soils in Support of Residential Development

Mr. Rebele serves as the principal-in-charge for a residential development project involving the remediation of organochlorine pesticides (OCPs) and closure of historical underground storage tanks (USTs), irrigation wells and low-level volatile organic compounds (VOCs). In his role, Mr. Rebele is served in a strategic capacity to result in a fast-track review and approval of a remedial action plan by transferring the open case file from a local oversight agency to the Santa Ana Regional Water Quality Control Board.

2014-2018

Environmental Remediation Consulting in Support of Residential Development

Mr. Rebele served in a strategic consulting role for New Urban West, Inc. (NUWI) to support the redevelopment of infill properties throughout southern California. Projects have included former nursery/greenhouse areas, manufacturing operations and properties and areas impacted by fill materials. Currently executing several cleanup programs under a California Land Reuse and Revitalization Act (CLRRA) agreement with the Department of Toxic Substances Control.

2014-2017

Remediation of Groundwater at Logistically Constrained Shopping Center

Mr. Rebele served as principal-in-charge for a complex gasoline remediation project involving very high concentrations of gasoline at a commercial shopping center where site access precludes implementation of many traditional remedies. Mr. Rebele serves as senior technical advisor to the client's environmental counsel and is working to reduce the environmental liabilities of the property owner. Mr. Rebele helped devise a two-part strategy aimed at protecting the current tenants against indoor air intrusion through the development of vapor mitigation systems while conducting an aggressive groundwater remedial program consisting of trenching/product removal followed by in-situ chemical oxidation of groundwater.

2014-2017

Redevelopment Consulting and Remediation

Mr. Rebele serves as the project principal for a residential redevelopment project at a former Teledyne research and development facility and historical agricultural operation. Work has involved several phases of soil, soil vapor and groundwater investigation that included multiple degreaser locations, additional potential source areas of metals and petroleum hydrocarbons and organochlorine pesticides associated with the historical agricultural use. A soil vapor extraction (SVE) was implemented to reduce elevated concentrations of PCE to acceptable levels in order to prepare the Site for residential occupancy. The site is currently undergoing redevelopment.

2007

Alameda Triangle Redevelopment

Provided oversight and consulting services for an 11.2 acre project comprised of 5 parcels with multiple ownerships and a history of manufacture use dating to World War II. The property uses identified including a former Witco chemical facility located on Caltrans property, a Magnetek transformer repair and refurbishment business, two auto-wrecking yards, a former railroad right-of-way, and a variety of other uses involving the manufacture and use of various chemical materials. The chemicals detected on-site during Gannett Fleming and other site investigations included organochlorine pesticides, PCBs, free product petroleum hydrocarbons in groundwater and soil, chlorinated VOCs in soil and soil vapor, heavy metals and polynuclear aromatic hydrocarbons. The City is in the process of marketing the site for development. Following a multi-media investigation involving substantial site access coordination, Gannett Fleming prepared a Site Investigation Report, Feasibility Study and a Remedial Action Plan (RAP) for the entire Site. The reports were submitted to Department of Toxic Substances Control (DTSC) for review. Gannett Fleming is working with city's environmental counsel to develop a cost recovery strategy.

2005

Brownfield Advisory and Consulting Services

Served in a strategic consulting role on behalf of the City for the remediation and brownfield planning of a 170-acre downtown core area targeted for redevelopment. Work to date has included federal and state brownfield grant procurement and execution, brownfield inventory, development of a GIS system, development of an area-wide brownfield remediation strategy, Phase I and II Environmental Site Assessments, development of multiple remedial action plans under the oversight of the Department of Toxic Substances Control, litigation support for cleanup cost recovery, and waste to energy (WTE) consulting.

NAZGOL ZANDIPOUR

Managing Consultant

Nazgol Zandipour is a Managing Consultant at Ramboll with over 17 years of experience in environmental consulting on matters of environmental due diligence, regulatory compliance, and site investigations. Her experience includes managing and performing hundreds of environmental due diligence assignments, covering numerous sites—throughout North America for a diverse array of industries, as well as commercial, institutional and multi-family residential properties. Nazgol has performed regulatory compliance reviews for industrial operations, for the purposes of due diligence and as part of detailed compliance audits. She has overseen and performed soil and groundwater investigations associated with due diligence in various geographical locations, and under various regulatory frameworks. Her experience also includes performing air permitting and providing technical litigation support.

CAREER

2007-Present
Managing Consultant, Ramboll
Conducting variety of assignments including due diligence projects, environmental compliance support and auditing, soil and groundwater investigations, air permitting, and litigation support.

2004-2007
Governmental Relations, Hunsaker & Associates
Assisted clients seeking resolutions for a variety of issues with City, County, State, and other government agencies, including special districts, Processed construction and entitlement documents through the City, County, and Water Districts, Researched as-built plans and reports along with other documents needed for design and due diligence projects, Built and maintained positive working relationships with clients, Prepared and revised exhibits using Auto-CAD.

PROJECTS

Environmental Due Diligence

Managed and prepared hundreds of environmental due diligence assignments covering a wide variety of commercial and industrial (e.g., aerospace, plating, fueling, various manufacturing) entities in the US. These assessments, which have been performed in support of real estate transactions, financing, insurance evaluations and other business transactions, have been conducted on behalf of public and private corporations, private equity partnerships, lenders, insurance companies and other financial institutions. The scope of these projects have ranged from high-level environmental reviews performed as part of multi-billion dollar transactions to standard ASTM Phase I environmental site assessments (ESAs) performed to support the purchase or sale of a single site.

Environmental Compliance for Mergers & Acquisitions

Managed and prepared environmental compliance assessments of hundreds of facilities from a wide variety of industrial sectors, including aerospace, automotive parts, electronic parts, medical components manufacturing, chemical manufacturing, metals manufacturing and fabrication, food manufacturing, pharmaceuticals, waste management, paints and coating, fire protection and safety systems manufacturing, foundries, and numerous other commercial and industrial facilities throughout the United States and Mexico. The compliance reviews included evaluation of various compliance areas such as air emissions, stormwater, wastewater, hazardous and non-hazardous waste, greenhouse gas emissions, drinking water withdrawal, and chemical inventory reporting.

Environmental Compliance Auditing

Conducted environmental compliance audits for various manufacturing facilities including, but not limited to data centers, fire protection and safety systems manufacturing, vehicle parts manufacturing, chemical manufacturing, and food manufacturing. The compliance evaluations included review of compliance with South Coast Air Quality Management District (SCAQMD), California Air Resources Board (CARB), Department of Toxic Substances Control (DTSC), California Water Quality Control Board (CWQCB), and other local environmental agencies.

Environmental Compliance Support

Evaluated chemical inventories, prepared Hazardous Material Business Plans (HMBPs) for various industrial facilities within California and worked with the local Certified Unified Program Agency (CUPA) to submit those HMBPs via California Environmental Reporting System (CERS). In addition, evaluated waste disposal practices and audited outgoing waste from retail stores and compiled applicable compliance information regarding appropriate waste disposal.

Air Quality

Prepared a number of South Coast Air Quality Management District (SCAQMD) RECLAIM Quarterly Certification of Emissions Reports (QCERs), Annual Permit Emissions Program (APEP) Forms, Title V permits, Annual Emission Reports (AERs) (for various facilities in California and one facility in Illinois), and utilized SCAQMD AER online reporting tool to report emissions.

Phase II Investigations and Field Experience
Managed numerous subsurface investigation activities involving soil, groundwater, soil vapor, and indoor air quality samplings. In addition, conducted field investigations involving collection of soil, water, and soil vapor samples. Performed additional fieldwork including soil excavation, groundwater sampling, well development, and well abandonment. Coordinated and conducted quarterly groundwater monitoring at various residential, vacant, commercial, and industrial locations to characterize movement of chromium, volatile organic compounds, and other chemicals. Prepared Phase II reports and assisted in database management for a groundwater, soil, and soil-gas investigation involving volatile organic compounds and petroleum products contamination. Conducted drinking water sampling for the potential presence of lead at various residential apartment complex in Southern California.

Litigation Support
Provided technical support in various litigation projects regarding volatile organic compounds and petroleum product contamination.
Areas evaluated included Phase I and II investigations, remediation efforts, and the current regulatory status of the facilities. Assisted in the design, development, and management of a comprehensive discovery document database consisting of over 1,000 documents. Reviewed and summarized documents produced by regulatory agencies and organized those documents in support of case strategies. Assisted in the compilation and analysis of various relevant data, including soil and groundwater contaminant data. Conducted Internet searches for available regional studies and obtained meteorological data.
